Indian Finance

Reserve Bank Supplement

OCTOBER, 1933. | PRICE Rs. 2.

GOVERNMENT OF INDIA

POST OFFICE
CASH CERTIFICATES

Rs. 10 for Rs. 8¼
after five years

A return of 4 per cent. *Compound Interest*
Free of Income-Tax

Repayble in Cash whenever desired with interest after one year

MAXIMUM HOLDING IN ANY ONE NAME

Rs. 10,000

Get the Cash Certificate habit and set aside a regular sum every month.

Cash Certificates previously issued and maturing on and after the 1st June, 1933, may be held for a further period of five years after maturity. The amount payable on a Cash Certificate of Rs. 10 denomination at the end of this extended period of 5 years will be Rs. 12-4.

Enquire for further particulars at any Post Office.

IMPERIAL BANK OF INDIA

BANKERS TO THE

GOVERNMENT OF INDIA

INDIA NEEDS A CENTRAL BANK BUT WHAT KIND ?

Of great significance to national finance and economy are the kind of monetary standard in force, the machinery created for the working of that standard, and the ratio at which the domestic currency is to be linked to international currencies. The Reserve Bank, to the consideration of which this *Supplement* is devoted, necessitates a clear understanding of the fundamentals of these three factors, namely, the monetary standard contemplated, the banking institution to which the working of the standard is to be entrusted, and the ratio at which the rupee is to be linked to sterling.

So far as this question of a standard is concerned, the Preamble suggests that it were best "to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures." For the time being, it is expedient, we are told, to make tentative provisions on the basis of the existing monetary system.

We are asked to believe that India has no choice in this matter; that she had to make the best of a bad situation; and that the continuance of the present system is the best under the circumstances. We are given the hope that at some future date and in some future contingency, the question of the monetary standard best suited to India should be taken up for consideration.

The fact of the matter is that India has never been allowed to have a say on the question of the standard best suited to her. She has had to put up with whatever standard was deemed good for her by the Government or their advisers. She has never been allowed the standard for which she has been, for endless years, clamouring. The result is that after various promises and abortive efforts and vicissitudes, we have been jogging along on what is generally described as the sterling exchange standard.

To understand what exactly the sterling exchange standard is and what kind of affinity or relationship it bears to the gold standard, it will be useful to examine the question of monetary standard in some detail.

There are various forms and manifestations of, and differing shades and degrees in, gold standard. There is, firstly, the good old orthodox Gold Standard with gold currency. This system is, for all practical purposes, obsolete; and barring instances like Switzerland and Holland where coins do circulate even now in a small measure, gold currency in circulation is deemed impracticable, wasteful and inadvisable in to-day's economic conditions of the world. Till a year or two ago, America had certainly enough gold to enable her to have gold coins if there were public demand for them; but the general taste for jingling coins had yielded place to the vogue of crisp notes. In fact, "yellow backs", that is, dollar notes for which full percentage of gold backing was provided, should be considered in effect as note coins in circulation. A gold standard with gold currency, which may be described as the purest and completest type of gold standard, is, thus, a thing of the past; and save for a still lingering fondness in the French masses and for the unsatisfied longing of Indians for gold coins, this system of currency has but a mere historical interest.

There is, secondly, the Gold Bullion Standard. The currency authorities undertake to deliver gold against notes, only if the demand is above a prescribed minimum.

This is the system which was adopted by Britain when the pound sterling was re-equated to gold in 1925. That so great and powerful a financial country as Britain was content with a gold bullion standard was responsible for investing this system with importance and dignity. When, later on, leading countries like France and Japan stabilised their currencies on a gold basis, they also adopted the gold bullion standard. If a gold standard with gold currency may be described as a hundred percent gold standard, gold bullion standard represents seventy-five percent gold standard.

Thirdly, the scheme of Gold Exchange Standard is significant as having found the largest number of adherents amongst those countries which re-established their currencies on a gold basis in the post-war period. The currency authorities under this system maintained the necessary gold reserve partly in gold and partly in securities of countries on a gold standard. The paper notes of countries on a gold exchange standard are exchangeable either into gold or, at the option of the currency authorities, into gold exchange, that is, currency of anyone of a specified number of gold standard countries, so that with foreign "gold currency" thus obtained against domestic notes, the owner of the latter may, if need be, convert such foreign currency into gold as the country concerned should, presumably, be one which has imposed upon its currency authority the obligation to redeem notes with gold. Thus, the currency of the gold exchange standard country is convertible into gold but not necessarily directly. This system was strongly recommended by the Economic Committee of the League of Nations as most conducive to the economic use of gold. But the events following the abandonment of the gold standard in Britain in September 1931, and the resultant losses suffered by central banks in their sterling balances, would appear to be the death-knell of the gold exchange standard as a currency system. Gold exchange standard may be put down as fifty percent gold standard.

There is, next, the attenuated gold exchange standard, whereunder the currency authorities undertake to pay against paper notes the currency of any one gold country specified by itself. If the foreign currency payable be franc, then the system in vogue would be called franc-exchange standard; if guilders, it will be called guilder-exchange standard, and so on. This kind of limited exchange standard can be passed as only twenty-five percent. gold standard.

So long as sterling was linked to gold, that is, up to September 21, 1931, the sterling exchange standard meant an attenuated gold exchange standard as described in the above paragraph. It could have, then, passed for twenty-five percent. gold standard. Now that sterling is divorced from gold, sterling exchange standard in the new circumstances could not be described as gold standard in any form or degree.

So far as India is concerned, Section V of the Currency Act of 1927, which is the relevant law in force, imposes upon the Government the obligation to sell gold or, at their option, sterling when demanded at rates therein fixed. Option in regard to the delivery of gold or sterling is not with the buyer but with the Government. And during all these years, the Government have exercised this option in favour of sterling and sterling only. Up to September 1931, India had a sterling exchange standard which yet belonged to the family of gold standard. Since the de-linking of sterling from gold, the Indian monetary standard has no connection with gold.

India has, all along, been clamouring for the bread of gold standard but the Currency Act of 1927 gave her the stone of a sterling exchange standard. When it was pointed out that the stone was not of any use, the reply was vouchsafed that India might not get hungry at all and might not require bread under any circumstances; and that, in any case, this particular stone had certain magical property and could, when need arose, change into soft, healthy, delicious bread.

India was not prepared to believe in such magical properties. India wanted just simple, honest bread, that is, just simple, honest gold standard. She wanted a gold standard because she believed and rightly, that gold standard was a kind of monetary system which was least susceptible to manipulations. The main objection to sterling exchange standard has been that it perpetuates a system of what is called managed currency. Managed currency is really a euphemism for manipulated currency. India's standard has not, in various stages, functioned properly but just limped along because it has always been subject to manipulations.

Through decade after decade, ours has been a manipulated currency system. We may derive some consolation from the thought that, to-day, most countries have only manipulated currency systems. From this point of view, we cannot object to the continuance of the system of sterling exchange standard now in force till the time arrives when conditions in international finance are more settled and warrant the consideration of the Indian problem with some measure of definiteness and finality. For the continuance of the present system as a tentative measure, we can have no objection. We are prepared to admit, in fact, that there is no alternative. But are we quite sure, can we be quite sure from the experience of the past, that when the time arrives for the undertaking of more permanent measures, our authorities will act with promptitude and on right lines?

THE MONETARY STANDARD—A RETROSPECT

From this point of view, past experience is far from encouraging. Apart from the demands that have been put forward, from time to time, by the Indian public, the results of some of the currency enquiries must have led to the adoption of recommendations which should have greatly led to the satisfaction of the public demand. Whenever the recommendations arising from currency investigations were in accord with what Indians were asking for, the Government did not show any anxiety to take steps on the lines of such recommendations. On the other hand, when recommendations of currency committees or commissions were diametrically opposed to Indian opinion, the Government showed great alacrity in giving effect to measures of this kind.

A study, from this standpoint, of the various currency committees that were at work in the past and of the actions taken by the Government in respect of such reports makes most painful reading.

As regards the establishment of gold standard with gold currency, at least two committees made definite and satisfactory recommendations. No action was taken by the Government. But so far as the ratio was concerned, two enquiries resulted in recommendations which elicited the strongest opposition from the Indian public. In both these cases, immediate action was taken by the Government.

In the years following 1893, the Government of India themselves were driven to the conclusion that gold standard with gold currency was essential and inevitable in India. On the eve of the Fowler Committee, they did not hesitate to express the opinion that "the only state of things which can be called a thoroughly satisfactory attainment of gold standard is one in which the gold coins which represent our standard are those also which are good for payment in England." As a matter of principle, therefore, the Government of India favoured gold standard with gold currency.

The Fowler Currency Committee definitely laid down that steps should be taken "to proceed with measures for the effective establishment of a gold standard." From the side of the Secretary of State, it was represented that, in view of "the hoarding habits of the natives of India," gold currency would give a direct encouragement to the hoarding of gold. "If gold coins were passed into the currency, it would be at first almost like pouring water into a sieve." This question was carefully examined by the 1898 Committee. This is their conclusion :

> "Moreover, the introduction of a gold currency into India would not be an untried experiment. As has been shown above, gold coins were in common circulation in India generally within living memory, and were expressly stated in 1806 to form the principal currency and money of account of Madras. If hoarding did not render a gold circulation an impossibility in the past, we look for no such result in the future. Consequently, we are of opinion that the habit of hoarding does not present such practical difficulties as to justify a permanent refusal to allow India to possess the normal accompaniment of a gold standard, namely, a gold currency."

This was the definite recommendation of the Fowler Committee. It is not this recommendation which appealed to the Government. Action was taken on the plan submitted by one Mr. A. M. Lindsay. Mr. Lindsay's ingenious scheme was termed an exchange standard and may be taken as the precursor of the gold exchange standard as we have known it more and more prominently since the last decade. It was on Mr. Lindsay's scheme that a kind of sterling exchange standard was adopted in spite of the opinion of the Fowler Committee that the adoption of Mr. Lindsay's scheme would check that flow of capital to India upon which her economic future was greatly dependent. Not only was the authoritative view of the Fowler Committee against the exchange standard but responsible witnesses like Lord Rothschild, Sir John Lubbock and Sir Samuel Montagu stated categorically, before the Committee, that any system without a visible gold currency would be looked upon with distrust.

Between 1898 and the Royal Commission of 1914, no whole-hearted effort to adopt the recommendations of the Fowler Committee was made. The Chamberlain Commission, on their part, gave a kind of white-washing to the remissness of the Government in regard to the recommendations of the Fowler Committee in favour of gold standard with gold currency. At the same time, Mr. Austin Chamberlain and his colleagues definitely laid down that the Government should aim "at giving the people the form of currency which they demand, whether rupees, notes, or gold, but the use of notes should be encouraged." The following two recommendations are noteworthy :

> A mint for the coinage of gold is not needed for purposes of currency or exchange, but if Indian sentiment genuinely demands it and the Government of India are prepared to incur the expense, there is no objection in principle to its establishment either from the Indian or from the Imperial standpoint; provided that the coin minted is the sovereign (or the half-sovereign); and it is pre-eminently a question in which Indian sentiment should prevail.
>
> If a mint for the coinage of gold is not established, refined gold should be received at the Bombay Mint in exchange for currency.

It was also laid down that the authorities should aim at keeping one-half of the total reserve in actual gold. These recommendations were also not acted upon.

Then came the Babington Smith Committee, which made the preposterous sugges-

tion of the two shilling ratio. Everyone realised that this suggestion was preposterous. But not the Government. They took steps to stabilise the rupee on the basis of two shillings. For six months, enormous resources were frittered away for the bolstering up of an impossible ratio. After the wasting of over £50 million, the Government threw up their hands and confessed their inability to maintain the ratio.

Likewise, the recommendation of the Hilton-Young Commission in favour of an eighteenpence ratio led to quick and prompt action on the part of the Government. For the maintenance of this ratio, which was considered by the Indian public as totally untenable and highly injurious to national interest, a relentless policy of deflation was pursued; contraction of currency was carried out with vengeance; artificial monetary stringency had to be induced in the market; furious borrowings at fantastic rates were the result. The Government did not mind all this; nor did they care how adverse developments of this kind were inflicting serious harm on Indian trade, industry and agriculture. They had made up their mind to maintain the rupee on the basis of a parity of eighteenpence gold. For them there was no going back. It was a question of prestige. It was also a question of the authorities in India being given no discretion of their own by the India Office.

It was only in September, 1931 when England went off the gold standard, that the rupee had also to be divorced from gold. The rupee on a basis of eighteenpence gold was dead as mutton as from September, 1931. The Government felt, however, that their prestige was left intact by the ratio continuing at eighteenpence, the emphasis to them being the link to sterling at this rate, whatever the link to gold might be.

Such is the past currency history of this country. Whenever any wholesome recommendation was made by responsible and authoritative currency commissions for the establishment of a monetary standard and authoritative currency commissions for the establishment of a monetary standard best suited to India, the Government showed the utmost indifference. On the contrary, all the recommendations for tampering with the ratio in a way prejudicial to India evoked zeal and speedy action. Can we expect, from a Government with such a past, the adoption of timely and wholesome measures for the inauguration of a permanent monetary standard as and when international conditions show improvement?

Let us look over the events of the immediate past. Since England and India went off the gold standard, England has acquired enormous quantities of gold while India has parted with enormous quantities of gold. Gold shipments from this country in the past twenty-four months exceed £130 million. In the same period, Britain had strengthened her gold reserves to the extent of £60 million in the reported stocks of the Bank of England, and to a much higher extent in the shape of gold that has been acquired on behalf of the Exchange Equalisation Fund. Our own estimate is that the gold thus acquired during this period should be in the vicinity of £150 million valued not at current price but at the old parity. Taking the Bank of England's gold and the gold accumulated in the Exchange Equalisation Fund, the total might be easily £300 million, which, on re-valuation at the time of the adoption of the new parity of sterling, might come to £450 million. Such is the impregnable position which England has built up since she went off the gold standard.

What has India done in the meantime? She has gaily shipped, week after week, substantial quantities of gold. Sir George Schuster, when pulled up about this, said that it is best for India and for the world that all this gold is being exported. He believes that it is folly on the part of India to buy gold while the very future of the international gold standard is uncertain. India should prefer to be in the wrong with the British monetary authorities rather than in the right with her Finance Member.

In other words, while Britain has been taking all possible steps to shorten the period of tentative monetary arrangements and to facilitate the early adoption of the gold standard on a far stronger basis than ever before, India has been content with a policy of drift. If the Preamble to the Reserve Bank Bill means nothing more than words, we should like to know from the Government what steps they propose to take, by way of strengthening our gold reserves, to enable India to be ready and equipped for the adoption of such monetary standard as may be considered and decided on when the international monetary position has become sufficiently clear. If it is admitted that the existing system is only a temporary provision and that we have, sooner or later, to adopt permanent measures, have the Government to do nothing but sit still, to facilitate the transition from the temporary to the permanent stage?

It is no use accepting the facile dictum of the Finance Member that our reserves are ample. They may be sufficient—we do not even admit this—for the temporary arrangement that we are now to put up with. They are obviously inadequate for the permanent arrangement that must be made later. Sir George Schuster must indicate clearly what the attitude of the Government of India will be as regards gold exports and as regards the acquisition of gold for the strengthening of the currency reserves.

THE "WHY" OF A CENTRAL BANK

In an earlier context, we said that India's standard did not, in various stages, function properly because an exchange standard is always subject to manipulation. Such manipulation is all the more serious, and beset with more harmful results in India, as the administration in this behalf is in the hands, not of a competent central banking authority as in other countries, but of departmental officials. The Controller of the Currency, who is mainly responsible for the administration of the Indian Currency Department, is recruited, in the generality of cases, from the ranks of the Indian Civil Service. He has to learn aught of finance and currency only at a later stage in his official career. He has no direct or intimate knowledge with the money or other markets. However clever the men in the Heaven-born service may be, it is unthinkable that an official who is, for all practical purposes, an amateur, can be left in charge of the working of the currency standard.

It is not the Controller of the Currency's fault that his management of currency has always been condemned as manipulation. It is a wrong system in which a departmental official without proper training, equipment and experience is asked to look after affairs of a department in which great skill and insight, correct instinct and ready judgment are required. An urgent reform from this point of view is, therefore, the transfer of currency administration from departmental officials to a central banking institution in which the staff are competent and skilled in this matter.

Let us, in this context, pose these questions: Do we need a Central Bank? Have we the conditions necessary for the starting of such a Bank?

If we are to answer these queries, let us forget that there is a White Paper. Politics have nothing to do with this question. We have, for ever so long, needed a Central Bank. For over thirty years, the need of an institution of this kind has been discussed by the Government, by various committees of enquiry and by the public. Reforms or no Reforms the question is purely one of economics. Whatever the situation, whoever runs the country, we need a central bank. Even if the Government were manned and would continue to be manned entirely by Britishers, we require such a bank on sheer economic grounds.

In India, money transactions have been conducted from time immemorial. She has throughout financed effectively her internal trade and agriculture. But what India has wanted all along is the machinery of a Central Bank to mobilise the immense resources which are now being utilised on parochial, crude, unrelated and wasteful lines.

But whether or not it is relevant, British authorities have laid down that such a Bank is a preliminary to Federation and Central Responsibility and that the satisfaction of certain conditions is preliminary to the setting up of the Bank. These conditions are:

(1) The budget must be balanced.

(2) Short-term debt must be funded and early loan maturities converted into long-term maturities.

(3) Sufficient sterling and gold reserves must be built.

(4) A normal export surplus should be assured.

As regards the first, the budget is already balanced. If we have differences of opinion in this matter and hold that the budget is not balanced as it should be, we know that it can be balanced and we can give alternative methods. But that is beside the point. For, it may be assumed that the first condition is fulfilled.

As for the second, real progress has been achieved and, despite bungling in the last effort, there is every favourable condition for completing the programme.

As regards sterling and gold reserves, it is difficult to believe in the *bona fides* of this condition when every effort has been made *not* to strengthen the reserves. However, in spite of the Government, we have now very much more of gold and sterling securities than before, sufficient, certainly, for immediate purposes.

The fourth condition pertains to export surplus. To let a normal assured surplus of Rs. 50 crores to Rs. 70 crores per annum to sink to a level in which merchandise surplus is practically non-existent, hardly speaks well of the policy of the Government. It is difficult to believe that such policy is inspired by truly national economic interests. If one takes up a Government publication like the monthly volume of Sea-borne Trade, one is painfully struck by the fact that the first place is given to imports and not exports. This shows the bias of the authorities. It is idle to hope for export surplus until that mentality is changed. Gold exports will not last eternally. They will dry up one day. It is time the Government realise that they must get rid of this bias in their economic policy—the bias in favour of imports.

Here is India with absolute monopoly in jute and shellac; as near a monopoly as possible in commodities like hessian, myroblam, chrome, and goatskin; and partial but fairly effective monopoly in commodities like coffee, copra, rice and even tea. There is substantial world demand for these. That such a country should not have export surplus or only an anaemic export surplus is positive proof

that there is something wrong with the people who are looking after the economic interests of the country. On an appreciation of the full implications of all that Economic Planning stands for, there is, certainly, a way by which our primary products can be assured of better prices, resulting in improved trade balance, steadier exchange, and greater purchasing power of the masses. And, after all is said and done, the masses can keep buying foreign goods only if there be surplus on international account.

Therefore, the position, in broad terms, comes to this: Even the conditions which the British authorities have laid down are more or less fulfilled and we can have a central bank to-morrow. We do not, we repeat, agree that these conditions are essential preliminaries to its inauguration. Examine the test which the League of Nations applied when, roundabout 1925, it undertook the monetary reconstruction of countries with war-wrecked currencies; it gave a central bank to create these conditions and not because such conditions already existed. In fact, those conditions did not exist. However, we are to cope with political prejudices and bias as against India. But, even so, India stands more firmly than any other country to fulfil the so-called preliminaries.

This brings us to the real question: Why do we want a Central Bank?

We want a Central Bank because, as we have said, we do not agree to the administration of currency being in the hands of departmental officials. Barring an exception or two, these officials are drawn from the Indian Civil Service. Imagine a man trying a dacoity case in the Mymensingh district or supervising the settlement operations in Motihari being suddenly pitch-forked into a position where he has to learn all about controlling currency. Most of our currency troubles are due to amateurishness on the part of officials who, admittedly able, cannot, however, be expected to have the instinct to "smell" the money market and say what is coming. That aptitude comes only with daily and early touch with banks and the money market.

And, after all, what is meant by the money market? In one part of the year, the Government take away money from the market in the form of taxes and distribute them over the year as disbursements to the money market in the form of salary and public expenditure. This means that there would be too much money in one part of the year and too little in the other. It is essential, that throughout the period when the Government draw funds by way of taxes, this money should still be available to the market. In other words, no money market can function well unless there is unification of currency and credit, which means that the authority which issues currency and the authority which holds Government balances should be one and the same. There must be inflow and outflow from a common pool according to time and conditions.

Then, there is gold which is the basis of currency. There is currency which is the basis of bank credit. If one has a thousand rupees, he keeps only Rs. 20 in currency with himself and the remaining Rs. 980 is deposited with a bank. And the bank is using this Rs. 980 to finance such others as need financing. In other words, for that credit of Rs. 980, the basis of currency is only Rs. 20, and the basis of this currency is only Rs. 7 in gold. If, however, people lose confidence in the banking system, the Rs. 980 will be, in large part, withdrawn from the bank and hoarded as currency. There would be contraction of bank credit and expansion of demand for currency, with the result that more gold will have to be found. Gold is the reserve which a Central Bank maintains for its currency; currency is the reserve which banks maintain for the total banking credit. It is essential that suitable machinery should exist with a view to keep the market well-poised so far as reserves, credit and currency are concerned.

Again, this bank should be able to issue additional credit if banks offer suitable security. Banks will have suitable security if trade is brisker and businessmen have larger and larger recourse for accommodation. At the same time, the Central Bank should be able to defeat any conspiracy which other banks may enter into to create money conditions opposed to the policy and objective of the Central Bank. In that case the Central Bank can lend direct to the market and nullify the effects of that conspiracy.

Let up sum up:

We want a Central Bank because we want such transactions of the Government as pertain to the market to be carried out by an agency which knows its business.

(2) We want a Central Bank because there must be unification of currency and credit.

(3) We want a Central Bank because we want an institution which will, on the one hand, extend necessary and adequate facilities to banks and provide currency in a way that supply balances demand and, on the other, regulate and exercise discipline over other banking institutions so that the public will have an assurance that banks are being closely watched and are, therefore, obliged to do business on wholesome lines.

All of which means that such a bank is a Government bank or a Bank of Issue or a Bankers' Bank according to the point of view or emphasis.

TREASURY OPERATIONS, TOO, REQUIRE A CENTRAL BANK

Between the Government's monetary, currency, financial and taxation policy, and the financial world, there is close contact and link. Taxation and budgetting are but a close part of the activities of the Finance Department of the Government of India. In India, it is the Government that are the currency authority whereas, in other countries, the note issue is managed by a Central Bank. The Government in this country are in the nature of bankers to the Railway Department and the Provincial Governments. They have Postal Savings account and issue Postal Cash Certificates. These banking activities cause the diversion to the Treasury of considerable sums from the capital market. The Government have to arrange for the financing of the Secretary of State by remittance of funds from India. External obligations, which are a heavy responsibility, entail operations having a profound influence on the money market and exchange in particular.

As regards the significance of Government's finance to the money market, we must take into account certain outstanding factors. Considerable sums of money have to be remitted to the India Office to meet the Home Charges. The estimates of the remittance programme have, in recent years, tended to come down. In the last financial year, the programme was for a remittance of £24½ million; in the current year, the estimate is £20 million. The remittance of so large a sum through the open market has, necessarily, a considerable influence on the trend and temper of exchange.

In the second place, the Government being the currency authority can contract or expand currency at their sweet will and pleasure. They can, therefore, exercise an important influence on the money market.

Whether Treasury Bills are issued at high rates or low rates would determine whether the money market would have tight or easy conditions. It is, within reasonable limits, entirely in the hands of the Government to shape their short-term borrowing policy in such a manner that they get their requirements at competitive rates. If they lost their grip in this regard, they would have, inevitably, to pay higher rates; and the money market would suffer by experiencing a stringency which need not be there.

But even more striking is the part which the Government play in the fortunes or misfortunes of the Indian giltedge and capital markets. If the Government have an unscientific or uneconomical credit policy and if they do not show sufficient care in regard to their long-term borrowings but go on increasing their borrowing rate in the facile hope of getting larger amounts, what would happen would be that the existing securities in the market would depreciate in the process of adjustment to the higher interest yield on the new securities. This would cause a corresponding depreciation in all fixed interest bearing securities of public bodies and industrial concerns. If fixed interest bearing securities have to offer more attractive terms, equity shares or ordinary shares would have also to be made correspondingly more attractive to investors.

As it is situated now, the Government have operations and transactions which have repercussions in the exchange, money, giltedge and capital markets and which are of such size and weight that according as such transactions are carried out in a wholesome manner or not, the effect on the market is wholesome or otherwise.

It is, therefore, of the utmost importance that in the case of a Government which have to put through transactions of such size and weight, the authority to guide and inspire these transactions must be one having a thorough knowledge of the exchange, money, giltedge and capital markets. Such a competent authority is a central banking institution.

BUT WHAT TYPE OF CENTRAL BANK?

We have, we believe, made out a case for a Central Bank which is a Government's Bank, a Bank of Issue and a Bankers' Bank. But do we need a Central Bank which is also a Reserve Bank?

It is now necessary to examine what are the distinctive features of a central bank which is also a reserve bank. The main function of a central banking institution is to maintain the integrity and stability of the domestic currency system and of the domestic credit position, and to maintain the ratio of domestic currency with international currency on a specified basis. For the discharge of this task, the Central Bank initiates, from time to time, such monetary policy as it deems best. It should have the power not only to initiate a policy but also to enforce

that there is something wrong with the people who are looking after the economic interests of the country. On an appreciation of the full implications of all that Economic Planning stands for, there is, certainly, a way by which our primary products can be assured of better prices, resulting in improved trade balance, steadier exchange, and greater purchasing power of the masses. And, after all is said and done, the masses can keep buying foreign goods only if there be surplus on international account.

Therefore, the position, in broad terms, comes to this: Even the conditions which the British authorities have laid down are more or less fulfilled and we can have a central bank to-morrow. We do not, we repeat, agree that these conditions are essential preliminaries to its inauguration. Examine the test which the League of Nations applied when, roundabout 1925, it undertook the monetary reconstruction of countries with war-wrecked currencies; it gave a central bank to create these conditions and not because such conditions already existed. In fact, those conditions did not exist. However, we are to cope with political prejudices and bias as against India. But, even so, India stands more firmly than any other country to fulfil the so-called preliminaries.

This brings us to the real question: Why do we want a Central Bank?

We want a Central Bank because, as we have said, we do not agree to the administration of currency being in the hands of departmental officials. Barring an exception or two, these officials are drawn from the Indian Civil Service. Imagine a man trying a dacoity case in the Mymensingh district or supervising the settlement operations in Motihari being suddenly pitch-forked into a position where he has to learn all about controlling currency. Most of our currency troubles are due to amateurishness on the part of officials who, admittedly able, cannot, however, be expected to have the instinct to "smell" the money market and say what is coming. That aptitude comes only with daily and early touch with banks and the money market.

And, after all, what is meant by the money market? In one part of the year, the Government take away money from the market in the form of taxes and distribute them over the year as disbursements to the money market in the form of salary and public expenditure. This means that there would be too much money in one part of the year and too little in the other. It is essential that throughout the period when the Government draw funds by way of taxes, this money should still be available to the market. In other words, no money market can function well unless there is unification of currency and credit, which means that the authority which issues currency and the authority which holds Government balances should be one and the same. There must be inflow and outflow from a common pool according to time and conditions.

Then, there is gold which is the basis of currency. There is currency which is the basis of bank credit. If one has a thousand rupees, he keeps only Rs. 20 in currency with himself and the remaining Rs. 980 is deposited with a bank. And the bank is using this Rs. 980 to finance such others as need financing. In other words, for that credit of Rs. 980, the basis of currency is only Rs. 20, and the basis of this currency is only Rs. 7 in gold. If, however, people lose confidence in the banking system, the Rs. 980 will be, in large part, withdrawn from the bank and hoarded as currency. There would be contraction of bank credit and expansion of demand for currency, with the result that more gold will have to be found. Gold is the reserve which a Central Bank maintains for its currency; currency is the reserve which banks maintain for the total banking credit. It is essential that suitable machinery should exist with a view to keep the market well-poised so far as reserves, credit and currency are concerned.

Again, this bank should be able to issue additional credit if banks offer suitable security. Banks will have suitable security if trade is brisker and businessmen have larger and larger recourse for accommodation. At the same time, the Central Bank should be able to defeat any conspiracy which other banks may enter into to create money conditions opposed to the policy and objective of the Central Bank. In that case the Central Bank can lend direct to the market and nullify the effects of that conspiracy.

Let up sum up:

We want a Central Bank because we want such transactions of the Government as pertain to the market to be carried out by an agency which knows its business.

(2) We want a Central Bank because there must be unification of currency and credit.

(3) We want a Central Bank because we want an institution which will, on the one hand, extend necessary and adequate facilities to banks and provide currency in a way that supply balances demand and, on the other, regulate and exercise discipline over other banking institutions so that the public will have an assurance that banks are being closely watched and are, therefore, obliged to do business on wholesome lines.

All of which means that such a bank is a Government bank or a Bank of Issue or a Bankers' Bank according to the point of view or emphasis.

TREASURY OPERATIONS, TOO, REQUIRE A CENTRAL BANK

Between the Government's monetary, currency, financial and taxation policy, and the financial world, there is close contact and link. Taxation and budgetting are but a close part of the activities of the Finance Department of the Government of India. In India, it is the Government that are the currency authority whereas, in other countries, the note issue is managed by a Central Bank. The Government in this country are in the nature of bankers to the Railway Department and the Provincial Governments. They have Postal Savings account and issue Postal Cash Certificates. These banking activities cause the diversion to the Treasury of considerable sums from the capital market. The Government have to arrange for the financing of the Secretary of State by remittance of funds from India. External obligations, which are a heavy responsibility, entail operations having a profound influence on the money market and exchange in particular.

As regards the significance of Government's finance to the money market, we must take into account certain outstanding factors. Considerable sums of money have to be remitted to the India Office to meet the Home Charges. The estimates of the remittance programme have, in recent years, tended to come down. In the last financial year, the programme was for a remittance of £24½ million; in the current year, the estimate is £20 million. The remittance of so large a sum through the open market has, necessarily, a considerable influence on the trend and temper of exchange.

In the second place, the Government being the currency authority can contract or expand currency at their sweet will and pleasure. They can, therefore, exercise an important influence on the money market.

Whether Treasury Bills are issued at high rates or low rates would determine whether the money market would have tight or easy conditions. It is, within reasonable limits, entirely in the hands of the Government to shape their short-term borrowing policy in such a manner that they get their requirements at competitive rates. If they lost their grip in this regard, they would have, inevitably, to pay higher rates; and the money market would suffer by experiencing a stringency which need not be there.

But even more striking is the part which the Government play in the fortunes or misfortunes of the Indian giltedge and capital markets. If the Government have an unscientific or uneconomical credit policy and if they do not show sufficient care in regard to their long-term borrowings but go on increasing their borrowing rate in the facile hope of getting larger amounts, what would happen would be that the existing securities in the market would depreciate in the process of adjustment to the higher interest yield on the new securities. This would cause a corresponding depreciation in all fixed interest bearing securities of public bodies and industrial concerns. If fixed interest bearing securities have to offer more attractive terms, equity shares or ordinary shares would have also to be made correspondingly more attractive to investors.

As it is situated now, the Government have operations and transactions which have repercussions in the exchange, money, giltedge and capital markets and which are of such size and weight that according as such transactions are carried out in a wholesome manner or not, the effect on the market is wholesome or otherwise.

It is, therefore, of the utmost importance that in the case of a Government which have to put through transactions of such size and weight, the authority to guide and inspire these transactions must be one having a thorough knowledge of the exchange, money, giltedge and capital markets. Such a competent authority is a central banking institution.

BUT WHAT TYPE OF CENTRAL BANK?

We have, we believe, made out a case for a Central Bank which is a Government's Bank, a Bank of Issue and a Bankers' Bank. But do we need a Central Bank which is also a Reserve Bank?

It is now necessary to examine what are the distinctive features of a central bank which is also a reserve bank. The main function of a central banking institution is to maintain the integrity and stability of the domestic currency system and of the domestic credit position, and to maintain the ratio of domestic currency with international currency on a specified basis. For the discharge of this task, the Central Bank initiates, from time to time, such monetary policy as it deems best. It should have the power not only to initiate a policy but also to enforce

such a policy in the financial world. If it does not get the co-operation of other banks, it might well mean that while the policy of the Central Bank is on certain lines, the other banks are able to counteract or negative it. It is, therefore, essential that the Central Bank should be able to make its policy adhered to by the other banking institutions.

Let us take a concrete example. If the Central Bank feels, for example, that there has been far too much speculation, that this speculation should be curbed and that, therefore, credits have to be made dearer, or if it feels that domestic capital is leaving the country and must, therefore, be retained by offering an inducement of higher interest rates, it would take steps to increase the bank rate and also to reduce the volume of currency. If, at such a time, the other banking institutions lend money freely, the dear money policy of the Central Bank would be nullified. To ensure that the banks accept and follow the lead of the Central Bank, one of the devices employed is for banks being compelled to maintain in cash with the Central Bank specified percentages of their time and demand liabilities. By the control which the Central Bank exercises over the reserves of banks, it is expected that it will be able to make its policy felt by all the banks. This is the essence of a Reserve Bank, in that it is so constituted as to be able to enforce its policy throughout the country by its control over the banking reserves.

Now, the Imperial Bank of India is a Government's bank but not a Central Bank or a Bank of Issue or a Bankers' Bank or a Reserve Bank. The Chartered Bank of India, Australia and China is a Bank of Issue (so far as China is concerned), but not a Government's Bank or a Central Bank or a Bankers' Bank or a Reserve Bank. The Bank of England is a Central Bank, a Government's Bank and a bank of the money market but not a Bankers' Bank in the formal sense of the term nor a Reserve Bank. The Bank of Belgium, the Bank of Switzerland, the Bank of Holland, the Bank of Italy, the Bank of Japan, practically every central bank of importance in the world, is a Government's bank, the bank of issue and a bankers' bank but not a reserve bank.

Amongst the leading countries of the world, it is only the United States of America that has a Central Bank which, in addition to being a Bank of Issue, a Government's Bank and a Bankers' Bank, is also a Reserve Bank. The three other countries which have reserve banking systems are Africa, Chili and Columbia.

The question arises as to why, in the case of India, our authorities have not been content with the type of Central Bank that is in existence in England, throughout the Continent and Japan? How is it that they have found it necessary to incorporate one particular feature of a Reserve Bank from the model of the U. S. A.? What are the special reasons for this departure from the British and Continental models which have been kept in view in most other particular?

We have gone carefully into all the available literature pertaining to the discussions on the proposal for the Reserve Bank of India. We have not so far come across any argument which could enlighten us as to why this special type of Central Banking Institution was chosen for this country. In the Hilton-Young Currency Commission Report, the paragraph that deals with compulsory deposits by member banks with the Reserve Bank does not give any reason. The Report merely says that it is "highly desirable" that member banks should maintain such deposits. Highly desirable from what point of view? Highly desirable for what special requirements of India?

In the course of the Assembly debates in 1927 and 1928, there was no explanation offered for the inclusion of this feature. We are extremely puzzled and mysitfied on this question because we are firmly convinced that India is the last country for which a central bank which is also a reserve bank is suited. It is just this type of central bank that will not fit in with the peculiar conditions and special circumstances of India. Yet, it is this type which has been chosen. And all that we are told is that it is highly desirable.

We believe that the developments in this regard should have been somewhat as follows So far as India is concerned, the original idea was that the Imperial Bank of India tion was that the Imperial Bank of India should be entrusted with the right of note issue. As the members of the Hilton-Young Currency Commission gave more and more thought to this, they came to the conclusion that the Imperial Bank must not be disturbed in its discharge of commercial banking functions and that a new bank was necessary for looking after the note issue. They, therefore, decided to create a central banking institution for the purpose of looking after the note issue. What was this bank to be called?—this question proved somewhat teasing. The Bank could not be called the Central Bank of India for the simple reason that there was already a Central Bank of India. Nor, for the same reason, could it be called the National Bank of India or the Imperial Bank of India. Thus the selection of a name became a real difficulty. In the end, the Hilton-Young Commissioners hit upon the name, the "Reserve Bank of India." After deciding on the name, the Commissioners went about devising recommendations to justify the name.

All that was wanted was a Central Bank; but because a proper name could not be found, reserve banking functions were foisted upon it. Even from the point of view of rscerve

banking functions, the only aspect that has been assimilated in the scheme is that all banks in India with a certain minimum of paid-up capital and reserve should, without any option to themselves, become members of the reserve banking system and agree to deposit specified percentages of their time and demand liabilities.

RESERVE BANK TYPE, UNSUITED TO INDIA

The main features of a Reserve Bank system, judging from the model of America, are as follows :

(1) Only member banks can be shareholders.

(2) The banks in the country have the option as to whether they like to join the reserve system or keep out of it.

(3) Such banks as join the reserve system have to maintain in cash with the Reserve Bank specified percentages of their fixed and current deposits.

(4) The Reserve Bank maintains a machinery for the periodical examination of the accounts, books and working of the member banks, and the latter have to submit detailed reports and also afford facilities for scrutiny and check as and when required.

(5) The Reserve Bank is prohibited from doing any business which will be of a competitive nature with member banks.

If we study the provisions of the Reserve Bank of India Bill, we find that of these five features, the only feature incorporated is that pertaining to the deposit of a percentage of liabilities. If the Hilton-Young commissioners wanted a Central Bank which was also to be a Reserve Bank, they should have taken all relevant features from that system which is admittedly the most outstanding example of reserve banking. Not only did they not incorporate all the essential features but some of the provisions are actually opposed to what must be considered the essentials of a reserve bank.

In Chili and Columbia, the establishment of a Reserve Bank was based on the plan drawn up by a famous American economist. The Reserve Bank systems of these two countries adopted the essential features of the American system. A similar procedure must have been adopted by the Hilton-Young Commissioners if they really wanted to have a reserve bank in the case of India. In return for the compulsory deposit in a reserve banking system, member-banks have the inestimable privilege of being the more or less exclusive proprietors of the central banking institution. They have also the advantage of the check and scrutiny exercised by the Reserve Bank. Nor—this is most important —are all banks in the country compelled to become members of the reserve system. It is left to the banks to decide whether they will become members or not.

In other words, for most of the features of the Reserve Bank scheme, the Hilton-Young commissioners looked to the model of the British and Continental institutions. It is only in regard to the compulsory deposit that they borrowed a feature from the American system. The result is that the system as now devised will prove a hybrid and a monstrosity.

The Reserve Bank is expected to cultivate the goodwill and secure the co-operation of banks. It will start by inducing the active ill-will and evoking the rancour of all the banks in the country. This is a most inauspicious start.

But on going into the matter further, the position is even more serious and more absurd. Borrowing this particular feature from the American system, which, in our opinion, was entirely due to the desire to justify the name they had selected, the Hilton-Young Commissioners did not pause to enquire whether India was suited for a type of central bank which was also a reserve bank. If they had given careful consideration to this matter, they would have had no difficulty in arriving at the conclusion that India is the last country for which a Reserve Bank is suited. Nor would they have failed to realise that the Reserve Bank type was not altogether such a success in those places where they were tried, as to warrant its being copied in India.

In the two South American countries, the currency and banking crisis could not be prevented by the Reserve Banks. In South Africa, the Reserve Bank type was rendered a failure because of the combination of four commercial banks against it. The Reserve Bank System in the U.S.A. was introduced at a time when there were 35,000 banks in that country, when the cheque habit was more or less universal and when all the far-flung areas of the State were enjoying banking amenities. Even so, the Federal Reserve Banking System, with its insistence on member banks depositing a percentage of their liabilities, could not prevent the colossal failures of banks that have taken place in the last few years.

How is it, then, that in the case of India, a type of central banking institution is sought to be foisted which is in vogue in a bare handful of countries in the world and which could not be considered a success in most of them. This type has been preferred to the type of the Bank of Issue which has proved a success in the Continent and in other parts of the

world. A Reserve Bank is particularly a misfit in a country of the size, area and population of India. The total number of banks that could come within the Reserve system inclusive of bank branches are less than 300. The essence of a Reserve Bank is that by controlling the reserves of member banks, the central banking institution can control the monetary reserves of the population of the country. Is it thinkable that by controlling the reserves of banks which are 30 to 40 in total number and which are less than 300 inclusive of all branches, the monetary reserves of a population aggregating 350 million can be controlled?

Bank rate does not affect India beyond the three or four financial centres. The hundreds of mofussil towns and the lakhs of villages are beyond the pale of the money market centres. The monetary conditions of Bombay are different from those of Bandra. The monetary conditions of Calcutta are different from those of Serampore. Such is India. You cannot influence the upcountry parts of India by the monetary policy of a Reserve Bank. This may be an unpalatable truth, but it were folly to refuse to recognise it.

Realising this and realising that the Reserve Bank type of central banking institution is a rarity and that the Hilton-Young Commissioners themselves were, in their original plan, for a central banking institution and not for a reserve bank type of central banking institution, it is time that those now in charge of the Reserve Bank Bill understand clearly the futility and purposelessness of enforcing only one aspect of a reserve bank, namely, compulsory deposits on the part of member banks. Let it be clearly understood that you cannot make an amalgam of some features of the Continental model and some features of the American model. Follow one or the other.

We have so far looked at this matter on general economic grounds. It is also necessary to consider the practical implications of this proposal. If the Scheduled Banks have to deposit 7½ per cent. of their demand liabilities and 2½ per cent. of their time deposits, it would not mean that out of their present cash balances, the required quota could be handed over to the Reserve Bank, the banks being able to carry on with the balance as sufficient till money. We have gone through the various clauses of the Reserve Bank Bill carefully; and we do not find any section under which it would be possible for any Scheduled Banks to withdraw money from the Reserve Bank under any circumstances, barring, perhaps, liquidation of the bank. The money that will be kept with the Reserve Bank is, for all practical purposes, frozen and useless. The banks cannot consider it as cash balance available when necessary. In other words, the ratio of cash to liabilities on which Schedule Banks will have to work will remain the same as now.

Let us now understand the position clearly. Taking the exchange banks and the Indian joint stock banks, the cash percentage on which they have been working is, on an average, 18 per cent. This cash percentage will have to continue in the future. Over and above this, the Schedule Banks will have to find the cash necessary for deposit with reserve banks. This will work out to another 5 per cent. of their liabilities. That is to say, where banks have been working on a cash percentage of 18 per cent., they will now have to work on a cash percentage of 23 per cent.

To the extent that the non-interest bearing portion of their assets is increased, the earning capacity of banks will be greatly reduced. Anyone who has studied the working of banks over recent years would realise that the banking profit as such in respect of transactions in India has shrunk considerably. Negligible as is the banking profit, a big hole is to be cut into it by the considerable cash percentage that is to be maintained. This is a serious matter and we are inclined to think that at least in the case of Indian joint stock banks, profits shown in the future balance sheets would be reduced by 3 to 4 per cent. If the dividend be reduced, this is bound to cause nervousness both among shareholders and depositors. This might well lead to losses of deposits on a fairly appreciable scale.

It is obvious that the aim of the Reserve Bank is to strengthen the banking institutions of the country. We have proved that the immediate and direct result would be to weaken the banks. Instead of the Reserve Bank being friend and guide to member banks, it will prove to be an inimical and disruptive force.

There is another important consideration. How are these banks to put up the extra cash required for purposes of deposit with the Reserve Bank? We have already shown that the cash percentage which will have to be maintained in future will be the same as in the past. So far as the extra cash is concerned, it will, therefore, be necessary for the banks to sell a portion of their giltedge securities. We believe that the total of cash that will have to be paid into the Reserve Bank by all the Schedule Banks put together would be in the neighbourhood of Rs. 10 crores. Which means that a situation is bound to arise, immediately after the inauguration of the Reserve Bank, in which all the banks in the country will have to come out as sellers of government securities. The total of securities that will have to be sold will be of the order of Rs. 10 crores. Every bank would be a seller, no bank a buyer. What will be the condition of the giltedge market in such circumstances? There is no knowing what bottom giltedge would touch in such a situation. The prospect in this regard is too terrible for words.

In the usual conditions, when one bank

is a seller, some other bank happens to be a buyer. In the usual conditions, there could be nothing like a sale of so vast an amount of securities as Rs. 10 crores. When there is this conspiracy of abnormal conditions (nearly every bank will have to come out as a seller and all the banks together will have to sell securities of the value of Rs. 10 crores), this would, in all certainty, disrupt the giltedge market beyond all hope of recovery. The crisis in government securities market would prove to be one of unparalleled severity. From this point of view, we believe that so long as the market knows that member banks may have to come out as sellers of securities as soon as the Reserve Bank is started, the gilt-edge outlook must be considered extremely gloomy and increasingly alarming.

DANGERS OF A RESERVE BANK

While the harm that will ensue from the insistence on compulsory deposits from member banks is undoubted and grave, it is difficult to see where there is, at all, any compensating advantage. The idea of credit control is, if we may be pardoned a vulgarism, all bumkum. There seems little purpose in taking away money from institutions which need it and which would suffer by having to part with it and handing it over to an institution which will have otherwise plenty of funds and is itself the creator and manufacturer of money. The Rs. 10 crores and odd which the Reserve Bank would get should prove an embarrassment to it. To find the resources for paying up the percentage deposits would be an agony to the member banks. In the bargain, it may well be that the monies given away by the member banks at great loss to themselves will prove so embarassing to the Reserve Bank as to drive it to do business which might be competitive with the member banks. In other words, the member banks will furnish to the Reserve Bank the weapon with which they might themselves be hit.

For all this sacrifice which the member banks are expected to make, what will they get in return? They are to be offered rediscount facilities. Rediscount facilities in respect of what? In respect of trade bills that are non-existent? *The loss which the member banks will have to undergo is a definite and positive fact. The benefits that they are to get in return are doubtful and problematical.*

Let us bring together the relevant ideas of this important discussion :

(1) The central banking institutions of most leading countries of the world are not reserve banks.

(2) Amongst the leading countries, it is only the United States of America that has a Reserve Bank.

(3) It is difficult to understand why, in the case of India, it was decided to abandon the model of most leading countries and accept the model of the exceptional system in the United States.

(4) It is still more difficult to understand why those who sponsored the idea of a Reserve Bank failed to realise that India was the last country in which a Reserve Bank type of central banking institution could work.

(5) India has few banks and few bank branches, undeveloped banking habits amongst the populace and large tracts of the country altogether untouched by banks. In the case of such a country, to talk of controlling the monetary reserves of the population through the reserves of banks carries no sense.

(6) If this idea were insisted upon, that is, to the extent of requiring percentage deposits from member banks, the latter are bound to record a shrinkage in their profits and they will be obliged to reduce their dividends. While the Reserve Bank is supposed to strengthen the banking system of the country, it will actually be weakening it.

(7) In order to find the cash necessary for percentage deposits, the member banks will have to sell government securities to the tune of Rs. 10 crores. There should be a colossal decline in giltedge prices. The Reserve Bank is created for the ostensible purpose of maintaining and ensuring the credit of the Government; but the actual fact would be that the credit of the Government will be pulled down to the lowest depths as a result of heavy sales on the part of member banks.

In view of the above circumstances, the Government must realise that while India does want a Central Bank which is a Government's Bank, a Bank of Issue and a Bankers' Bank, it has no use for the Reserve Bank type of central banking institution. If the Government do not understand the gravity of the situation in time and if they insist on this provision being passed in the Assembly, it would mean that, immediately after the inauguration of the Reserve Bank, the two purposes for which the Reserve Bank is created would be defeated.

While the Government seek to strengthen the banking system of the country

through the Reserve Bank, it is the Reserve Bank that will disrupt the banking system. While the Government seek to enhance the credit of their securities, it is the Reserve Bank that will bring down the credit of the Government by causing the biggest debacle ever witnessed in the giltedge market.

We would, therefore, suggest that the Government should make an immediate announcement that the idea of making India's Central Bank a Reserve Bank is definitely and finally abandoned. If this one single feature is dropped, the Central Bank proposal as contained in the Bill would remain unaffected. In fact, this feature was a superimposition, an unwanted thing, a needless, purposeless and positively mischievous provision.

As it is the name which is responsible for the incorporation of a feature so obviously wrong, we would propose that the central banking institution started in India must be called the Indian Federal Bank of Issue.

ANTECEDENTS OF "STATE *vs.* SHAREHOLDERS' BANK"

The scheme as suggested in Section 4 is for a shareholders' bank with a regional plan for distribution of capital. While one can readily appreciate the Government's preference for a shareholders scheme, the present attitude of Sir Purushottadas Thakuradas, Sir Phiroze Sethna and Mr. A Rangaswami Iyengar (who were all members of the 1927 Joint Select Committee) and the attitude of their colleagues on the London Committee is difficult to understand. A Battle Royal was waged in 1927-28 on the question of Shareholders' Bank *versus* State Bank. And so far as the Assembly was concerned, it was a victory for the State Bank.

The Hilton Young Commissioners recommended a shareholders' bank.

The first draft of the Reserve Bank Bill devised the scheme on the basis of private shareholding.

The Joint Select Committee, of which Sir Sir Phiroze Sethna was the Chairman and Sir Purshottamdas and Mr. A Rangaswami were members, decided in favour of a state bank; and the Bill proposed by them and introduced in the Assembly contained a provision to that effect.

Sir Basil Blackett was in a minority on this issue. But, in the course of the Assembly debate on the Joint Select Committee's Bill, he withdrew his opposition and alrlowed section 4 to be passed, which meant that the state bank plan was passed with the consent of both the Opposition and the Treasury benches.

On August 31, 1927, Sir Basil Blackett, while reiterating that the Government were still strongly of the opinion that the shareholder plan was the one which was most suited to the solution of all difficulties and best calculated to serve India's interests in this matter, claimed that he kept a mind that was open to educative influence and could learn from wise teachers. It was evident to him "there are strong feelings on the other side and the question remains: Can we arrive at a solution if the Government of India on their part are willing to give up the shareholder plan?" He was prepared, and he agreed, to scrap the shareholder plan because he was convinced that he was doing so in circumstances "in which there is every hope that by a concession on this point alone they are secure that the Bill will finally reach the statute book in a shape acceptable to them."

At the same time, Sir Basil had every hope that solution of the directorate difficulty should be possible by a further exploration of the amendment put forward by the Opposition for electoral colleges. The Finance Member said:

> It seems to me to be a better solution than any that has hitherto been put forward, and the Government are willing to accept that solution in principle. They do not desire at this stage to tie themselves to particular details because they are very anxious that the solution that is found should be one which is acceptable very nearly unanimously to every member of the house. . . It is the Government's duty to see that this Board is, as far as possible, representative of India and that it is wellplanned and that capable people who are fit for the work and who are likely to do the work in an expert way wil be on the Board. The Government have no objection—in fact, they are in favour of the principle that a majority of the members of the Board should be Indian elected members. That being so, I do not think we ought to have any difficulty in coming to a final conclusion on this matter. It (scheme of electoral colleges) is one that appeals to the Government and that they themselves are prepared to accept. But we desire that it should be accepted with the approval of as large a majoity of the House as possible and, therefore, I think it is wise to keep open the details in order to make workable a scheme which at any rate is on the face of it attractive to a large body of this House. I do not know whether I should be regarded as doing an injury to my Honourable friend the leader of the opposition party if I were to thank him on behalf of the Government for the assistance he has given to me."

And, in finally accepting the principle of a state bank, Sir Basil with characteristic gracefulness, acknowledged that he had *"accepted in faith because I think even faith*

may be better than shareholdings in some circumstances."

From the passages referred to above, it will be clear that Sir Basil was all for sweet reasonableness. He, for his part, kept an open mind for all fruitful and wholesome suggestions from the other side. Not so the Secretary of State. At the instance of the latter, the Bill was withdrawn; a fresh Bill introduced at a later stage; and the Government forced to take an attitude, which, in conjunction with the admitted truclence of the Opposition incensed at that time by the Simon Commission affair, caused the abortion of a far more liberal scheme of a reserve bank than the one now offered.

The fact is that theAssembly, both official and non-official sides, did ratify the state bank proposal on the earlier occasion.

The next episode is the Central Banking Enquiry Committee's report unanimously recommending that the Reserve Bank should be a state bank. The Committee was presided over by Sir B. N. Mitra, an official all his life; and it was a fully representative Committee. Europen interests, exchange banks and practically every important section were well represented. There is the utmost significance to be attached to a unanimous recommendation of a committee of such a *personnel.* Let it be added that Sir Purshottamdas was not only a member of the Committee but its Acting Chairman in the earlier stages and the Vice-Chairman in the later stages.

After these happenings, one would have thought that Sir Purshottamdas and the two other members of the old Legislature and the other members of the present Legislature who attended the London discussions would have stuck to the State Bank scheme as one authoritatively supported and universally accepted. At any rate, the public had a right to expect from them an explanation for abandoning a scheme for which public approval has, time and again, been expressed in unmistakeable terms, and for according sanction to a scheme which had evoked, in all stages, strong public disapproval.

The posthumous explanation of Sir Purshottamdas is admittedly halting, laboured, unconvincing and beside the point. Strong sentiments were expected of him not after the Report was signed but in the body of the Report. The country had every right to expect the valiant fighters of 1927-28 to show equal pluck and grit in the disordered skirmish of 1933.

In 1927-28, the Government were willing to accept the state bank proposal, provided the plan for the directorate was satisfactorily decided on. The Government were also willing to admit that the Electoral College scheme was, in principle, as near a satisfactory solution as could be devised. Are the Government ready and willing to take the same stand today? Does the undertaking of the early period still hold good?

The Local Boards, which, as will be gathered from the later discussions in the *Supplement,* are to be the electorate for the Central Board of Directors, is but a mutilated and emaciated version of the scheme of Electoral Colleges, of which Mr. S. Srinivasa Iyengar, Acting leader of the Opposition at that time, was the author and which received the approval of Sir Basil. Should we not be honest about it and revive the electoral college plan in its entirety, in its original form, in its pristine completeness.

We recommend it to the careful study of our legislators in the hope that, even now, it is not too late to instal it in the place of its travesty which is contained in the present Bill. The consequential changes arising from the substitution of the genuine scheme in the place of its spurious successor will be quite easy to carry out and will leave the main plan of the Reserve Bank proposal unimpaired. The scheme was as follows :

The bank to be a State bank and the Government to own the whole capital of the bank. The Government may issue 5 per cent Government of India Reserve Bank stock at par in amounts of Rs. 100 and multiples thereof, but not exceeding Rs. 10,000, to an aggregate amount not exceeding the authorised capital of the bank. A register of Reserve Bank stockholders shall be maintained at Bombay, Calcutta, Madras, Rangoon, Lahore, Allahabad, Patna, Nagpore, Shillong and Delhi.

Stockholders shall be registered in a register of the province in which they are domiciled or ordinarily resident, or in which they have their principal place of business at their option, but no stockholder shall be registered in more than one register. Stock shall be registered in amounts of Rs. 100 or multiples thereof and not more than Rs. 10,000.

Stock shall be registered in any one name.

Stockholders domiciled in Coorg shall be registered in Madras; stockholders domiciled in any of the areas directly administered by the Central Government shall be registered in Delhi.

Stock may not be held in the name of any one who is not domiciled in India or who is not a British subject ordinarily resident in British India. Each stockholder shall have one vote irrespective of his holding.

Stockholders on each register shall elect 60 trustees for Reserve Bank stockholders for the province in which the register is situate, provided that no trustees shall be elected unless there are not less than 1,000 individual stockholders of the register. The 60 persons who receive most votes at an election shall be elected.

Elections shall be held triennially and casual vacancies shall not be filled up.

A trustee shall hold not less than Rs. 1,000 nominal value of stock.

Trustees in each province shall elect one director to the Board of the Bank.

A director shall hold Rs. 10,000 of Reserve Bank stock.

In order that trustees and directors may not have to go into the market and buy up the qualifying amount of stock, the Government shall retain unissued, in the first instance, not less than one crore nominal value of stock for issue to directors and trustees as occasion demands.

Directors and trustees must be qualified to be registered on the register of the province for which they are directors and trustees respectively.

In addition to elected trustees, any person who is for the time being an elected member of the Council of State or of the Assembly for a constituency in the province shall be a Trustee *ex-officio*.

The Board of the Bank shall consist of one governor, two deputy governors (one not voting), two directors elected by the Associated Chambers, two directors elected by the Federation of Indian Chambers, one director elected by Provincial Co-operative Banks, ten directors elected by trustees, four directors nominated by the Governor-General-in-Council, one government officer not voting, in all 23 of whom 21 or 22 would be voting.

"The governor and deputy governors shall hold office for six years; directors nominated by the Governor-General shall be appointed for three years in the first instance and thereafter for five years; directors elected by the Chambers of Commerce and by Provincial Co-operative Banks shall be elected for four years in the first instance and thereafter for five years; the directors elected by the trustees shall hold office for five years."

It might further be provided that when the time comes for Local Boards, local directors together with five members of the Local Board elected by local trustees, shall form a Local Board to which such functions shall be assigned as the Reserve Bank Board may determine.

Preference in allotment to small subscribers.

Stock to be issued provincially, not more than forty lakhs of rupees to be issued in any one province at the outset.

The above plan was the happiest *via media* between the shareholders' scheme and the state bank scheme. We make an earnest appeal that, even at this late hour, all possible efforts should be made to get it accepted.

We must now turn to a consideration of the relative merits of the two plans. As we said, the onus of proof was on Sir Purshottamdas and his two legislator-coleagues and the present legistators to show why they threw overboard a scheme on which the seal of approval of the Assembly had been set. It is incumbent on the Government to show why they paid such scant courtesy to the unanimous recommendation of a Committee presided over by one who has ever enjoyed, and continues to enjoy, the fullest confidence of the Government.

Now, what are the arguments advanced by the sponsors of the shareholders plan? They are :

(1) Every important country has its central banking institution planned on the basis of a shareholders' institution. Is it wise or advisable or desirable that India should try a novel experiment?

(2) The best and most satisfactory method of securing a directorate free from political influence is through the electorate of shareholders.

Let us first deal with the first argument. It is true that past experience and contemporaneous institutions are in favour of a shareholders plan. But let it not be forgotten that all economic principles and institutions are, to-day, in the melting pot. To argue that this system from the past or that or the other is sacrosanct is to show utter ignorance of the profound changes that are taking place.

Gold exchange standard was the idol of the last decade; a large number of adherents, through anger and chagrin, have broken the idol to pieces in this decade. Gold exchange standard may be said to have been one of the important features of central banking technique till two years ago. Central banking technique to-day would appear to repudiate the very basis of gold exchange standard. Who knows what other detail or aspect or feature of central banking technique would not suffer thorough transformation in this period of rapid changes and drastic reconstruction.

Even in insular England, with a conservative Government in power, a scheme is on hand for converting the Bank of England into a status midway between the present position and the conception of a Nationalised Bank of England which the socialists have been urging. It is an open secret that, in the past one year, there have been considerable differences of opinion between the Treasury and the Bank authorities. The differences have reached such an acute stage and the principles involved have been proved to be of such a fundamental character, that authoritative opinion in Britain to-day is that the fetish of the entire independence of the central banking institution from the influence of governmental or political interests has been overdone.

So long as general monetary conditions are of a humdrum, routine character, this independence of the central banking institution works all right. The moment the nation is faced with a grave situation or crisis, a revolution or war, the Bank has perforce to seek the support of the State. And the State is not able to divest itself of responsibility. If the State is to be responsible in an emergency, is not the State to have some power in normal conditions?

If so conservative a nation as the British could think of altering the status of the Bank of England while a government of the most conservative complexion holds office, is it at all proper or correct to refer to central banking practice of the world as a fixed and unalterable code that has been laid down, once and for all, as a result of past experience.

The real test of central banking has come only within recent years; this test is going to be of a more and more severe type. In the application of the test, it came to be realised that the old-time shibboleth of the Bank being free of political influence must give place to new ideas suited to the more stirring times and the more complicated economic conditions amidst which we live to-day. As more severe tests are being applied, the world is sure to realise that the conception of a shareholders plan of a Central Bank would not fit in with what has come to be called Economic Planning. Economic Planning is the doctrine of the day. Leading thinkers of the world have come to accept it as a most urgent need. Vested interests have been fighting hard against the implications of Economic Planning. But sooner or later, sooner rather than later, every important country of the world which seeks to maintain a standard of economy will be compelled to devise and shape its policy in terms of well-regulated Economic Planning. When Economic Planning commands universal adherence—and the day is not far off when it will comand such adherence—it will be found that a Central Bank also has to fit in in the programme of planned money. In order to fit in in such a programme, the shareholders scheme would prove to be an anachronism. We make bold to hazard the opinion that this fetish of the need of a Central Bank being free from governmental influence by its electorate being a body of shareholders is fast dying and will be dead and coffined in less than half a decade.

ARE SHAREHOLDERS AN ELECTORATE?

Those who seek to foist on India a shareholder plan should realise that subsequent world developments might well prove that they have made India begin at the point where England ends. In view of the flux and change through which the world is passing, it were part of wisdom to refrain from committing India to any irrevocable scheme.

If some kind of shareholder plan is deemed by the Government as unavoidable from their point of view, let them give most careful thought to the Stockholders' Scheme which is extracted above. They will find that it meets all the objections which the Government might bring against the shareholder scheme. At the same time, it may be provided that the Government should have the option to redeem the stock at any time after ten years by giving six months' notice. Owners of stocks will not become the proprietors of the reserve and other funds that will be accumulated by the Bank. Stockholders will be paid interest at the same rate as has to be paid for Government's new borrowings. This mode of raising capital would, therefore, be cheaper, free from complications, and elastic enough to admit of changes in the future if international developments warrant such change.

Moreover, if there is to be a regional plan, let it be a complete regional plan as in the original scheme.

If there is to be an Electoral College for the central board, let it not be an apology of an electoral college, as in the present plan of Local Bodies; let there be a complete and representative electoral college, manipulation of which will be impossible.

The second argument advanced in favour the shareholders scheme by the Government is that it is the only satisfactory method of securing a directorate free from political influence. We ask in all seriousness whether the Government or any of their friends do seriously suggest that shareholders are any electorate at all, let alone their being an impartial and non-political electorate.

Taking ninety-nine cases out of a hundred, have shareholders, at any time, elected directors? Those who have experience of the working of companies in centres like Bombay, Calcutta, Madras and Ahmedabad would agree with us that to say that shareholders have not only the right to elect directors but actually elect directors is a hundred per cent. lie. Directors are not elected in this way, in this country at any rate. *Directors elect themselves—and their successors. This is the simple truth.* And we challenge anyone to dispute it.

What will happen is that men who know how to intrigue with shares will, in conjunction with the Government and the Governor of the Bank, be able to manipulate things as they like. But the politician is a stranger to this sort of game. The Clive Street and Hornby Road talent is more equal to these machinations.

In their horror of politicians, and in their fervour for businessmen, the Government have failed to understand who is really a friend and who not. The following description of Politicians *versus* Businessmen in reference to the

Board of the Reserve Bank is from a speech of Mr. Jamnadas Mehta; and we are in entire accord with his opinion. Speaking in the Assembly on February 8, 1928, Mr. Mehta said :

> "I am sorry to remind the House that the inclusion of mere businessmen cannot bring the millenium. When the policy of the Bank is being framed behind closed doors and as these businessmen understand what that policy means in terms of cash, it is some of them—these independent businessmen—who will make an honest million out of their knowledge of the inner affairs and not the politician; the poor fellow would simply go there and honestly give his opinion. And yet it is these businessmen who are to be trusted exclusively with the Directorate."

We need only remind the Government that leakage of information about the New Loan, or Budget *kabbar*, or Silver Duty was due not to politicians but to the businessmen whose praise they are not weary of singing. If the shareholder plan goes through, the politician is sure to be kept out. But the men who can exploit the Bank and the information available in Board meetings are sure to find their way to the citadel of power. The shareholder plan will, thus, be responsible for handing the Bank over into the hands of just those people who require to be kept at arm's length.

The resulting position will be, therefore, that vested interests—Government and the business magnates—will, for aye and ever, be enthroned in power on a shareholder plan.

May we ask : Why do you want money by way of capital for a bank which is the manufacturer of money? The Bank does not need any capital. It is itself to be in possession of substantial funds. In the kind of Bill market that exists in India, the Reserve Bank will find it extremely difficult to find employment for all the funds that it will be obliged to invest. In such a situation, when money is going to be an embarassment to the Bank, the Government want it to raise Rs. 5 crores by way of capital. On this capital, the Bank itself would not be earning more than two or three per cent., even assuming that it is able to employ all its funds. On the other hand, the Bank will have to pay a dividend of a minimum of 5 per cent. and a maximum of 6 per cent. If the present proposals in the Bill stand, the maximum of 6 per cent. will be reached at the end of the very first year.

Earning two to three per cent. by its employment of the Rs. 5 crores, the Reserve Bank will yet have to pay 6 per cent. to those who put out that money. In other words, the Bank will be paying, from its other profit, anything like Rs. 15 lakhs to Rs. 20 lakhs to the shareholders. Now where do the other profits come from? The other profits arise mostly from the Issue Department. The profits of this Department are really those that are not being credited to the taxpayer and that will hereafter be made available to the Reserve Bank.

It is, of course, provided that on the basis of certain arrangements, the excess of the Bank's profits is to be handed over to the Government. But before such excess is arrived at, the shareholders will have snatched away Rs. 15 lakhs to Rs. 20 lakhs out of the profits which are now entirely the possession of the taxpayer. The payment of an unnecessarily attractive rate on the share capital of the Reserve Bank will not mean any loss to the Bank itself. The real sufferer is the taxpayer.

In other words, the Reserve Bank does not want money. It will find the money already in its possession an embarassement. If any share capital is to be secured, the employment of the additional funds will not be easy. Even so, the Bank will have to pay to the shareholders much more by way of dividend than it will itself be making by the employment of this money. In so far as there is a difference between the remuneration earned by the use of the shareholder's money and the actual dividend to be paid on the shares, such difference represents a loss not to the Reserve Bank but to the taxpayer.

BILL EXAMINED, CLAUSE BY CLAUSE

Subject to this proviso that the Government have not, in our view, put forward a convincing case for a shareholder plan; that the Assembly itself is committed to a State Bank proposal; that the latter has received authoritative and universal support in India; that, therefore, we stand for this scheme under any circumstances; and that, in any case, the Stockholders' plan with its scheme of electoral colleges is the best compromise possible, alike from the point of view of the Government and Indian public opinion, we may now take up the consideration of the individual clauses with a view to offer suggestions that would reduce the harmfulness of a shareholder plan to a minimum.

Section 4, Sub-section (1) provides for shares of Rs. 500 each. We suggest that the shares should be of Rs. 100 each.

The 1927 Joint Select Committee's report, the Bill prepared by the Committee, as well as the 1928 Bill of the Government contemplated shares of Rs. 100 each.

According to Section 4 Sub-section (2), there will be a regional register of shareholders; and it is provided that the shares shall be transferable from one register to another. It is, however, necessary to provide safeguards

that the wealthier provinces do not take undue advantage of this transfer and deplete the registers of the poorer provinces.

We would, therefore, propose that shares shall be transferable from one register to another provided the Board have the right to decline to register any transfer of shares if the shares entered in any one register reach a minimum equal to half the amount of capital originally assigned to that register.

Section 4, Sub-section (3) clause (*b*) and (*c*) provide for the holding of shares by certain classes of people other than Indians. Sir Cecil Kisch admits, in his monumental work *Central Banks*, that "as the Central Bank is a national institution it might be appropriately laid down, as is done in many cases, that only nationals are eligible for the office." If exceptions are necessary in special cases, as in the instance of Chile, only one member of the Board of Directors is chosen to represent foreign banks. If, thus, every country has a right to limit the directorate of its central banking institution to its nationals except in special cases, where the utmost that can be given is one seat or two to foreigners, it follows that in the generality of cases, shares of a Central Bank should be confined to nationals. If there are exceptional cases, a strict limit should be placed on the amount of shares that can be held by non-nationals. A far better devise for ensuring that the non-nationals cannot have an undue proportion of the share holding would have been to issue different classes of shares as in the case of the Central Bank of Chile one class to be confined entirely to nationals and the other class to non-nationals, and the proportion of the former class being eight times or ten times that of the latter. We would even now suggest that the model of Chile be followed in regard to the division of the share capital into two sections so that a maximum is automatically set to the holding of shares by non-nationals. If this suggestion is not acceptable, we would insist that at the end of clause (*c*) of sub-section (3) of Section 4, the following words be added :

"Provided the maximum holding of shares by British subjects ordinarily resident in India and/or by a scheduled bank or a corporation or company incorporated by/or under an Act of Parliament or any law in force in any of His Majesty's Dominions and having a branch in British India does not exceed 15 per cent. of the total capital of the Bank."

After Sub-section (4) of Section 4, we would like to add the following :

"The Central Board will decline to register any transfer of shares from one register to another if the shares left in any one register thereby become less than half the original capital assigned to that register. The Central Board will also decline to register any transfer of shares to non-nationals as and when the share-holding by British subjects ordinarily resident in India and/or by a scheduled bank or corporation or company incorporated by/or under and Act of Parliament or any law in force in any one of His Majesty's Dominions and having a branch in British India exceeds a limit of 15 per cent. of the total capital."

Section 6 provides for the Head Office of the Bank being established in Bombay.

The Head office of the Bank should be for six months in Bombay and for six months in calcutta.

Section 8 deals with the composition of the Central Board. Section 7 Sub-section (1), Clause (*a*) refers to a Governor and one Deputy-Governor or two Deputy-Governors, to be appointed by the Governor-in-Council after consideration of the recommendations made by the Board in that behalf.

We would suggest that if there were one Governor and one Deputy-Governor, it must be specificially provided that one of them must be an Indian. If there were a Governor and two Deputy-Governors, at least two of them must be Indians. The appointment should be made, subject to the approval of the Governor-General, by the Finance Member in the present constitution and the Finance Minister in the future constitution after the consideration of the recommendations made by the Board in that behalf. It should be definitely provided that the number of non-Indians in the Directorate, including the Governor and/or the Deputy Governor, should not exceed three.

The next Clause gives the power to the Governor-General-in-Council to mominate four directors.

The board of nomination should be in the hands of the Finance Member now and the Finance Minister in the future constitition, subject to approval by the Governor-General.

Clause (*c*) provides for eight directors to be elected on behalf of the shareholders.

Instead of eight directors, we would suggest that there should be eleven distributed as follows :

Bombay register	...	*three directors*
Calcutta register	...	*three directors*
Delhi register	...	*two directors*
Madras register	...	*two directors*
Rangoon register	...	*one director*
Total ...	...	*eleven directors.*

We will make the present Clause (*d*) into Clause (*e*) and suggest a new Clause (*d*) as follows :

Two directors to be appointed by the Central Provincial Co-operative Banks to represent agricultural interests.

Sub-section (4) of Section 8 provides for a five-year tenure for directors elected on behalf of shareholders and their eligibility for re-election. We would suggest that

Retired directors should be eligible for re-election only subject to the condition that no director should serve on the Board for more than ten years and no one who is over fifty five years can continue as a director.

Section 9, Sub-section (1) provides for Local Bodies which shall consist of eight members, five elected by the shareholders and three nominated by the Central Board. We suggest that

Six members should be elected by the shareholders and two nominated by the Central Board.

Section 9, Sub-section (2) deals with voting power, every two shares having one vote subject to a maximum of ten votes.

The maximum must be five votes.

Section 10 deals with the qualifications and dis-qualifications of directors and members of the local boards. Sub-section (3) says : "nothing in this section shall apply to a Governor of Deputy-Governor or the Director nominated under clause (*d*) of sub-section (1) of section 8.

The main justification for a Reserve Bank is that the management of currency will be

transferred from the hands of departmental officials to an institution controlled by a *personnel* with the requisite experience in banking and knowledge of domestic and international money markets. It is, therefore, important that the Governor should be one who has commercial and banking, not administrative and official, experience. In this connection, Mr. J. M. Keynes, in his note on a Central Bank appended to the Chamberlain Commission Report, makes the following remark: "It might, perhaps, increase public confidence in the non-official character of the Bank's management and in the Government's intentions, if it were definitely laid down that no members of the English and Indian Civil Service were eligible for appointment as officers of the Bank." We, therefore, suggest that at the end of Sub-section (111) of Section 10, the following be added:

Provided, however, no member of the English or Indian Civil Service be eligible for appointment as Governor of the Bank.

Section 13 Sub-section (1) provides for six meetings of the Central Board every year. As in the earlier bills, the minimum meetings for the year should be twelve. As our proposal is that Calcutta also should be the Head Office for six months of the year, it follows that half the number of meetings be held in Bombay and half in Calcutta.

In Section 14 Sub-section (2) the maximum number of votes should be reduced to five. In regard to the exercise of votes by proxy it must be made clear that such proxies could be given only in favour of shareholders. At the same time, a limit must be set to the total number of votes which an individual shareholder can exercise inclusive of his own vote and the votes conferred on him by proxy.

Section 15 deals with the first constitution of the Central Board. As the section stands at present, all the first directors will be nominees of the Government. This principle was recognised as highly improper by Sir Basil Blackett himself who agreed to the proposal that "instead of the nine shareholder directors being nominated by the Government for the first Board five only should be nominated and two should be allotted to the Federation of Indian Chambers and two to the Associated Chambers, thereby meeting one of the objections that were raised that the Government would be entirely responsible for the first Board".

We do not, in fact, see any necessity for the Government nominating the first Board. All that the Government need do is to appoint a small committee of responsible persons to look after the allotment of shares after the shares are thrown open to the public and applications have been received. This committee will proceed to the allotment in terms of the instructions contained in the Bill. After the allotment has been duly made, the shareholders thus entered in the various registers would proceed to elect the local boards; and the local board members selected by the shareholders could supply the required quota to the Central Board.

We have the strongest objection to the first board being appointed by the Government. Our experience is that once a person is appointed a director, the good old saying that possession is nine-tenths in law becomes applicable to him. Once a director, always a director. You cannot uproot a director after he has been duly installed. So puerile a body as shareholders could not remove directors who, within the first few years after their appointment by the Government, would be able to entrench their position in the firmest manner possible.

Mr. K. P. Thampan gave the instance of a Company Managing Director in the U.P. who installed his wife in his place when he was appointed a Minister in that Province. This instance was not an exception. It shows the rule.

All that the Government must do in the first instance is to make satisfactory arrangements for the shares being alloted in a due and proper manner. Once the allotment has been made, the shareholders could carry out the rest of the work.

We cannot under any circumstances agree to the present proposal of Sir George Schuster that the Government should appoint the first Board. We have no doubt in our minds that if it be made in this way, such a Board will continue to be merry year after year till, as Mr. Vidya Sagar Pandya said, only an act of God removes them. To say that the Government want a shareholder scheme for the purpose of securing an impartial and non-political electorate and to claim the power to appoint the first Board knowing fully well that first appointments are bound to be automatically renewed, seems to us to be extremely inconsistent propositions.

Section 17 deals with the several kinds of business which the Bank may do. Such changes as we propose in the sub-sections of this section refer to the removal of those clauses which empower the Reserve Bank to do business which is calculated to be of a competitive nature with the business usually transacted by member banks, as well as to the modification of the term pertaining to the financing of agriculture.

In Sub-section (1) of Section 17, in the last sentence, "banks" should read "schedule banks." And the words "and any other persons" must be deleted.

In Clause (b) of Sub-section (2) of Section 17, agricultural bills should be allowed a maturity of nine months instead of six months as proposed.

It also seems to us that needless restriction is sought to be imposed in the proviso that "the total face value of bills or notes purchased or rediscounted shall not at any time exceed one-fourth of the face value of all bills or notes purchased or rediscounted by the Bank. Under Section 17 sub-section 3, the

Bank is authorised to purchase sterling or to sell sterling to schedule banks "and persons approved by the Central Board". We do not think that the Reserve Bank should deal in this matter with any other than schedule banks. The amount of each individual transaction is fixed at a minimum of the equivalent of Rs. 1 lakh. The minimum limit of inter-bank business is £10,000 that is, Rs. 1 1/3 lakhs. In other words, the limit of the transactions permitted for the Reserve Bank would be less than the usual limit in banking circles. We would, therefore, suggest that the minimum should be raised to the equivalent of Rs. 3 lakhs.

In Sub-section (4) of Section 17, after the word "making" in the first line, we propose that the following words be inserted: "to schedule banks".

Clause (e) of Sub-section (4) of Section 17 takes note of the peculiar conditions prevalent in India in regard to the general vogue of the cash credit system banks. In such a case, the schedule banks or a Provincial Co-operative Bank could borrow from the Reserve Bank on a promissory note supported by relevant documents. This facility, however, is to be available only for five years from the date when this section comes into force. We are not so optimistic as to believe that the cash credit system will disappear in five years and all business houses would, thereafter, have recourse to the bill system. We would propose that this section should be in force at least for ten years in the first instance.

Sub-section 9 of Section 17 provides for the Reserve Bank accepting the custody of money, securities etc. It is obvious that the Bank should not do this class of business except for the Secretary of State in Council, the Governor-General in Council or any local government or Native State in India.

OPEN MARKET OPERATIONS, REMITTANCE AND RESERVES

Section 18 confers on the Reserve Bank the power to undertake open market operations as and when necessary, for the enforcement of its policy. While we will be the last to give our consent to any proposal that is likely to result in the Reserve Bank competing with the member banks in routine business, we attach great importance to this power of direct discount. In 1927-28 discussions, a number of changes were proposed with a view to exercise some kind of restraint on the Reserve Bank as regards open market operations. The essence of direct intervention on the part of the Reserve Bank in the market is that the Governor should be able to act in time and on right and adequate lines. If it is provided that the Governor should every time before he initiates open market operations, consult his Board and take their consent, the very purpose of open market operations would be defeated. The Governor may not, in such a situation, get such consent till the situation for which such operations are needed is past or has got out of hand. The power conferred in respect of open market operations assumes the fullest faith in the ability and adroitness of the Governor. It may well be that the Central Board will have to delegate powers under this section to the Governor as the only way by which open market operations can be, in practice, carried out. After all is said and done, the success of such a policy depends upon the judgment, nimbleness and discretion of the Governor. There is no purpose in limiting or qualifying such discretion. We are, therefore, in full agreement with Section 18 as it stands.

We now come to Section 33 which discusses the essence of the Issue Department. The present proposals, in broad outlines, are as follows:

1. The foreign reserves are to consist of gold and sterling securities. The minimum for the foreign reserves is to be 40 per cent.

2. Of the foreign reserve, gold in the form of coins or bullion should be a minimum amount of Rs. 35 crores.

3. Government of India Rupee securities held by the Bank should not exceed one-fourth of the total amount of the assets or Rs. 50 crores whichever amount is less.

4. The amount of rupee coins is not to exceed Rs. 50 crores.

5. Inland trade bills as and when suitable or necessary. While these are to be the limits or proportions of the various components of the reserve, Section 35 provides for the initial assets.

> On the date on which the Chapter comes into force, the Issue Department shall take over from the Governor-General in Council the liability for all the currency notes of the Government of India for the time being in circulation, and the Governor-General in Council shall transfer to the Issue Department gold coin, gold bullion, securities of sterling standard countries, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities of sterling standard countries so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed Rs. 50 crores.

Let us, in the first instance, examine the fundamental principles of the reserve proportions herein indicated. The minimum percentage of foreign reserve is to be 40 per cent. but gold and sterling securities to be transferred at the outset have been fixed at 50 per

cent. What is the exact function of the external reserve so far as the Indian paper currency system is concerned?

In the first place, the presence of a sufficient quantity of gold in the reserve is necessary in order to inspire confidence amongst the populace in the stability and integrity of the note issue. In the second place, the external reserve is to be utilised on those occasions when, owing to a poor favourable balance or adverse balance of trade, the currency authority is called upon to sell Reverse Councils.

From the point of view of the first, a minimum of 40 per cent. for external reserves may be considered adequate. From the point of view of the second, the maximum of 50 per cent. must be considered inadequate.

Let us assume that, for a year, the country has no export surplus. What will be the exact demand for remittance which the currency authorities will have to meet in such a year? Let it not be forgotten that in the case of India, we may have to be prepared not only for the contingency of an unfavourable trade balance in the future but also for the contingency of a withdrawal of foreign capital or the flight of domestic capital. 1931 was a painful year from the point of view of flight of capital. Fortunately, that flight has been arrested. But a new complication has arisen. 1932-33 showed an export surplus on merchandise account of a bare Rs. 3 crores. But for the adventitious aid of gold exports, the Government might have had to sell Reverse Councils for a substantial amount in that year. In the first six months of this fiscal year, the position in regard to merchandise surplus has slightly improved. But there are abundant indications that the gold stream is drying up.

In any case, he will be a bold man who seeks seeks to count on an adequate surplus in our international balance sheet in the coming years—adequate for meeting all the remittance requirements of the country, in respect of the so-called invisible items and in respect of Government's requirements in London.

If our forebodings, which are inspired by current indications, turn out to be true, the sterling assets that the Reserve Bank will have to find against sales of Reverse Councils would be, in a twelvemonth period, about £25 million in respect of such items as the profits of foreign shipping, banking and insurance concerns, profits of British merchants, remittance of British officials, expenditure of Indian students abroad etc., etc. The Reserve Bank will have to find another £25 million for the Secretary of State. The total remittance requirements of India are not less than £50 million for a year.

It is absolutely essential that in the case of a country with such heavy foreign liabilities of a recurring character, the currency reserve should contain an amount of foreign assets at least equivalent to the maximum of the remittance requirements of a twelvemonth period. In other words, over and above the minimum that is prescribed, the reserve should contain at least £50 million of external assets. Until and unless provision of this nature is made, our reserve cannot function smoothly in regard to the Reserve Bank's twin function of controlling the internal credit situation and international exchange.

We will be prepared to agree to a reduction in the minimum percentage of the external reserve from 40 per cent. to 35 per cent. But we should insist on the initial foreign assets being kept at a figure equal to 35 per cent. of the note issue *plus* the equivalent of £50 million.

The note issue at the start might be in the neighbourhood of Rs. 180 crores. 35 per cent. of Rs. 180 crores equals Rs. 63 crores. We require another Rs. 67 crores as the reserve against a year of adverse balance of trade. The total external reserve required would, therefore, equal to Rs. 63 crores *plus* Rs. 67 crores or Rs. 130 crores.

At first sight, it might look as though we are asking for an unduly high proportion of external reserve. But let it not be forgotten that we have to provide a reserve not only for the paper notes in circulation but also for the silver notes in circulation. Sir George Schuster comes to the happy conclusion that his reserve is adequate by confining his attention to the liability on the paper notes. He has misled the public by not bringing to their notice the existence of the silver notes in circulation for which also an adequate reserve is needed.

It is true that since the publication of the Hilton-Young Commission Report, a considerable amount of silver rupees has come back from circulation. But even so, the balance of silver coins in circulation could not be under Rs. 200 crores. In respect of these silver notes, there is a big disparity between the nominal value of the coins and their bullion value. No provision is being made for this deficit.

Be this as it may, the Reserve Bank has certainly to provide for the contingency of the silver notes being tendered and demand made thereagainst in the form of sterling. How the loss in respect of the tendered silver coins on account of the difference between the face value and the bullion value is to be made up is a concern entirely for the Government and not for the Reserve Bank. But it is certainly a concern of the Reserve Bank if the holders of the silver notes demand payment in sterling.

The adequacy of the external reserve must be considered not only in relation to paper notes but in relation to combined paper and silver notes. The notes in circulation from this point of view, are Rs. 380 crores.

Rs. 130 crores of external reserve as demanded by us is not an unduly high proportion against a liability of Rs. 380 crores. We would, therefore, suggest that the Joint Select Committee might agree to a reduction in the minimum percentage of the external reserve of 35 per cent. but must insist on the Government handing over, at the inauguration of the Reserve Bank, a total amount of gold coins and gold bullion and sterling securities which shall not be less than Rs. 130 crores, or, to be more accurate, 35 per cent. of the liability on the paper note issue *plus* an equivalent of £50 million. We may now consider whether the Government could manage to find an external reserve of this proportion without any undue difficulty.

By the amalgamation of the assets in the Paper Currency Reserve and the Gold Standard Reserve in the form of gold and sterling securities, the present position is such that we may reckon of having gold to the value of Rs. 44.35 crores and sterling securities of the value of Rs. 38.53 crores or Rs. 82.88 crores in all. We have suggested that we need Rs. 130 crores. The deficit to be made up, therefore, is Rs. 47 crores. How is this to be made up?

In the first place, according to Section 33, Sub-section 4, gold coins and gold bullion shall be valued at 8.47512 grains of fine gold per rupee. This value is based on the rupee being equal to 1s. 6d. gold. Now that the rupee is equivalent to 1s. 6d. sterling and now that sterling has depreciated by about 35 per cent., the actual value of the gold in the Reserve is much more than the basis of valuation proposed in Section 33, Sub-section 4.

Let us look at the matter in another way. Gold is now valued in our reserves, and will continue to be valued as per the Bill, at Rs. 21-3-10 per tola; the present price of gold is about Rs. 33.

It may be taken as certain that there is no chance of India adopting the old ratio, as Britain will not come back to the old parity. When Britain does re-link her currency to gold, it will be on a new parity which may be anything like 35 per cent. lower than the old parity.

In other words, at the time when revaluation of gold in the reserve has to be made in pursuance of the stabilisation of the currency in terms of gold, a surplus will be realised which would be equivalent to over 50 per cent. of the value now shown in the books. The gold that we now have is valued at Rs. 44.35 crores on the basis of Rs. 21-3-10 per tola. We can safely assume that, at the time of re-valuation, a profit of Rs. 22 crores will be set free. Against the Rs. 47 crores of additional external reserve that we require, we can take into account the secret reserve of Rs. 22 crores that we have in our gold stocks. The balance to be made up is, thus, reduced to Rs. 25 crores.

We would suggest that, as our Home Treasury balance is at a fairly high figure owing to satisfactory remittances from India and the issue of the last sterling loan, sterling securities should be transferred from the Home Treasury to the Issue Department of the Reserve Bank for an amount equivalent to Rs. 10 crores. The Home Treasury balance can safely afford this transfer.

For the balance of Rs. 15 crores, we would propose that the Government of India should take action on the lines which we have indicated, on many occasions, in regard to an arrangement between America and India for a gold loan to be given by America to this country against the earmark of a corresponding amount of silver and against an undertaking on the part of India to sell no silver until the date of redemption of this loan. It is an arrangement which America would jump at. It is an arrangement by which India would get gold without disturbing the London market or incurring the displeasure of the Bank of England. Above all, this proposal will solve, ot one stroke, India's gold problem and the world's silver problem.

The next sections to which we should devote our attention are 40 and 41, dealing with the obligation of the Reserve Bank to sell sterling and to buy sterling at 1s. 5 49/64d. and 1s. 6 3/16d. respectively. These are the provisions by which the 18d. ratio is to be continued as part and parcel of the new scheme. This is what the London Committee say on the ratio provisions:

> "On this basis the exchange obligations incorporated in the Bill must necessarily be in accord with the rupee-sterling ratio existing at the time when the Bill is introduced. This statement does not, however, imply any expression of opinion on the part of the Committee on the merits or demerits of the present ratio. The ratio provisions in the Bill are designed to make it clear that there will not be any change in the *de facto* situation by the mere coming into operation of the Reserve Bank Act.
>
> A considerable majority of the Indian Delegates feel it their duty to record their view that a suitable exchange ratio is one of the essential factors for the successful working of the Reserve Bank. They point out that considerable changes have occurred in the currency bases and policies of almost all the countries of the world in the last few years. In their view it is for the Government of India and the Legislature to examine these and all other relevant considerations with a view to ensuring that the minimum possible strain is placed on the currency system of India."

We do wish that the members of the Committee had been less timid than is indicated in the above paragraph. Where was the necessity to mince words or to succumb to a feeling of undue tenderness in the description of the Government's exchange policy? The fact is that eighteen pence ratio was forced on the country in the teeth of the unanimous opposition of the Indian public. It is also the fact that the maintenance of the eighteenpence ratio has been causing a tremendous strain on

Government finances, on Governments's monetary machinery and on India's trade, finance and industry.

If Britain had not gone off the gold standard in September 1931, Indian financial authorities would have been driven to a situation in which they would have had to eat the humble pie and throw up their hands, as in the case of the two shilling ratio, and admit that they could not maintain the ratio. The divorce of sterling from gold was a God-send. It saved the face of our authorities. While, in letter, 18d. ratio stood, in spirit eighteen pence gold had disappeared. The Government of India were satisfied that their prestige was saved in letter, though not in spirit.

If they had a correct sense of duty to the public and if they had the courage to admit mistakes when they realised their own mistakes, Sir George Schuster and his colleagues should have admitted, in the period between Morch 1931 and September 1931, that the country's currency machinery was no longer working on the basis of 1s. 6d. but on the basis of 1s. 5½d.

We wish to recall the sale of gold to the Government as from the first week of March 1931, at a time when, if the ratio were functioning smoothly, the Government should have been selling gold. It was, thus, clear that the lower gold point had really become the upper gold point. In other words, the ratio which was functioning was one for which the upper limit was 1s. 5 49/64d. This was, in effect, an automatic downward shift of the ratio from 1s. 6d. to 1s. 5½d.

We wish to put a few straight questions to Sir George Schuster: Did he or did he not realise that, when in the few months following March 1931, gold was being offered to the Currency Department at the lower gold point, the ratio which was functioning was not eighteen pence but 17½d? Did the authorities take due note of this abnormal and extraordinary development? Did they draw the attention of their masters in the India Office to this abnormal and extraordinary development? Did they not feel it their duty to insist that when, owing to automatic forces, the ratio had thus begun to limp, the best course in the situation was to admit the futility of keeping up the pretence of maintaining eighteen pence? Was there any correspondence between the Government of India and the Secretary of State on that occasion on this question?

If Sir George Schuster did not see in this development anything abnormal and extraordinary, we regret that we cannot congratulate him on his power of observation and judgment. If he did notice this development and realise it to be abnormal, he ought to have had the fairness to tell the Indian public the full meaning of this development.

We ourselves believe that it was prestige that stood in the way of this frank avowal of the transition from eighteen pence to 17½d. Some of the members who have returned from the London Conference have been telling us that a change of ratio is necessary; that a change of ratio cannot, however, be effected by the Legislature; that is for the executive to take action; and that the Executive should take action overnight as soon as the need for action arises. Can we expect any such timely or wholesome action from a government which did not have the courage in 1931 to admit an admitted fact? The same prestige will stand in the way of any action hereafter. The same belief of the India Office in a higher ratio being more favourable to the British officials in India and to British trade will stand in the way of a revision of the ratio if the revision of the ratio is left to the authorities.

It is sad to reflect that on the London Committee were men like Sir Phiroze Sethna, Sir Purshottamdads Thakurdas and Mr. A. Rangaswami Iyengar who fought hard for sixteen pence in 1927; and that they did not see their way, on the present occasion to express their views on the ratio question in clear unambiguous and unequivocal language. The men who fought hard and fiercely in 1927 seem to have grown timid and sweetly reasonable in 1933.

While the men who opposed eighteen pence have thus grown timid, the man who imposed the eighteen pence ratio has himself changed his view and has had the courage to state his new opinions with candour and fervour. In 1927, Sir Basil made a fetish of the need for stability of the external value of the rupee. He now deplores that "of late years stability of the price level has been sacrificed to stability of the external exchanges". The par of exchange is a phrase with which the business world has long been familiar. No one talks or thinks about the par of prices or parity of the price level. Yet, Sir Basil urges, "internal commerce and the well-being of those dependent on it are far more important in the economic life of the nation than external trade, even where the proportionate figures of external trade are unusually large as in this country or Belgium."

The following is his description of what should be the aim of the authorities on the relative importance of internal stability and stability of external exchange:

> "What might be called the natural currency arrangement for an independent sovereign state would be a local currency, owing its internal purchasing value to management by or on behalf of the State, and so managed and controlled as to retain approximately the same purchasing power from year to year and from decade to decade, external trade being provided for by appropriate machinery which did not disturb internal stability."

In another context, he again states that the remedy "is a financial organisation under which each economic unit will possess a local currency of its own designed to maintain its own internal prices at parity and so to secure

the most favourable conditions possible for the maximum economic activity within its own area." With our main eye on the internal stability of prices, it is yet possible to have a reconciliation of internal stability of prices with active external trade. If each country in the world is to shape its monetary policy from this point of view, that very fact would remove the major cause of violent fluctuations in international exchanges.

What is needed is not a static stability of exchange. In this connection, Mr. Keynes suggests that a three year period or some such unit must be taken and the monetary authorities should aim at maintaining stability of exchange at a level which they should consider appropriate. If, during this period, experience shows that the level chosen is not correct, a change accordingly should be made in the next three year period chosen. There is nothing sacrosanct about an unalterable rate of exchange. This is the great principle which has been arrived at by economists of the order of Mr. Keynes and Sir Basil Blackett.

In the light of such authoritative lead, it was up to the Indian Government to scrap a ratio which has never functioned properly and which is functioning at all to-day only because of the adventitious aid of gold exports. It is obvious that the present ratio has brought about a situation in which surplus on merchandise account has practically disappeared. The continuance of the present ratio is dependent upon the continuance of gold exports. A more artificial situation cannot be imagined. The plain meaning of current facts and developments is that 18d. cannot and does not work; that scrapping it and installing a lower ratio is necessary and desirable; that, for such action, we have got the authority of Sir Basil Blackett himself against the Blackett ratio.

The need of the world to-day is said to be the raising of prices. In the report of the Committee on Monetary and Financial Questions of the Ottawa Conference, the Governments of the Empire state that they regard a rise in the world wholesale prices as in the highest degree desirable and "record their conviction that international action is urgently necessary and announce their desire to co-operate with other nations in any practical measures for raising wholesale prices." What are the respective governments really doing about raising wholesale prices? What else can India, on her part, do to give effect to this recommendation than scrap the ratio and adopt such a ratio as would enable prices to rise to 1925-26 level?

The disparity between the movements in the Index of Wholesale Prices for India and in the index for wholesale prices in Britain clearly shows that the present ratio of rupee to sterling is not at the proper level. There is no case for postponing action in this matter. If action is now postponed, no change can be made in the coinage or currency acts in the future constitution, except with the consent or approval of the Governor General. All circumstances taken into consideration, we would strongly appeal to Sir George Schuster to have the courage of his convictions and to do by India the barest duty and the merest justice.

We now come to section 42. We have already shown that there is no case for a Reserve Bank type of a central banking institution in India and that the provision of compulsory deposits from member banks should be scrapped. Sub-section 3 provides for the Bank sending in monthly returns. Even though compulsory deposits are removed, the banks in the country should be compelled to submit a full and complete balance sheet every month. Such information is necessary to improve the monetary statistics available in the country. Section 43 deals with the agreement to be entered into with the Imperial Bank.

The agreement with the Imperial Bank must be modified on the following lines:

(*a*) Instead of an interest-free deposit of Rs. 3 crores in the first five years, we suggest a lump payment of Rs. 9 lakhs in the first, Rs. 6 lakhs in the second, and Rs. 3 lakhs in the third, five-year periods.

(*b*) The Imperial Bank should be authorised to use the currency chest for its own internal remittances and also for providing internal remittances to member banks at par.

(*c*) The Reserve Bank must maintain a list of approved banks. The approved banks must be confined to banks registered in India and specifying certain minimum requirements of paid-up capital and reserve, which should be not less than Rs. 60 lakhs. The Banks should satisfy the Reserve Bank of their clean balance sheet position. If any bank on the approved list starts a new branch in any centre where no approved bank has a branch, it should be given interest-free deposit of Rs. 3 lakhs for five years by the Government. If the Government desire really to encourage branch banking development, this is a recommendation which they should have no hesitation in accepting.

(*d*) If the Imperial Bank is able to persuade the Government to the changes that we have suggested, we would not insist on the approved banks having the right to secure, by tender, the agency work of the Reserve Bank. We shall have, in that case, no objection to the Reserve Bank appointing the Imperial Bank as sole agent. Our acceptance of this sole agency is subject to the Government agreeing to extend some manner of assistance to the deserving Indian banks in a way that will enable them to enhance their prestige in the eyes of the public. The interest-free deposit to be given to new branches is a kind of contact with the Government which should be of great value to the sound Indian banks to make headier progress in the future.

Abstract of the Accounts of the Currency Department on the 15th October, 1933.

THE RESERVE BANK OF INDIA BILL, 1933

CONTENTS.

CHAPTER I.

PRELIMINARY.

CLAUSES.

1. Short title, extent, commencement and duration.
2. Definitions.

CHAPTER II.

INCORPORATION, SHARE CAPITAL, MANAGEMENT AND BUSINESS.

3. Establishment and incorporation of Reserve Bank.
4. Share capital, share registers and shareholders.
5. Increase and reduction of share capital
6. Head Office, branches and agencies.
7. Management.
8. Composition of the Central Board, and term of office of Directors.
9. Local Boards, their constitution and function.
10. Qualifications and disqualifications of Directors and members of Local Boards.
11. Removal from and vacation of office.
12. Casual vacancies and absences.
13. Meeting of the Central Board.
14. General meetings.
15. First constitution of the Central Board.
16. First constitution of Local Boards.
17. Business which the Bank may transact.
18. Power of direct discount.
19. Business which the Bank may not transact.

CHAPTER III.

CENTRAL BANKING FUNCTIONS.

20. Obligation of the Bank to transact Government business.
21. Bank to have the right to transact Government business in India.
22. Right to issue bank notes.
23. Issue Department.
24. Denominations of notes.
25. Form of bank notes.
26. Legal tender character of notes.
27. Re-issue of notes.
28. Recovery of notes lost, stolen, mutilated or imperfect.
29. Bank exempt from stamp duty on bank notes.
30. Powers of Government in respect of note issue and assets of the Bank in certain circumstances.
31. Issue of demand bills and notes.
32. Penalty.
33. Assets of the Department.
34. Liabilities of the Issue Department.
35. Initial assets and liabilities.
36. Method of dealing with fluctuations in rupee coin assets.
37. Suspension of assets requirements.
38. Obligations of Government and the Bank in respect of rupee coin.
39. Obligation to supply different forms of currency.
40. Obligation to sell sterling.
41. Obligation to buy sterling.
42. Cash reserves of scheduled bank to be kept with the Bank.
43. Agreement with the Imperial Bank.

CHAPTER IV.

GENERAL PROVISIONS.

44. Allocation of surplus.
45. Publication of bank rate.
46. Auditors.
47. Appointment of special auditors by Government.
48. Powers and duties of auditors.
49. Returns.
50. Power to require declaration as to ownership of registered shares.
51. Liquidation of the Bank.
52. Power of the Central Board to make regulations.
53. Amendment of Act III of 1906.
54. Repeals.

THE SCHEDULES.

A Bill to constitute a Reserve Bank of India.

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India, and generally to make provisions for matters incidental thereto;

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system;

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures ;

It is hereby enacted as follows:—

CHAPTER I.

PRELIMINARY.

Short title, extent, commencement and duration.

1. (*1*) This Act may be called the Reserve Bank of India Act, 1933.

(*2*) It extends to the whole of British India, including British Baluchistan and he Sonthal Parganas.

(*3*) This section shall come into force at once, and the remaining provisions of this Act shall come into force on such date or dates as the Governor General in Council may, by notification in the Gazette of India, appoint.

(*4*) Chapter III shall remain in force for a period of twenty-five years and thereafter until repealed.

Definitions.

2. In this Act, unless there is anything repugnant in the subject or context,—

(*a*) "the Bank" means the Reserve Bank of India constituted by this Act ;

(*b*) "bank note" means paper money issued by the Bank ;

(*c*) "the Central Board" means the Central Board of Directors of the Bank ;

(*d*) "sterling standard country" means the United Kingdom and any country, other than British India, in which any person is entitled by law to obtain sterling on demand from the

on payment at a fixed rate in the legal tender currency of that country ;

(*e*) "provincial co-operative bank" means any society which is registered or deemed to be registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies and the sole business and object of which is the financing of the other societies in a province which are or are deemed to be so registered ;

(*f*) "rupee coin" means silver rupees which are legal tender under the provisions of the Indian Coinage Act, 1906 ; and III of 1906.

(*g*) "scheduled bank" means a bank included in the Second Schedule.

CHAPTER II.

INCORPORATION, SHARE CAPITAL, MANAGEMENT AND BUSINESS.

Establishment and incorporation of Reserve Bank.

3. (*1*) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(*2*) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share capital, share registers and shareholders.

4. (*1*) The original share capital of the Bank shall be five crores of rupees divided into shares of five hundred rupees each, which shall be fully paid up.

(*2*) Separate registers of shareholders shall be maintained at Bambay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has principal place of business in India, but no person shall be registered as a shareholder in more than one register ; and no person who is not.—

(*a*) domiciled in India, or

(*b*) a British subject ordinarily resident in India or

(*c*) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any of His Majjecty's dominions and having a branch in British India,

shall be registered as a shareholder or be entitled to payment of any dividend on any share.

(*4*) The Central Board may, at its discretion, without giving any reason, decline to allot shares to any applicant or to register any transfer of shares.

(*5*) The nominal value of the shares originally assigned to the various registers shall be as follows, namely :—

(*a*) to the Bombay register—one hundred and sixty-five lakhs of rupees ;

(*b*) to the Calcutta register—one hundred and sixty-five lakhs of rupees ;

(*c*) to the Delhi register—eighty lakhs of rupees ; ,

(*d*) to the Madras register—fifty lakhs of rupees ;

(*e*) to the Rangoon register—forty lakhs of rupees :

Provided that, in the event of the shares assigned to any register not being fully taken up at the first allotment, the Central Board may, with the previous sanction of the Governor General in Council, transfer a portion of such shares from that register to another.

(*6*) In allotting the shares assigned to a register, he Central Board shall, in the first instance, allot two shares to each qualified applicant who has applied for two or more shares ; and, if the number of such applicants is greater han half the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

If the number of such applicants is less than half the number of shares assigned to the register, the Central Board shall allot the remaining shares to applicants who have applied for more shares than two ; and if the number of extra shares so applied for exceeds the number of shares so to be allotted, the Central Board shall allot them among the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

If any shares still remain unallotted, the Central Board shall allot them to applicants who have applied for one share only ; and if the number of shares so applied for exceeds the number of shares to be so allotted, the Central Board shall determine by lat the applicants to whom the shares shall be allotted.

If, afer all applications have been met in accordance with thhe provisions of this sub-section, any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council, at not less than par, as soon as may be.

The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares so allotted to him.

Increase and reduction of share capital.

5. (*1*) The share capital of the Bank may be increased by the Central Board with the previous sanction of the Governor General in Council.

(*2*) Every such increase shall be fully paid up, and the areas to which such further shares shall be allotted and the price at which they may be issued shall be fixed by the Central Board with the like sanction.

(*3*) The Central Board may determine the manner in which any increase of share capital shall be effected.

(*4*) The share capital of the Bank may be reduced by the Central Board, with the previous sanction of the Governor General in Council, to such extent and in such manner as may be determined by the Bank in general meeting.

Head Office, branches and agencies.

6. The Head Office of the Bank shall be established in Bombay, and the Bank shall, as soon as may be, establish branches in Calcutta, Delhi, Madras and Rangoon, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere.

Management.

7. The general superintendence of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

Composition of the Central Board, and term of office of Directors.

8. (1) The Central Board shall consist of the following Directors, namely :—

(a) a Governor and one Deputy Governor or two Deputy Governors, to be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf ;

(b) four Directors to be nominated by the Governor General in Council ;

(c) eight Directors to be elected on behalf of the shareholders on the various registers, in section 9 and in the following numbers, namely : :—

(i) for the Bombay register—two Directors ;

(ii) for the Calcutta register—two Directors ;

(iii) for the Delhi register—two Directors ;

(iv) for the Madras register—one Director ;

(v) for the Rangoon register—one Director ; and

(d) one government official to be nominated by the Governor General in Council.

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, subject to any minimum prescribed by the Governor General in Council.

(3) A Deputy Governor and the Director nominated under clause (d) of section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote :

Provided that when the Governor is absent a Deputy Governor authorised by him in this behalf in writing may vote for him.

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council mayfix when appointing them, and shall be eligible for re-appointment.

A Director elected under cluse (c) of sub-section (1) shall hold office for five years, or thereafter until his successor shall have been duly elected, and, subject to the provisions of section 10, shall be eligible for re-election.

The Directors nominated under clause (b) and clause (d) of sub-section (1) shall hold office during the pleasure of the Governor General in Council.

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of the Board.

Local Boards, their constitution and functions.

9. (1) A Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of.—

(a) five members elected from amongst themselves by the shareholders who are registered on the Register for that area and are qualified to vote and

(b) not more than three members nominated by the Central Board, who may be nominated at any time.

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the Register for that area, for a period of not les than six months ending with the date of the meeting, as holding two shares shall have one vote, and each shareholder so registered as having more than two shares shall have one vote for each two shares, but subject to a maximum of ten votes.

(3) The members of a Local Board shall hold office until they vacate it under sub-section (5) and, subject to the provisions of section 10, shall be eligible for re-election or re-nomination, as the case may be.

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act, the Central Board shall direct an election to be held of members of the Local Board concerned, and such election shall be held forthwith, and the names of the persons elected shall be notified to the Central Board.

(5) On such notification, the Central Board shall proceed to make any nominations permitted by clause (b) of sub-section (1) it may then decide to make, and shall fix the date on which the outgoing members of the Local Board shall vacate office, and the incoming members shall be deemed to have assumed office on that date.

(6) The elected members of a Local Board shall, as soon as may be after they have been elected, elect from amongst themselves one or two persons, as the case may be, to be Directors representing the shareholders on the Register for area for which the Board is constituted.

(7) A Local Board shall advise the Central Board on such matters as may be generally or specifically referred to it and shall perform such duties as the Board may, by regulations, delegate to it.

Qualifications and disqualifications of Directors and members of Local Boards.

10. (1) No person may be a Director or a member of a Local Board who is not or has not at some time been :—

(a) engaged in the direction of agricultural, commercial, financial or industrial activities, or

(b) a director of any company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation VII of 1913. or a company incorporated by or under any law for the time being in force in any place outside British India.

(2) No person may be a Director or a member of a Local Board who—

(a) is a government official or an official of a State in India, or

(b) is, or at any time has been, adjudicated an insolvent, or

(c) is an officer or employee of any bank, or

(d) is a director of any bank, other than a registered society as defined in clause(e) of section 2 of the Co-operative Societies Act, 1912 :

Provided that an official of a State in India (not being a government official on deputation in the State) may be nominated as a Director or as a member of a Local Board.

(3) Nothing in this section shall apply to the Governor, or to a Deputy Governor or to the Director nominated under clause (d) of sub-section(1) of section 8.

Removal from and vacation of office.

11(1) The Governor General in Council may remove from office the Governor, or a Deputy Governor or any nominated or elected Director :

Provided that in the case of an elected Director this power shall be exercised only on a resolution mencement of this Act, whichever is later, he is majority consisting of not less than nine Directors.

(2) A Director nominated or elected under clause (b) or clause (c) of section 8, and any member of a Local Board shall cease to hold office if, at any time after six months from the date of his nomination or election, or eighteen months from the commencement of this Act, whichever is later, he is not registered as a holder of unencumbered shares of the Bank of a nominal value of not less than ten

thousand rupees, or if he ceases to hold unencumbered shares of that value.

(3) The Governor General in Council may remove from office any Director, and the Central Board may remove from office any member of a Local Board, if such Director or member becomes subject to any of the disqualifications specified in subsection (2) of section 10.

(4) The appointment, nomination or election as Director or member of a Local Board of any person who is a member of the Indian Legislature or of a local Legislature shall be void, unless, within one month of the date of his appointment, nomination or election, he ceases to be such member, and, if any Director or member of a Local Board is elected or nominated as a member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be.

(5) A Director may resign his office to the Governor General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant.

Casual vacancies and absences.

12. (1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment, the Governor General in Council may appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (c) of sub section (2) of section 10, be an officer of the Bank.

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director.

(3) A casual vacancy in the office of a Director, other than the vacancies provided for in sub-section (1), shall be filled in the manner in which, and by the authority by whom, the nomination or election of the Director vacating office was made; and the Director so nominated or elected shall hold office for the unexpired portion of the term of his predecessor.

(4) Where any casual vacancy in the office of any member of a Local Board occurs, the Central Board may nominate thereto any qualified person recommended by the Local Board, and the person so nominated shall hold office for the unexpired period of the term of his predecessor.

Meetings of the Central Board.

13. (1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter. Meetings shall ordinarily be held in Bombay, but at least two meetings of the Central Board shall be held in Calcutta in each year.

(2) The Governor, or in his absense the Deputy Governor authorised by the Governor under the proviso to sub-section (3) of section 8 to vote for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall shave a second or casting vote.

General meetings.

14. (1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually at Bombay within six weeks from the date on which the annual accounts of the Bank are closed, and a general meeting may be convened by the Central Board at any other time.

(2) Any shareholder shall be entitled to attend at any general meeting, and each shareholder who has been registered on any Register, for a period of not less than six months ending with the date of the meeting, as holding two shares shall have one vote, and each shareholder so registered as having more than two shares shall have one vote for each two shares, but subject to a maximum of ten votes; and such votes may be exercised by proxy.

First constitution of the Central Board.

15. (1) The following provisions shall apply to the first constitution of the Central Board, and, notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act.

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor General in Council on his own initiative, and shall receive such salaries and allowances as he may determine.

(3) The first Directors representing the shareholders on the various Registers shall be nominated by the Governor General in Council after consultation with the Local Governments concerned.

(4) A Director so nominated to represent shareholders on the Bombay or Calcutta Register shall hold office for two years, and a Director so nominated to represent shareholders on the Delhi, Madras or Rangoon Register shall hold office for four years, or thereafter until his successor shall have been duly elected.

16. As soon as may be after the commencement of this Act, the Central Board shall direct elections to be held and may make nominations, in order to constitute Local Boards in accordance with the provisions of section 9, and the members of such Local Boards shall hold office up to the date fixed under sub-section (5) of section 9, but shall not exercise any right under sub-section (6) of that section.

Business which the Bank may transact.

17. The Bank shall be authorised to carry on and transact the several kinds of business hereinafter specified, namely:—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor General in Council, Local Governments, States in India, banks and any other persons;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and arising out of *bona fide* commercial or trade transactions, bearing two or more good signatures, one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and bearing two or more good signatures, one of which shall be that of a scheduled bank, or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within six months from the date of such purchase or rediscount, exclusive of days of grace: provided that the total face value of bills or notes so purchased or rediscounted shall not at any time exceed one fourth of the total face value of all bills and notes purchased or rediscounted by the Bank up to that time;

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor

General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace ;

(3) the purchase from and sale to scheduled banks and persons approved by the Central Board, in amounts of not less than the equivalent of one lakh of rupees, of the currencies of such sterling standard countries as may be specified in this behalf by the Governor General in Council by notification in the Gazette of India, and of bills of exchange (including treasury bills) drawn in or on any place in any such country, and maturing within ninety days from the date of such purchase, exclusive of days of grace ; and the keeping of balances with banks in such countries ;

(4) the making of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorised to invest trust money by any Act of Parliament or by any law for the time being in force in British India ;

(b) gold coin or bullion or documents of title to the same ;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank : provided that the total of the loans and advances against such securities as are referred to in sub-clause (b) of clause (2) shall not at any time exceed one-fourth of the total loans and advances made by the Bank up to that time ;

(d) such bills of exchange as are eligible for purchase by the Bank under clause (3) ;

(e) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents evidencing title to goods which have been transferred, assigned, hypothecated or pledged to any such bank as security for a cash credit granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops : provided that no loan or advance shall be made on the security of any promissory note such as is referred to in this sub-clause after the expiry of five years from the date on which this section comes into force ;

(5) the making of advances to the Governor General in Council repayable in each case not later than three months after the close of the financial year in respect of which the advance has been made ;

(6) the issue of demand drafts and the making, issue and circulation of bank post bills made payable on its own branches ;

(7) the purchase and sale of securities, maturing within five years from the date of such purchase, of the Government of any sterling standard country specified in this behalf by the Governor General in Council by notification in the Gazette of India ;

(8) the purchase and sale of securities of the Government of India of any maturity, or of a Local Government or of a local authority in British India maturing within ten years from the date of purchase, or of such securities of States in India of like maturity as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board : provided that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits ;

(b) the value of such securities maturing after six months shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits ;

(c) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and one-tenth of the liabilities of the Banking Department in respect of deposits ; and

(d) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund ;

(9) the custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividend, of any such securities ;

(10) the sale and realisation of all property, whether moveable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims ;

(11) the acting as agent for the Secretary of State in Council, the Governor General in Council or any Local Government or State in India in the transaction of any of the following kinds of business, namely :—

(a) the purchase and sale of gold and silver ;

(b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company ;

(c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares ;

(d) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere ;

(e) the management of public debt ;

(12) the purchase and sale of gold coin and bullion ;

(13) the opeing of an account with, and the acting as agent or correspondent of, any other bank which is the pricipal currency authority of a sterling standard country under the law for the time being in force in that country ;

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed ;

Provided that no money shall be borrowed under this clause from any person in India other than a scheduled bank, or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country :

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank ;

(15) the making and issue of bank notes subject to the provisions of this Act ; and

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act.

Power of direct discount.

18. When, in the opinion of the Central Board, or, where the powers and functions of the Central Board under this section have been delegated to the Governor, in the opinion of the Governor, it is necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any

limitation contained in sub-clauses (*a*) and (*b*) of clause (2) of section 17, purchase sell or discount any bills of exchange or promissory notes drawn and payable in India and arising out of *bonâ fide* commercial or trade transactions, bearing two or more good signatures and maturing within ninety days from the date of such purchase or discount, exclusive of days of grace.

Business which the Bank may not transact.

19. Save as otherwise provided in sections 17, 18 and 43, the Bank may not—

(1) engage in trade or otherwise have a direct interest in any commercial, industrial, or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims: provided that all such interests shall be disposed of at the earliest possible moment;

(2) purchase its own shares or the shares of any other bank or of any company, or grant loans upon the security of any such shares;

(3) advance money on mortgage of, or otherwise on the security of, immovable property or documents of title relating thereto, or become the owner of immovable property for its own business premises and residences for its officers and servants;

(4) make unsecured loans or advances;

(5) draw or accept bills payable otherwise than on demand;

(6) allow interest on deposits or current accounts.

CHAPTER III.

CENTRAL BANKING FUNCTIONS.

Obligation of the Bank to transact Government business.

20. The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt, on such conditions as may be agreed upon.

Bank to have the right to transact Government business in India.

21. (1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall undertake to entrust the Bank, on such conditions as may be agreed upon, with all their money, remittance, exchange and banking transactions in India and, in particular, to deposit free of interest all their cash balances with the Bank:

Provided that nothing in this sub-section shall prevent the Governor General in Council or any Local Government from carrying on money transactions at Government treasuries or sub-treasuries at places where the Bank has no branches or agencies, and the Governor General in Council and Local Governments may hold at such treasuries and sub-treasuries such balances as they may require.

(2) The Governor General in Council and each Local Government shall undertake to entrust the Bank, on such conditions as may be agreed upon, with the management of the public debt and with the issue of any new loans in India.

Right to issue bank notes.

22. (1) The Bank shall have the sole right to issue paper money in British India, and may, for a period of one year from the date on which this Chapter comes into force, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were banks notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the aforesaid date the Governor General in Council shall not issue any currency notes or any other kind of paper money.

Issue Department.

23. (1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34.

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Denominations of notes.

24. Bank notes shall be of the denominational values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, as may be directed by the Governor General in Council.

Form of bank notes.

25. The design, form and denomination of Bank notes shall be such as may be approved by the Governor General in Council.

Legal tender character of notes.

26. (1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(2) The Governor General in Council may, by notification in the Gazette of India, declare that, with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

Re-issue of notes.

27. Any bank note re-issued from any office of the Bank shall be sterilized and disinfected before re-issue, and the Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Recovery of notes lost, stolen, multilated or imperfect.

28. Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor-General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note:

Provided that the Bank may, with the previous sanction of the Governor-General in Council, prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace.

Bank exempt from stamp duty on bank notes.

29. The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

Powers of Government in respect of note issue and assets of the Bank in certain circumstances.

30. If at any time the Bank fails to comply with any provision of this Chapter or with any other

provision of this Act, the Governor-General in Council may, by notification in the Gazette of India, declare that the Bank has forfeited the right of note issue, and shall thereupon take over the liabilities of the Issue Department, together with such portion of the assets of the Bank as is required to meet such liabilities, and thereafter the business of the Issue Department shall be carried on in the manner prescribed by this Act by such agency as the Governor-General in Council may determine.

Issue of demand bills and notes.

31. No person in British India other than the Bank or, as expressly authorised by this Act, the Governor-General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand, or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person :

Provided that cheques or drafts payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

Penalty.

32. (*1*) Any person contravening the provisions of section 31 shall, on conviction by a Presidency Magistrate or a Magistrate of the first class, be punishable with fine equal to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(*2*) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

33. (*1*) The assets of the Issue Department shall consist of gold coin, gold bullion, securities of sterling standard countries, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(*2*) Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or securities of sterling standard countries :

Provided that the amount of gold coin and gold bullion shall not at any time be less than thirty-five crores of rupees in value.

(*3*) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes drawn and payable in British India as are eligible for purchase by the Bank under sub-clause (*a*) or sub-clause (*b*) of clause (*2*) of section 17 or under section 18 :

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is less.

(*4*) For the purposes of this section, gold coin and gold bullion shall be valued at 8.47512 grains of fine gold per rupee, rupee coin shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.

(*5*) Of the gold coin and gold bullion held as assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies :

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets.

(*6*) For the purposes of this section, the securities of a sterling standard country which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of any of such sterling standard countries as may be specified in this behalf by the Governor-General in Council by notification in the Gazette of India, namely :—

(*a*) balances at the credit of the Issue Department with a bank which is the principal currency authority under the law for the time being in force of such country;

(*b*) bills of exchange bearing two or more good signatures and drawn on and payable at a place in any such country and having a maturity not exceeding ninety days;

(*c*) securities maturing within five years of the Government of any sterling standard country specified in this behalf by the Governor-General in Council by notification in the Gazette of India :

Provided that, for a period of two years from the date on which this Chapter comes into force,—

(*i*) any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section 17, and

(*ii*) sterling securities of the Government of India may be held as part of the assets.

Liabilities of the Issue Department.

34. (*1*) The liabilities of the Issue Department shall be an amount equal to the total of the amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(*2*) For the purposes of this section, any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub-section (*2*) of section 23, be paid by the Issue Department to the Governor-General in Council or the Banking Department, as the case may be; but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor-General in Council.

Initial Assets and Liabilities.

35. On the date on which this Chapter comes into force, the Issue Department shall take over from the Governor-General in Council the liability for all the currency notes of the Government of India for the time being in circulation, and the Governor-General in Council shall transfer to the Issue Department gold coin, gold bullion, securities of sterling standard countries, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33 :

Provided that the total amount of the gold coin, gold bullion and securities of sterling standard countries so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees.

Method of dealing with fluctuations in rupee coin assets.

36. (*1*) After the close of any financial year in which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub-section (*1*) of section 49, is greater than fifty crores of rupees or one-tenth of the total amount of the assets as shown in that account, whichever may be the greater, the Bank may deliver to the Governor-General in Council rupee coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form bank notes, gold or securities :

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and securities of a sterling standard country in the assets does not

at that time exceed one-half of the total assets, a proportion not exceeding two-fifths of such payment shall be in gold coin, gold bullion or such securities of a sterling standard country as may be held as part of the assets under sub-section (6) of section 33.

(2) After the close of any financial year in which the maximum amount of rupee coin held in the assets, as so shown, is less than fifty crores of rupees or one-tenth of the total amount of the assets, as so shown, whichever may be the greater, the Governor-General in Council may deliver to the Bank rupee coin up to the amount of such deficiency, but not without his consent exceeding five crores of rupees, against payment of legal tender value.

Suspension of assets requirements.

37. (1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor-General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or securities of a sterling standard country of less aggregate amount than that required by sub-section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative.

(2) In respect of any period during which the holding of gold coin, gold bullion and securities of a sterling standard country is reduced under sub-section (1), the Bank shall pay to the Governor-General in Council a tax upon the amount by which such holding is reduced below the minimum prescribed by sub-section (2) of section 33; and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent. per annum when such holding exceeds thirty-two and a half per cent. of the total amount of the assets and of a further one and a half per cent. per annum in respect of every further decrease of two and a half per cent. or part of such decrease:

Provided that the tax shall not in any event be payable at a rate less than six per cent. per annum.

Obligations of Government and the Bank in respect of rupee coin.

38. The Governor-General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any new rupees, except through the Bank and as provided in that section; and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor-General in Council under that section.

Obligation to supply different forms of currency.

39. The Bank shall issue rupee coin on demand in exchange for currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906, and it shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or rupee or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor-General in Council shall, subject to the provisions of section 36, supply such rupees or other coins to the Bank on demand. If the Governor-General in Council at any time fails to discharge this duty, the Bank shall be released from its obligation to supply such coins to the public.

Obligation to sell sterling.

40. (1) The Bank shall sell, to any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty-nine sixty-fourths of a penny for a rupee:

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.

41. The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee:

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds.

Cash reserves of scheduled banks to be kept with the Bank.

42. (1) Every bank included in the Second Schedule shall maintain a balance with the Reserve Bank the amount of which shall at no time be less than seven and one-half per cent. of the daily average of the demand, and two and one-half per cent. of the daily average of the time liabilities of such bank in India.

(2) For the purposes of sub-section (1), the daily average of the amounts of the demand and time liabilities of each scheduled bank shall be computed in respect of each period ending on the fifteenth and on the last day of each month.

(3) Every such bank shall send to the Governor General in Council and to the Bank a monthly return, signed by two responsible officers of such bank, showing—

(a) the amounts of its demand and time liabilities respectively in India.

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin respectively,

(d) the amounts of advances made and of bills discounted in India respectively, and

(e) the balance held at the Bank,

at the close of the month to which the return relates.

(4) Every such return shall be sent not later than fourteen days after the close of the month to which it relates, and shall state whether the bank has during that month maintained with the Reserve Bank the minimum balance required by sub-section (1).

(5) Any bank failing to comply with the provisions of sub-section (3) or sub-section (4) shall be liable, on application made by or on behalf of the Governor-General in Council to the principal Civil Court having jurisdiction in a place where an office of the bank is situated, to a penalty of one hundred rupees for each day during which the failure continues.

(6) When it appears from any such monthly return or from a report of the Central Board that any scheduled bank has failed to maintain the minimum balance required by sub-section (1), the Governor-General in Council may call for such further return, or make such inspection of the books and accounts of that bank, as may be necessary to ascertain the amount of the deficiency, if any, and the period during which it has continued; and a bank so in default shall be liable, on application made by or on behalf of the Governor-General in Council to the principal Civil Court having jurisdiction in a place where an office of the bank is situated, to a penalty at a rate per annum which shall be three per cent. above the bank rate on the amount of the deficiency for each day during which the default has continued, and shall be raised to five per cent. above the bank rate after the first seven days of the deficiency.

(7) The Governor-General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any company, not already so included, which carries on the business of banking in British India and which—

(a) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or company incorporated by or under any law in force in any place outside British India, and

(b) has a paid up capital and reserves of an aggregate value of not less than three lakhs of rupees;

and shall, by a like notification, direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up capital and reserves at any time becomes less than three lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

Agreement with the Imperial Bank.

43. The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor-General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for twenty-five years, and shall further contain the provisions set forth in the Third Schedule.

CHAPTER IV.

General Provisions.

Allocation of surplus.

44. After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor-General in Council may fix at the time of the issue of shares, the surplus shall be allocated as follows :—

(a) one-half to a Reserve Fund, until such Reserve Fund is equal to one-half of the share capital, and the remaining one-half to the Governor-General in Council;

(b) thereafter, until the Reserve Fund is equal to the share capital, one-tenth to the Reserve Fund, and the balance to the Governor-General in Council; and

(c) when and for so long as the Reserve Fund is not less than the share capital, a portion to an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule, and the balance to the Governor-General in Council :

Provided that, so long as the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount, shall be allocated to the Reserve Fund.

Publication of bank rate.

45. The Bank shall make public from time to time the minimum rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act.

Auditors.

46. (1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be share-holders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office.

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections :

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Appointment of special auditors by Government.

47. Without prejudice to anything contained in section 46, the Governor-General in Council may at any time appoint such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Powers and duties of auditors.

48. (1) Every auditor shall be supplied with a copy of the annual balance sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto; and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor-General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the shareholders or to the Governor-General in Council, as the case may be, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read, together with the report of the Central Board, at the annual general meeting.

Returns.

49. (1) The Bank shall prepare and transmit to the Governor-General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form as the Governor-General in Council may, by notification in the Gazette of India, prescribe. The Governor-General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor-General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors, and the Governor-General in Council shall cause such accounts to be published in the Gazette of India.

(3) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor-General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank.

Power to require declaration as to ownership of registered shares.

50. (1) The Local Board of any area may at any time require any share-holder who is registered on the Register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said Register of which he is the owner.

(2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name, the Local Board may amend the Register accordingly.

(3) If any person required to make a declaration under sub-section (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the Register recording

such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that Register.

(4) Whoever makes a false statement in any declaration furnished by him under sub-section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 192 of that Code.

Liquidation of the Bank.

51. (1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in voluntary or compulsory liquidation save with the sanction of the Governor-General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor-General in Council and the shareholders in the proportion of seventy-five per cent. and twenty-five per cent., respectively.

Power of the Central Board to make regulations.

52. (1) The Central Board may, with the previous sanction of the Governor-General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(*a*) the holding and conduct of elections under this Act, including, if the Central Board thinks fit, provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote;

(*b*) for the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections;

(*c*) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders;

(*d*) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised;

(*e*) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons;

(*f*) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof;

(*g*) the conduct of business of Local Boards and the delegation to such Boards of powers and functions;

(*h*) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank;

(*i*) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees;

(*j*) the constitution and management of staff and superannuation funds for the officers and servants of the Bank;

(*k*) the manner and form in which contracts binding on the Bank may be executed;

(*l*) the provision of an official seal of the Bank and the manner and effect of its use;

(*m*) the manner and form in which the balance sheet of the Bank shall be drawn up, and in which the accounts shall be maintained;

(*n*) the circumstances in which, and the conditions and limitations subject to which, the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and

(*o*) generally, for the efficient conduct of the business of the Bank.

Amendment of Act III of 1906.

53. In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely :—

Demonetisation of sovereign and half-sovereign.

"11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices and agencies in India at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee."

Repeals.

54. The Indian Paper Currency Act, 1923, the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927, are hereby repealed.

THE FIRST SCHEDULE.

[*See section 4.*]

AREAS SERVED BY THE VARIOUS SHARE REGISTERS.

I. The *Western Area*, served by the *Bombay* Register, shall consist of—

the Bombay Presidency including Sind, the Central Provinces, Berar, Hyderabad, Baroda, Khairpur, the Western India States, the Central India States (including Makrai but excluding Rewah and other States of Bundelkhand and Baghelkhand), the Gujerat States, Kolhapur and the Deccan States.

II. The *Eastern Area*, served by the *Calcutta* Register, shall consist of—

the Bengal Presidency, Bihar and Orissa, Assam, Sikkim, Manipur, Cooch-Behar, Tripura, the Eastern States, Rewah and other States of Bundelkhand and Baghelkhand, and the Khasi States.

III. The *Northern Area*, served by the *Delhi* Register, shall consist of—

the United Provinces, Delhi, the Punjab, the North-West Frontier Province, Ajmer-Merwara, Baluchistan, Kashmir, the Punjab States excluding Khairpur, the Simla Hill States, Dujana, Pataudi, Kalsia, Rampur, Tehri-Garhwal, Benares, the Rajputana States including Papanpur and Danta, Gwalior, Khaniadhana, Kalat, Las Bela, Hunza, Nagir, Amb, Chitral, Dir, Phulera and Swat.

IV. The *Southern Area*, served by the *Madras* Register, shall consist of—

the Madras Presidency, Coorg, Mysore and the Madras States.

V. The *Burma Area*, served by the *Rangoon* Register, shall consist of—

Burma, the Andaman and Nicobar Islands, Bawlake, Kantarawadi, and Kyebogyi.

U. Rai Gyaw Thoo & Co., Akyab.
Yokohama Specie Bank.

THE THIRD SCHEDULE.

(See section 43.)

Provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India.

1. The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where, at the commencement of the Reserve Bank of India Act, 1933, there is a branch of the Imperial Bank of India and no branch of the Banking Department of the Reserve Bank of India.

2. In consideration of the performance by the Imperial Bank of India on behalf of the Reserve Bank of India of the functions which the Imperial Bank of India was performing on behalf of the Governor-General in Council at the places referred to in clause 1 before the coming into force of the Reserve Bank of India Act, 1933, the Reserve Bank of India shall pay to the Imperial Bank of India a commission calculated on the total of the receipts and disbursements dealt with annually on account of Government by the Imperial Bank of India on behalf of the Reserve Bank of India. Such commission shall be one-sixteenth of one per cent. on the first 250 crores of such total and one-thirty-second of one per cent. on the remainder.

3. Subject to the condition that the Imperial Bank of India shall keep open branches not less in number than those existing at the time of the coming into force of the Reserve Bank of India Act, 1933, the Reserve Bank of India shall allow the following balances to the Imperial Bank of India at the interest rates hereinafter specified, namely :—

(*a*) during the first five years from that time—3 crores free of interest;

(*b*) during the next five years—2 crores free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 1 crore at 2 per cent. per annum;

(*c*) during the next five years—1 crore free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 2 crores at 2 per cent. per annum; and

(*d*) during the next five years—at the option of the Imperial Bank of India, an amount not exceeding 3 crores at 2 per cent. per annum.

4. The Imperial Bank of India shall not without the approval of the Reserve Bank of India open any branch in substitution of a branch existing at the time this agreement comes into force.

THE FOURTH SCHEDULE.

(See section 44.)

Scale of additional dividend payable to shareholders.

A. If the maximum rate of dividend fixed under section 44 is five per centum and so long as the share capital of the Bank is five crores of rupees—

(1) if the surplus does not exceed four crores of rupees—*Nil;*

(2) if the surplus exceeds four crores of rupees—

(*a*) out of such excess up to the first one and a half crores of rupees—a fraction equal to one-sixtieth;

(*b*) out of each successive additional excess up to one and a half crores of rupees—one-half of the fraction payable out of the next previous one and a half crore of excess :

Provided that the additional dividend shall be a multiple of one-eighth of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

B. If the maximum rate of dividend fixed under section 44 is below five per centum, the said fraction of one-sixtieth shall be increased in the ratio of the difference between six and the fixed rate to unity.

C. When the original share capital of the Bank has been increased or reduced, the said fraction of one-sixtieth shall be increased or diminished in proportion to the increase or reduction of the share capital.

THE FIFTH SCHEDULE.

(See section 49.)

RESERVE BANK OF INDIA.

An Account pursuant to the Reserve Bank of India Act, 1933, for the week ending on the day of

Ratio of total of A to liabilities, per cent.

Dated the

day of 19 .

such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that Register.

(4) Whoever makes a false statement in any declaration furnished by him under sub-section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 192 of that Code.

Liquidation of the Bank.

51. (1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in voluntary or compulsory liquidation save with the sanction of the Governor-General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor-General in Council and the shareholders in the proportion of seventy-five per cent. and twenty-five per cent., respectively.

Power of the Central Board to make regulations.

52. (1) The Central Board may, with the previous sanction of the Governor-General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(a) the holding and conduct of elections under this Act, including, if the Central Board thinks fit, provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote;

(b) for the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections;

(c) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders;

(d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised;

(e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons;

(f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof;

(g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions;

(h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank;

(i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees;

(j) the constitution and management of staff and superannuation funds for the officers and servants of the Bank;

(k) the manner and form in which contracts binding on the Bank may be executed;

(l) the provision of an official seal of the Bank and the manner and effect of its use;

(m) the manner and form in which the balance sheet of the Bank shall be drawn up, and in which the accounts shall be maintained;

(n) the circumstances in which, and the conditions and limitations subject to which, the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and

(o) generally, for the efficient conduct of the business of the Bank.

Amendment of Act III of 1906.

53. In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely :—

Demonetisation of sovereign and half-sovereign.

"11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices and agencies in India at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee."

Repeals.

54. The Indian Paper Currency Act, 1923, the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927, are hereby repealed.

THE FIRST SCHEDULE.

[*See section 4.*]

AREAS SERVED BY THE VARIOUS SHARE REGISTERS.

I. The *Western Area*, served by the *Bombay* Register, shall consist of—

the Bombay Presidency including Sind, the Central Provinces, Berar, Hyderabad, Baroda, Khairpur, the Western India States, the Central India States (including Makrai but excluding Rewah and other States of Bundelkhand and Baghelkhand), the Gujerat States, Kolhapur and the Deccan States.

II. The *Eastern Area*, served by the *Calcutta* Register, shall consist of—

THE THIRD SCHEDULE.

(See section 43.)

Provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India.

1. The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where, at the commencement of the Reserve Bank of India Act, 1933, there is a branch of the Imperial Bank of India and no branch of the Banking Department of the Reserve Bank of India.

2. In consideration of the performance by the Imperial Bank of India on behalf of the Reserve Bank of India of the functions which the Imperial Bank of India was performing on behalf of the Governor-General in Council at the places referred to in clause 1 before the coming into force of the Reserve Bank of India Act, 1933, the Reserve Bank of India shall pay to the Imperial Bank of India a commission calculated on the total of the receipts and disbursements dealt with annually on account of Government by the Imperial Bank of India on behalf of the Reserve Bank of India. Such commission shall be one-sixteenth of one per cent. on the first 250 crores of such total and one-thirty-second of one per cent. on the remainder.

3. Subject to the condition that the Imperial Bank of India shall keep open branches not less in number than those existing at the time of the coming into force of the Reserve Bank of India Act, 1933, the Reserve Bank of India shall allow the following balances to the Imperial Bank of India at the interest rates hereinafter specified, namely :—

(*a*) during the first five years from that time—3 crores free of interest;

(*b*) during the next five years—2 crores free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 1 crore at 2 per cent. per annum;

(*c*) during the next five years—1 crore free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 2 crores at 2 per cent. per annum; and

(*d*) during the next five years—at the option of the Imperial Bank of India, an amount not exceeding 3 crores at 2 per cent. per annum.

4. The Imperial Bank of India shall not without the approval of the Reserve Bank of India open any branch in substitution of a branch existing at the time this agreement comes into force.

THE FOURTH SCHEDULE.

(See section 44.)

Scale of additional dividend payable to shareholders.

A. If the maximum rate of dividend fixed under section 44 is five per centum and so long as the share capital of the Bank is five crores of rupees—

(1) if the surplus does not exceed four crores of rupees—*Nil;*

(2) if the surplus exceeds four crores of rupees—

(*a*) out of such excess up to the first one and a half crores of rupees—a fraction equal to one-sixtieth;

(*b*) out of each successive additional excess up to one and a half crores of rupees—one-half of the fraction payable out of the next previous one and a half crore of excess :

Provided that the additional dividend shall be a multiple of one-eighth of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

B. If the maximum rate of dividend fixed under section 44 is below five per centum, the said fraction of one-sixtieth shall be increased in the ratio of the difference between six and the fixed rate to unity.

C. When the original share capital of the Bank has been increased or reduced, the said fraction of one-sixtieth shall be increased or diminished in proportion to the increase or reduction of the share capital.

THE FIFTH SCHEDULE.

(See section 49.)

day of 19 .

STATEMENT OF OBJECTS AND REASONS.

The object of this Bill is to set up a Reserve Bank for India. The Federal Structure Sub-Committee of the first Round Table Conference recommended that "with a view to ensuring confidence in the management of Indian credit and currency . . . . efforts should be made to establish on sure foundations and free from any political influence, as early as may be found possible, a Reserve Bank, which will be entrusted with the management of the currency and exchange". The Financial Safeguards Committee of the third Round Table Conference recommended "that steps should be taken to introduce into the Indian Legislature a Reserve Bank Bill conceived on the above lines as soon as possible". In the report of that Committee it was also placed on record that "the Secretary of State undertook that representative Indian opinion would be consulted in the preparation of proposals for the establishment of the Reserve Bank including those relating to the reserves".

2. A representative Committee was set up in order to give effect to that undertaking and a copy of its report is attached as an annexure. The present Bill is drafted in accordance with the recommendations of that Committee.

GEORGE SCHUSTER.

SIMLA;

The 4th September, 1932.

NOTES OF THE CLAUSES.

[In these Notes "Report" means the report of the Committee on Indian Reserve Bank Legislation, 1933, and "1928 Bill" means the Gold Standard and Reserve Bank of India Bill, 1928.]

Preamble.—The wording is intended to give effect to paragraph 19 of the Report.

Clause 1 reproduces clause 1 of the 1928 Bill with the following alterations :—

(*a*) In sub-clause (*3*) the date and the proviso giving dates for postponement have been omitted.

(*b*) Sub-clause (*4*) has been drafted in pursuance of the Committee's recommendation relating to this sub-clause, contained in Appendix 1 to the Report. Their intention was to provide a statutory assurance to the Bank when constituted that the provisions of Chapter III, relating to its central banking functions, would remain in operation for a period of not less than twenty-five years. It is recognised, however, that the sub-clause is inoperative as it cannot bind the Legislature in the future; and it will be for consideration at a later stage whether this assurance would not be more suitably expressed in clause 50, in the form of a limitation on the power of the Governor General in Council to grant sanction to the liquidation of the Bank.

Clause 2 follows clause 2 of the 1928 Bill. Some of the definitions have been omitted as unnecessary. The only alteration of substance is in sub-clause (*d*), where the definition of a gold standard country has been replaced by that of a sterling standard country, *vide* Appendix I of the Report [Note on clause 2 (*g*) of the 1928 Bill].

Clause 4 follows clause 4 of the 1928 Bill with alterations made in accordance with paragraphs 3, 4 and 14 of the Report. In sub-clause (*5*) the distribution is as indicated in paragraphs 6 and 7 of the Report and the Rangoon register has been retained, *vide* paragraph 2 of the Report. Sub-clause (*6*) has been drafted with a view to giving effect to the intention of the Report and will require special consideration in the Joint Committee.

Clause 6 has been altered so as to make the establishment of a London branch optional, *vide* paragraph 8 of the Report.

Clauses 8 to 13 reproduce the proposals for the constitution of the Central Board, the method of election, the qualifications and disqualifications of candidates, the method of filling casual vacancies, and the provision for Local Boards, indicated in paragraphs 5 to 13 of the Report under the general head "The Board of the Bank". The opportunity has also been taken to rearrange clauses 8 to 13 of the 1928 Bill so as to make the arrangement clearer.

Clause 9 is new : it embodies the recommendations regarding Local Boards in paragraph 9 of the Report, and replaces the scheme of electoral colleges contained in clause 10 of the 1928 Bill.

Clause 10 embodies the recommendations in paragraphs 10 and 11 of the Report. It follows clause 8 of the 1928 Bill *mutatis mutandis*.

Clause 11 is drafted to give effect in a practical form to the intentions of the comments in Appendix I of the Report on clause 11 (*1*) of the 1928 Bill.

Clause 12.—Sub-clause (*3*) has been drafted so as to give effect to the recommendation in the last sentence of paragraph 7 of the Report.

The rule-making powers contained in clause 13 of the 1928 Bill have been given to the Central Board and transferred to clause 52, where they appear as clauses (*a*) and (*b*) of sub-clause (*2*) (vide notes in Appendix I of the Report on that clause).

Clause 13.—Sub-clause (*2*) is new, and fills what appears to have been an omission from the 1928 Bill.

Clause 15 reproduces clause 16 of the 1928 Bill with the necessary modifications to give effect to the recommendations of paragraph 12 of the Report, and the different method for the election of Directors now proposed.

Sub-clause (*4*) represents an attempt to provide "suitable arrangements . . . . . for retirement by rotation" as recommended in paragraph 12 of the Report.

Clause 17 reproduces clause 17 of the 1928 Bill with the inclusion of the points made in Appendix I of the Report.

Clause 18 reproduces clause 18 of the 1928 Bill with the addition of provision designed to meet the recommendation in the last sentence of paragraph 18 of the Report.

Clause 30 reproduces clause 43 of the 1928 Bill; it is placed here so as to make the arrangement clearer.

Clause 33 reproduces clause 31 of the 1928 Bill with the following alterations :—

(*a*) Sub-clause (*2*) incorporates the provision regarding gold suggested in paragraph 24 of the Report.

(*b*) Sub-clause (*3*)—Holding of Government of India rupee securities.—The provisions of the 1928 Bill have been followed without alteration for the present, but the point raised in paragraph 22 of the Report is reserved for consideration in Joint Committee.

(*c*) Sub-clause (*4*).—For the time being gold has been valued on the principle recommended in paragraph 25 of the Report, the question of the allocation of the profits, if any, on realization or revaluation being left for later consideration. This will properly be dealt with in a separate agreement between Government and the Reserve Bank. This point is reserved for consideration at the Committee stage.

(*d*) Sub-clause (*6*) (*c*).—Gold securities have been replaced by sterling securities as recommended in paragraph 28 of the Report.

Clause 34 reproduces clause 32 of the 1928 Bill with the modifications regarding the Rupee Redemption Fund indicated in paragraph 21 of the Report.

Clause 36 is new, replacing clauses 34 and 35 of the 1928 Bill. It embodies the recommendations of the Committee in paragraph 21 regarding the transfer of rupee coin between Government and the Bank.

Clause 37 reproduces clause 41 of the 1928 Bill. It has been transferred here for the purpose recommended in paragraph 26 of the Report.

Clauses 40 and 41 contain the new provisions regarding the purchase and sale of sterling exchange, *vide* paragraphs 19 and 20 of the Report. Clause 40 of course takes the place of clauses 38 and 39 of the 1928 Bill providing for the obligation to sell gold or gold exchange. Clause 40 of the 1928 Bill has been omitted as it would be inoperative.

Clause 42 reproduces clause 44 of the 1928 Bill without alteration, the principle of this clause having been approved in paragraph 28 of the Report. The detailed application of this principle, however, must receive careful consideration as recommended in paragraph 28 and the Committee stage will offer a convenient opportunity for this.

Clause 43 reproduces the old clause 45, *vide* paragraphs 29 and 31 of the Report. The Second Schedule giving the arrangements to be made with the Imperial Bank has also been left unaltered for the present but will be another matter for consideration in Joint Committee.

Clause 44 reproduces clause 46 of the old Bill but the Fourth Schedule (old Schedule Three) has been modified so as to provide for a maximum 6 per cent. dividend—*vide* paragraph 27 of the Report; *vide* also note on the Fourth Schedule.

Clause 50.—This represents a tentative working out of the suggestion contained in the note on clause 15 (*2*) in Appendix I to the Report. The subject presents serious difficulties which will have to be considered at a later stage.

Clause 52.—Certain modifications and additions have been made in the regulation-making powers (*vide* note on clause 13 of the 1928 Bill *ante*).

The First Schedule.—This has been framed in accordance with the recommendations in paragraph 7 of the Report. Appendix II of the Report has been amplified, in accordance with current distribution and nomenclature.

The Second Schedule.—The First Schedule of the 1928 Bill has been brought up to date in accordance with the latest information available. It may, however, be altered in the light of later information before the Bill comes up for final consideration.

The Fourth Schedule (*vide* note on clause 44) provides for a maximum dividend of six per cent. to be reached by stages diminishing by fifty per cent. successively with a minimum rise of $\frac{1}{8}$ per cent. Thus, if the fixed minimum dividend is five per cent., it will be raised to $5\frac{1}{2}$ per cent. if the distributable surplus rises to $5\frac{1}{2}$ crores, to $5\frac{3}{4}$ per cent. if it rises to 7 crores, and so on. If the fixed minimum is 4 per cent., the stages will be 5 per cent., $5\frac{1}{2}$ per cent., and so on. This follows the provisions of the Third Schedule of the 1928 Bill, except for the fact that the 1928 Schedule provided for a maximum dividend of seven per cent.

The Fifth Schedule reproduces the Fourth Schedule of the 1928 Bill with the alterations necessitated by the modifications in the body of the Bill.

MD. RAFI,
Offg. Secy. to the Govt. of India.

IMPERIAL BANK OF INDIA AMENDMENT BILL, 1933

FURTHER TO AMEND THE IMPERIAL BANK OF INDIA ACT, 1920, FOR CERTAIN PURPOSES.

Whereas by reason of the constitution of the Reserve Bank of India it is expedient further to amend the Imperial Bank of India Act, 1920, in order to modify the control of the Governor General in Council over the management of the Bank, to remove certain restrictions on the transaction of business by the Bank, and to provide for an agreement between the Bank and the Reserve Bank of India; It is hereby enacted as follows :—

Short title and commencement.

1. (*1*) This Act may be called the Imperial Bank of India (Amendment) Act, 1933.

(*2*) It shall come into force on such date as the Governor General in Council may, by notification in the Gazette of India, appoint.

Amendment of section 2, Act XLVII of 1920.

2. After clause (*i*) of section 2 of the Imperial Bank of India Act, 1920 (hereinafter referred to as the said Act), the following clause shall be inserted, namely :—

"(*ii*) 'secretary' and 'deputy secretary' mean, respectively, the secretary and treasurer and the deputy secretary and treasurer of the Bank."

Repeal of section 9, Act XLVII of 1920.

3. Section 9 of the said Act is hereby repealed.

Amendment of section 10, Act XLVII of 1920.

4. (*1*) In sub-section (*1*) of section 10 of the said Act,—

(*a*) for the words "the Secretary of State for India in Council" the words "the Reserve Bank of India" shall be substituted;

(*b*) in clause (i), the words "to act as banker for, and" shall be omitted, and after the word "securities" the words "as agent for the Reserve Bank of India" shall be inserted; and

(*c*) in clause (ii), for the words "the Government" the words "the Reserve Bank of India" shall be substituted.

(*2*) In sub-section (*2*) of the same section, clause (*a*) and the brackets and letter "(*b*)" shall be omitted.

Amendment of section 12, Act XLVII of 1920.

5. In clause (*a*) of section 12 of the said Act, after the words "at such places" the words "whether in India or elsewhere," shall be inserted.

Amendment of section 13, Act XLVII of 1920.

6. In sub-section (*1*) of section 13 of the said Act, after the words "in India" the words "or elsewhere" shall be inserted, and the Explanation after sub-section (*2*) shall be omitted.

Amendment of section 23, Act XLVII of 1920.

7. In section 23 of the said Act, the words ",with the previous sanction of the Governor General in Council," and the words "The Bank may also, subject to the provisions of this Act as to the business to be transacted there, establish an office in London" shall be omitted.

Amendment of section 25, Act XLVII of 1920.

8. In section 25 of the said Act, the words "with the previous sanction of the Governor-General in Council," shall be omitted.

Substitution of new section for section 28, Act XLVII of 1920.

9. For section 28 of the said Act the following section shall be substituted, namely :—

Constitution of Central Board.

"28. (*1*) The Central Board shall consist of the following Governors, namely :—

(*i*) the president and vice-presidents of the Local Boards established by this Act;

(*ii*) a Managing Governor who shall be appointed by the Central Board for a period not exceeding five years on such terms as the Central Board may direct, and may be continued in his appointment by the Central Board for such further periods not exceeding five years in each case as the Central Board thinks fit;

(*iii*) a Deputy Managing Governor who shall be appointed by the Central Board;

(*iv*) the secretaries of the Local Boards established by this Act; and

(*v*) if any Local Board is hereafter established under this Act, such number of persons to represent it as the Central Board may prescribe.

(*2*) The Governors specified in clauses (*iii*) and (*iv*) of sub-section (*1*) shall be at liberty to attend all meetings of the Central Board and to make part in its deliberations, but shall not be entitled to vote on any question arising at any meeting :

Provided that the Deputy Managing Governor shall be entitled to vote in the absence of the Managing Governor."

Repeal of section 30, Act XLVII of 1920.

10. Section 30 of the said Act is hereby repealed.

Amendment of Schedule 1, Act XLVII of 1920.

11. (*1*) In Part I of Schedule I to the said Act, the following amendments shall be made, namely :—

(*a*) in sub-clause (*iii*) of clause (*a*), after the words "a district board" the words "or a municipal board or committee or, with the sanction of the Governor General in Council, debentures or other securities for money issued under the authority of a Prince or Chief of any State in India" shall be inserted;

(*b*) after sub-clause (*iii*) of the same clause the following sub-clause shall be inserted, namely :—

"(*iiia*) subject to any general or special directions of the Central Board, fully paid shares and debentures of companies with limited liability whether registered in India or elsewhere;";

(*c*) for sub-clause (*iv*) of the same clause the following sub-clause shall be substituted, namely :

"(*iv*) goods which, or the documents of title to which, are deposited with, or pledged, hypothecated, assigned or transferred to, the Bank as security for such advances, loans or credits;";

(*d*) in sub-clause (*vi*) of the same clause, the words "fully paid shares and debentures of companies with limited liability, or" shall be omitted;

(*e*) in clause (*b*), for the words "assigned to" the words "or pledged, hypothecated, assigned or transferred to" shall be substituted, and for the words "or assignment the words ", pledge, hypothecation, assignment or transfer" shall be substituted;

(*f*) in clause (*d*), the words beginning with the words "payable in India, or in Ceylon" and ending with the words "may approve in that behalf" shall be omitted;

(*g*) in clause (*f*), the words "made payable in India, or in Ceylon," shall be omitted;

(*h*) in clause (*j*), after the word "claims" the following shall be added, namely :—

", and the acquisition and holding of, and generally the dealing with, any right, title or interest in any property, moveable or immoveable, which may be the Bank's security for any loan or advance or may be connected with any such security";

(*i*) in clause (*l*), for the words "the acting as administrator, executor or trustee for the purpose of winding up estates" the words "the administration of estates for any purpose whether as an executor, trustee or otherwise" shall be substituted;

(*j*) in sub-clause (*iii*) of clause (*l*), the words "at the risk of the principal" shall be omitted;

(*k*) in clause (*m*), the words beginning with the words "for the use of" and ending with the words "personal needs" shall be omitted;

(*l*) in clause (*n*), the words ", for the purpose of meeting such bills or letters of credit," shall be omitted;

(*m*) in clause (*o*), the words "in India" shall be omitted;

(*n*) for clause (*p*) the following clause shall be substituted, namely :—

"(*p*) the subsidizing from time to time of the pension funds of the Presidency Banks;";

(*o*) in clause (*q*), after the words "kinds of business" the words ", including foreign exchange business," shall be inserted.

(2) In clause (4) of Part II of the same Schedule, after the words "negotiable security" the following brackets and words shall be inserted, namely :—

"(not being a security in which a trustee may invest trust money under section 20 of the Indian Trusts Act, 1882)".

Amendment of regulation 10, Schedule II, Act XLVII of 1920.

12. In regulation 10 in Schedule II to the said Act (which Schedule is hereinafter referred to as the said Schedule),—

(*a*) the words "not being fully paid shares" shall be omitted, and

(*b*) after the words "does not approve" the following shall be inserted, namely :—

"or to any person who is a minor or has been found by a Court of competent jurisdiction to be of unsound mind or to or in the name of any firm".

Substitution of new regulation for regulation 11, Act XLVII of 1920.

13. For regulation 11 in the said Schedule, the following regulation shall be substituted, namely :—

Deceased shareholders.

"11. The executors or administrators of a deceased shareholder of a share, the holder of a succession certificate issued under Part X of the Indian Succession Act, 1925, in respect of the share, and a person in whose favour a valid instrument of transfer of the share was executed by the deceased holder during his lifetime, shall be the only persons who may be recognised by the Bank as having any title to the share. In the case of a share registered in the names of two or more holders, the survivors or survivor and, on the death of the last survivor, his executors or administrators or any person who is the holder of a succession certificate in respect of such survivor's interest in the share, and a person in whose favour a valid instrument of transfer of the share was executed by such survivor during his lifetime, shall be the only persons who may be recognised by the Bank as having any title to the share."

Amendment of regulation 12, Schedule II, Act XLVII of 1920.

14. In regulation 12 in the said Schedule,—

(*a*) after the word "shareholder", where it first occurs, the words "or in consequence of a transfer by a deceased shareholder during his lifetime" shall be inserted;

(*b*) after the words "have the right" the words ", subject to the provisions of regulation 10," shall be inserted; and

(*c*) the words beginning with "but the Bank shall" and ending with "before the death or insolvency" shall be omitted.

Amendment of regulation 19, Schedule II, Act XLVII of 1920.

15. In regulation 19 of the said Schedule, the words "and with the previous sanction of the Governor General in Council" shall be omitted, and after the words "increase or" the words ", with the previous sanction of the Governor General in Council," shall be inserted.

Amendment of regulation 23, Schedule II, Act XLVII of 1920.

16. In regulation 23 in the said Schedule in sub-regulation (2), for the words "a Managing Governor" the words "the Managing Governor or Deputy Managing Governor" shall be substituted.

Substitution of new regulation for regulation 24, Schedule II, Act XLVII of 1920.

17. For regulation 24 in the said Schedule the following regulation shall be substituted, namely :—

Special meetings.

"24. (1) The Central Board shall convene a special meeting on the requisition of any three Governors or of not less than one hundred shareholders holding shares of the aggregate amount of not less than five hundred thousand rupees, upon which all calls or other sums due have been paid, if such requisition is signed by the requisitionists and addressed to the Managing Governor or Deputy Managing Governor and contains a statement of the object of the proposed meeting.

(2) The requisition may consist of several documents in like form, each signed by one or more of the requisitionists.

(3) Sixty days' previous notice of any such meeting shall be given by the Central Board under the hand of not less than three Governors, and shuch notice shall state the purpose for which the meeting is convened and the time and place of such meeting, and shall be advertised in the Gazette of India and in not less than three daily newspapers, of which one shall be a newspaper published in the vernacular :

Provided that not less than three months' previous notice shall be thus given of any special meeting held for the purpose of increasing or reducing the capital of the Bank."

Amendment of regulation 26, Schedule II, Act XLVII of 1920.

18. In regulation 36 in the said Schedule, after the words "power or authority," the following words shall be inserted, namely :—

"or, in the case of a power of attorney previously deposited and registered with any local head office, a certificate of the secretary of such local head office as to such deposit and registration,".

Amendment of regulation 38, Schedule II,

19. In regulation 38 in the said Schedule, for the words "Managing Governors" the words "the Managing Governor or Deputy Managing Governor" shall be substituted.

Amendment of regulation 39, Schedule II, Act XLVII of 1920.

20. In regulation 39 in the said Schedule,—

(*a*) in the proviso to sub-regulation (*1*), the words "or is nominated or appointed by the Governor General in Council" shall be omitted;

(*b*) in sub-regulation (1), the words beginning with the words "Provided that" and ending with the word and figures "section 28;" shall be omitted; and

(*c*) in sub-regulation (*3*), the words "or of the Central Board and a Local Board" shall be omitted.

Amendment of regulation 40, Schedule II, Act XLVII of 1920.

21. In regulation 40 in the said Schedule, the brackets and words "(other than a Governor nominated or appointed by the Governor General in Council)" shall be omitted.

Amendment of regulation 42, Schedule II, Act XLVII of 1920.

22. In regulation 42 in the said Schedule, for the words "a Managing Governor", wherever they occur, the words "the Managing Governor or Deputy Managing Governor" shall be substituted; and in sub-regulation (*1*), for the words "at every local head office established by this Act" the words "at each of the local head offices established at Calcutta, Bombay and Madras" shall be substituted.

Amendment of regulation 44, Schedule II, Act XLVII of 1920.

23. For sub-regulation (*1*) of regulation 44 in the said Schedule the following shall be substituted, namely :—

"(*1*) At the first meeting of the Local Board which takes place after the first meeting of the Central board in each year, the Local Board shall elect from among its members a president and a vice-president who shall continue in their respective offices until the first meeting of the Local Board after the first meeting of the Central Board in the following year, and, whenever the office of president or vice-president becomes vacant, the Local Board shall at its next meeting elect a successor who shall hold office for the unexpired portion of the period for which his predecessor was appointed :

Provided that no person shall be elected to be president or vice-president more than twice in succession.

Amendment of regulation 49, Schedule II, Act XLVII of 1920.

24. In regulation 49 in the said Schedule,—

(*a*) in sub-regulation (*1*), for the words "a Managing Governor" the words "the Managing Governor or Deputy Managing Governor" shall be substituted;

(*b*) in sub-regulation (*5*), after the words "secretary" the words "or deputy secretary" shall be inserted.

Amendment of regulation 50, Schedule II, Act XLVII of 1920.

25. In clause (*b*) of regulation 50 in the said Schedule, after the word "servants" the following shall be inserted, namely :—

"and to grant gratuities or other financial assistance, either temporary or permanent, to widows, children or other departments of deceased officers or servants".

Amendment of regulation 51, Schedule II, Act XLVII of 1920.

26. In regulation 51 in the said Schedule, for the word "Governors" the words "Governor and Deputy Managing Governor", and for the word "employees" shall be substituted.

27. In regulation 54 in the said Schedule, for sub-regulation (*3*) the following shall be substituted, namely :—

(*3*) The statement of the balance shall contain the particulars and shall be in the form required by section 132 of the Indian Companies Act, 1913, and the provisions of that section and of section 136 of the same Act shall apply to the Bank in like manner as they apply to a banking company."

Amendment of regulation 51, Schedule II, Act XLVII of 1920.

28. In sub-regulation (*2*) of regulation 59 in the said Schedule, for the words in the proviso "a special meeting shall be called for the purpose of supplying the same" the words "the vacancy may be filled by th Central Board" shall be substituted.

Insertion of new regulation 60A in Schedule II, Act XLVII of 1920.

29. After regulation 60 in the said Schedule the following regulation shall be inserted, namely :—

Liquidation

"60A. Notwithstanding anything contained in this Act or in section 271 of the Indian Companies Act, 1913, if the shareholders of the Bank pass a special resolution that the Bank be wound up voluntarily under the provisions of the Indian Companies Act, 1913, the Bank shall be wound up in accordance with the provisions of that Act with regard to the voluntary winding up of a company :

Provided that, for the purposes of this section, no such special resolution shall be deemed to have been passed unless at least one-third of the shareholders holding at least one-half of the paid-up capital of the Bank for the time being be present in person or by proxy and a majority poll by open voting in favour of the said resolution and such resolution is thereafter confirmed by a majority of the shareholders at a subsequent special meeting held at an interval of not less than two months or more than three months from the date of the meeting at which the resolution was first passed."

30. For regulation 62 in the said Schedule the following regulation shall be substituted, namely :—

Substitution of new regulation for regulation 62, Schedule II, Act XLVII of 1920

30. For regulation 62 in the said Schedule the following regulation shall be substituted, namely :—

Absence of registered address

"62. A shareholder who has no registered address in British India and has not supplied to the Bank an address for the giving of notices to him shall not be entitled to any notice, notwithstanding anything contained in this Act."

Temporary saving existing Central Board.

31. Notwithstanding any amendment made in the said Act by this Act in regard to the manner in which the Central Board shall be constituted, the Central Board existing at the commencement of this Act shall, until it has been re-established in accordance with the said Act as amended by this Act, continue to transact business and shall have all the powers of the Central Board under the said Act as so amended.

STATEMENT OF OBJECTS AND REASONS

It has been recognised, since the plan of setting up a Reserve Bank for India was first considered, that, with the transfer to a Reserve Bank of the

purely central banking functions which are at present performed by the Imperial Bank of India, the latter should be freed from some of the restrictions which are at present imposed upon it. Accordingly, when the Reserve Bank of India Bill of 1927 was introduced on January 14, 1927, there was also simultaneously introduced an Imperial Bank of India Act (1920) Amendment Bill which was designed to remove some of those restrictions and to modify the control of Government over the operations of the Bank. It is considered expedient that the same practice should now be followed.

2. The more important provisions of the Imperial Bank of India Bill of 1927 have been retained in the present Bill, and are as follows :—

(*a*) to replace section 10 of the Imperial Bank of India Act by another authorising the bank to enter into an agreement with the Reserve Bank of India to conduct Government business as agent of the Reserve Bank;

(*b*) to remove the limitation imposed by section 9 on the business which the bank may transact at its London office and to give specific powers to the bank to open branches outside India, in London and elsewhere;

(*c*) to give the bank extended powers in regard to its internal business and to remove restrictions on the foreign exchange business which the bank may transact.

(*d*) At present the Controller of the Currency is an *ex-officio* member of the Central Board of the bank and the Governor General in Council nominates four other members to the Board under section 28 of the Imperial Bank of India Act. Although the Imperial Bank of India will transact Government business as the agent of the Reserve Bank, it will have no direct connection with the Government and it seems unnecessary for the Government to retain any measure of control over the operations of the bank by the appointment of the members to the Board. It is therefore proposed to remove the right of the Governor General in Council to appoint such members.

(*e*) The Governor-General in Council is now entitled under Regulation 54 of the Imperial Bank of India Act to require of the Central Board of the bank any information touching the affairs of the bank and the production of any documents of the bank, and he may also require the publication of such statements of its assets and liabilities in such form and at such intervals as he thinks fit. It is proposed to remove this power from the Governor-General in Council, but, in order that he may be in a position to examine the affairs of the bank in case of necessity, the provision by which he may appoint auditors under regulation 59 to examine and report on the accounts of the Bank is proposed to be maintained.

It is to be noted that this last mentioned provision may be necessary in order to make effective the recommendation in paragraph 29 of the Report of the Reserve Bank Committee, which was recently held in London, that the agreement between the Reserve Bank and the Imperial Bank should contain a statement that its continuance is to be dependent on the maintenance of a sound financial position by the Imperial Bank.

3. The Imperial Bank of India Bill of 1927 was referred to a Joint Committee identical with that which examined the Reserve Bank Bill in that year, and that committee recommended certain amendments, mostly of a minor character, designed to remove defects in the administrative machinery of the Bank. These have been incorporated in the present Bill. When the Amendment Bill was reintroduced in January, 1928, notice of one or two further amendments of minor importance and of a technical character was given by Government at the instance of the Central Board of the Bank. These have also been incorporated.

4. The period which has elapsed since the Bill was originally introduced has enabled the legal advisers of the Imperial Bank to give it fuller consideration and there are certain clauses which they consider should be amended to remove ambiguities and to assist in the smooth working of the Bank after the institution of a Reserve Bank. These matters still remain for discussion with the Central Board of the Imperial Bank and in order to deal with them Government may at a later stage propose such amendments within the scope of the present Bill as they consider desirable. In the meanwhile it is considered expedient that the Legislature should have the opportunity of considering an Imperial Bank Act Amendment Bill together with the Reserve Bank Bill. Accordingly the present Bill is being introduced without further delay in its original form, subject only to the amendments referred to in paragraph 3 above.

SIMLA; .....

The 6th September, 1933.

GEORGE SCHUSTER.

REPORT OF THE LONDON COMMITTEE ON INDIAN RESERVE BANK LEGISLATION

1. It was recommended by the Federal Structure Sub-Committee of the First Round Table Conference that, "with a view to ensuring confidence in the management of Indian credit and currency, ...efforts should be made to establish on sure foundations and free from any political influence, as early as may be found possible, a Reserve Bank, which will be entrusted with the management of the currency and exchange."* The Financial Safeguards Committee of the Third Round Table Conference recommended "that steps should be taken to introduce into the Indian Legislature a Reserve Bank Bill conceived on the above lines as soon as possible."† In the Report of that Committee it was also placed on record that "The Secretary of State undertook that representative Indian opinion would be consulted in the preparation of proposals for the establishment of the Reserve Bank including those relating to the reserves." The present Committee has been set up in pursuance of that undertaking.

2. We understand that the Bill, when drafted, is to be placed before the present Indian Legislature with a view to its being brought into force before the expiry of the existing Constitution. The provisions of the Bill, therefore, will have to be designed to fit in with the existing Constitution, but in discussing them we have kept in view the conditions contemplated under the new Federal Constitution and endeavoured to frame proposals on lines which will require the minimum of adaptation to those conditions. A complication arises from the uncertain future of Burma. We have, however, assumed that Burma, if separated, will continue to utilise the Indian currency system, and that no material changes in the Reserve Bank Act will be required.

3. We fully accept the principle that the Reserve Bank should be free from any political influence. The best device which the practical experience of other countries has evolved for achieving this object is that the capital of the Bank should be held by private shareholders,‡ and we recommend that this plan should be adopted in the case of India.

4. In formulating a scheme for the constitution of the Board of Directors, we have borne in mind the importance of securing the representation of the economic life of India as a whole, while at the same time guarding against undue influence in the affairs of the Bank by sectional interests, acquired through the control of voting power. The proposals below are designed to fulfil these aims, but their efficacy will depend in the first place upon proper restriction of voting power. We propose that the denomination of the share should be Rs. 500. On this basis we recommend that the minimum voting qualification should be two shares, which must have been held for at least six months, and that the maximum number of votes that may be exercised by any one shareholder should be ten. If such a limitation is imposed on voting power we do not think it necessary to place any restriction on the amount of capital to be held by any one shareholder. Such a restriction would place undesirable obstacles in the way of free marketing of the shares.

The Board of the Bank.

5. We consider that the Board should be as small as practicable. The majority of the Board of Directors should in our opinion derive their mandate from the shareholders. We do not recommend that any special provision should be made for the representation on the Board of commercial bodies as such. In view, however, of the fact that in the particular circumstances of India election may fail to secure the representation of some important elements in the economic life of the country, such as agricultural interests, we recommend that a minority of the Board should be nominated by the Governor-General in Council under the present Constitution and by the Governor-General at his discretion under the new Constitution, it being understood that this power would be exercised to redress any such deficiencies. We agree generally that the Board should be constituted as follows:—

8 Directors representing the shareholders;
4 Directors nominated by the Governor-General in Council;
1 Governor;
1 Deputy-Governor (or two, if two are appointed), with no voting power;*
1 officer of Government with no voting power.

We contemplate that the Governor would ordinarily attend all meetings of the Board, but if he is unable to do so on any particular occasion we consider that his vote should be exercised by a Deputy-Governor authorised by him to act as his substitute.

6. The plan which we recommend for the appointment of Directors to represent the shareholders is set forth in the next paragraph. It involves the division of India (including for this purpose Burma) into five "areas"; the election, by the shareholders resident in each area, of members of a Local Board; and the selection by the latter, from among themselves, of Directors to represent the respective areas on the Central Board.

7. In Appendix II will be found, in tabular form, our proposals for the geographical division into areas, and for the allocation among them of seats on the Central Board, and the initial allocation of share capital. It is suggested that Bombay should be the headquarters for the Western area (two seats on the Central Board), Calcutta for the Eastern area (two seats), Delhi for the Northern area (two seats), Madras for the Southern area (one seat), and Rangoon for the Burma area (one seat). (The number of Local Boards for this purpose should not be capable of increase.) The electoral scheme in the 1928 Bill provided for the inclusion of all the Indian States in the "Delhi Area." We consider, however, that the States should for this purpose fall into their natural geographical divisions, and our proposals, shown in detail in Appendix II, have been made on this basis. We propose that five members should be elected to each Local Board by the shareholders "resident" in the area according to the definition given in cause 4 (4) of the 1928 Bill. The members so elected should appoint, from among themselves, the Director or Directors to represent the area on the Central Board. Provision should be made to enable a substitute Director to be appointed from and by a Local Board in case a Director representing it is unable to attend a particular meeting.

8. Clause 6 of the 1928 Bill provides for the opening of offices at the headquarters of the five areas which we propose. We observe that this clause as it stands would oblige the Bank to establish a branch in London. We understand that it is the recognised

*Second Report of the Federal Structure Sub-Committee, paragraph 18.

†Report of the Committee on Financial Safeguards, paragraph 4.

‡Rai Bahadur Ram Saran Das records his view that the Bank should be State-owned.

*Some members of the Committee think that the Deputy Governors should have full voting power.

practice of Central Banks to conduct their operations in another country through the agency of the Central Bank of that country. We do not consider that the Board should be precluded by statute from following this practice. We therefore recommend that the words "and London" should be omitted from clause 6, the effect of which will be to make the establishment of a London branch optional. Should the Bank arrange to employ the Bank of England as its agent in London, we contemplate that the arrangement would be reciprocal and that the Bank of England would employ the Reserve Bank as its agent in India.

9. Apart from their functions in the machinery by which Directors are appointed, the Local Boards would have no executive duties, except as may be delegated to them by the Central Board. Otherwise they would be purely advisory bodies. In particular, they might play a valuable part in the security of commercial paper, analogous to the functions of the discount committees established in Belgium, Bulgaria, Japan and Lithuania. With a view to ensuring that all appropriate interests, agriculture and the Indian States in particular, are adequately represented, the Central Board should be empowered to nominate to each Local Board not more than three additional members who should be full members of the Local Board, except that they should not be eligible to be returned as representatives of the area on the Central Board, nor to take part in the selection of such representatives.

10. As regards the qualification of elected Directors, we consider a provision on the lines of subclause 2 of clause 11 of the Bill of 1928 to be desirable. We would also provide that within six months of their appointment to the Central Board the four nominated Directors must become possessed of the same share qualification as is prescribed for Directors elected by the shareholders. We do not, of course, suggest that a share qualification must be acquired by the Governor, the Deputy-Governor or Governors, or the Government officer. We accept the disqualifications set out in clause 8 of the 1928 Bill, to which, however, we could add "Insolvency." We have considered whether the disqualification of Government officials should apply also to officials of Indian States. We are all agreed that, so far as elected members of Central or Local Boards are concerned, this disqualification should apply, but as regards nominated directors, either on the Central or Local Boards, the Indian States representatives have pressed that an exception should be made. Recognising that there might on occasions be practical difficulties in finding suitable non-official representatives of the Indian States, a majority of the Committee are prepared to recommend an exception in this case, provided that it shall not apply to officials of the Government of India lent to an Indian State.

11. The qualifications and disqualifications applicable to members of a Local Board, whether elected or nominated, should, subject to what is said in paragraph 10 above, be the same as those applicable to the elected members of the Central Board.

12. We recommend, in order that the Reserve Bank may be able to commence operations, that the first appointment of Directors should be made by the Governor-General in Council, suitable arrangements being made for retirement in rotation.

13. The method of appointing the Governor is a matter of the highest importance. It is essential that this officer should command general confidence, both in India and abroad. As regards the appointment of the Governor and Deputy Governor (or Deputy Governors), the majority of the Committee hold that the Governor-General in his discretion should be the appointing authority when the new Constitution comes into force. Those who were of this opinion felt no doubt that before making these appointments the Governor-General would ascertain the views of the Board of the Bank. A minority of the Committee, however, hold that these appointments should be made by the Board of Directors, subject to the approval of the Governor-General. An attempt to harmonise views was made by proposing that the existing provision of the Imperial Bank constitution should be followed in drafting the Bill, and that the Governor and Deputy Governors should be appointed by the Governor-General after consideration of the recommendations of the Board of the Bank. This solution, as a compromise, was acceptable to all members of the Committee except four.

Share Capital and Share Registers.

14. We recommend that the original share capital of the Bank should be Rs. 5 crores, divided into shares of Rs. 500 each, which should be fully paid; that the initial allocation as between the five areas should be on the lines indicated in Appendix II; that a separate share register should be maintained in each of the five areas; and that shares should be transferable from one register to another, so that there would be a free market in them, but shareholders should only be entitled to vote in respect of the areas in which they are resident.

Structure of the Bank.

15. The two previous Bills provided for separate Issue and Banking Departments as in the case of the Bank of England, and we understand that this provision has met with general approval in India. We recommend that the new Bill should be drafted on this basis.

Business of the Bank.

16. We approve generally of the provisions of clauses 17 and 18 of the Bill of 1928, but we consider that some extension may be required to enable the Indian States to participate in the Reserve Bank Scheme, and detailed suggestions of this nature are included in Appendix I.

17. The Banking Enquiry Committee recommended* that additional provision should be made enabling the Bank to make loans and advances on the security of moveable goods, wares and merchandise, as well as against the warehouse warrants and warehouse receipts representing such goods. We do not feel able to recommend any such provision, since it would tend to render the Bank's resources less liquid, and might involve it in undesirable competition with commercial banks.

18. An important question arises in regard to clause 18. Since the Hilton Young Commission reported and the previous Bills were drafted, Central Banking practice in other countries has developed in the direction of utilising open market operations to an increasing extent for the purpose of regulating credit. Clause 18 as it stands might be read as necessitating a meeting of the Board on each occasion on which such operations are required. Since action may be necessitated, for the purpose of regulating credit, with a degree of urgency which does not permit prior consultation with the Board, it should be made clear that the Board is not precluded from delegating to the Governor powers in this behalf for the above-mentioned purpose.

Exchange obligations of the Bank.

19. The questions which arise in connection with the exchange obligations to be imposed on the Bank present special difficulty in existing circumstances. In the prevalent state of monetary disorganisation throughout the world, it is impossible to incorporate in the Bill provisions which would necessarily be suitable when monetary systems generally have been re-cast and stabilised. In these circumstances we consider that the only sound course for India is to remain on the sterling standard. On this basis the

*Report of the Indian Central Bank Enquiry Committee of 1931, paragraph 607.

exchange obligations incorporated in the Bill must necessarily be in accord with the rupee-sterling ratio existing at the time when the Bill is introduced. This statement does not, however, imply any expression of opinion on the part of the Committee on the merits or demerits of the present ratio. The ratio provisions in the Bill are designed to make it clear that there will not be any change in the *de facto* situation by the mere coming into operation of the Reserve Bank Act.

A considerable majority of the Indian Delegates feel it their duty to record their view that a suitable exchange ratio is one of the essential factors for the successful working of the Reserve Bank. They point out that considerable changes have occurred in the currency bases and policies of almost all the countries of the world in the last few years. In their view it is for the Government of India and the Legislature to examine these and all other relevant considerations with a view to ensuring that the minimum possible strain is placed on the currency system of India.

We are all agreed that it should, in any case, be made clear in the Preamble that the whole question of the monetary standard best suited to India will have to be reviewed when the international monetary position has clarified itself and become sufficiently stable to make it possible to frame more permanent provisions.

20. It will be necessary in the Bill to provide limits to the range of exchange fluctuations by prescribing upper and lower points at which the Bank will be required to buy and sell on demand sterling for immediate delivery. According to the practice now prevailing upper and lower points have in fact been retained as though the rupee was still on a gold basis. As the fixing of new points would in any case have to be on an arbitrary basis we recommend that this practice, to which the public have become accustomed, should be continued.

Assets and Liabilities of the Issue Department.

21. The addition of 40 crores to the liabilities of the Issue Department for the purpose of providing for rupee redemption requires reconsideration in view of the large return of rupees from circulation since the Hilton Young Commission reported and the indications as to the probable trend of the movement of rupees in and out of circulation in the future. We recommend that, as the future return of rupees over a series of years is likely to be considerably less than in the past few years, the rupee redemption fund should be dispensed with and in its place the following scheme should be adopted:—

(1) The amount of rupees transferred at the outset to the Bank should not exceed Rs. 50 crores.

(2) Any surplus of rupees which this arrangement would enable Government to remove from the reserve should be held by Government in a separate account, the silver being held as bullion, not as coin. Subject to further consideration,* such rupees should not be used, except for the purpose specified in (3) below.

(3) In any year in which the minimum holding of silver rupees by the Bank exceeded 50 crores of rupees or one-tenth of the total amount of the reserve, the Bank would have the right to make over the surplus to Government to an amount not exceeding 5 crores of rupees in any year, and Government would be required to pay full value for these (to the extent of 40 per cent. in sterling or other external assets acceptable to the Bank if the Bank so required, and if the Bank's external assets at the time did not exceed 50 per cent. of its total reserve).

(4) If in any year the Bank's maximum holding fell below the amounts indicated above, Government would similarly have the right to sell rupees to the Bank up to a maximum of 5 crores in any one year.

We observe in this connection that the omission of any provision for a specific rupee redemption fund makes it all the more necessary that the reserves of the Bank should at the outset provide an ample margin over the statutory amount. Under the proviso to clause 33 of 1928 Bill, the initial proportion of gold and sterling assets must be not less than one-half of the liabilities of the Issue Department. We do not propose any alteration in this figure in the new Bill, but we think that this proportion may not necessarily be adequate, and we recommend that the question whether a higher proportion is required at the outset should, before the Bank is set up, be carefully considered by Government in the light of all the prevailing circumstances.

22. As regards the holding of Government of India rupee securities, the question was raised whether the limits proposed in the second proviso of clause 31 (3) might not prove unduly restrictive of the Bank's open market operations; and we recommend that this point should be further considered in India.

23. With regard to the remainder of the reserve, we recommend that "Gold Securities" should be replaced by "Sterling Securities." The holding of gold securities would be not merely inappropriate to a sterling standard, but, in the present state of uncertainty, a possible source of weakness. As regards the aggregate proportion of gold coin or bullion and sterling securities to be held, we recommend that the minimum figure of 40 per cent. proposed by the Hilton Young Commission and adopted in the previous Bills should be retained.

24. As regards the distribution of this minimum between sterling and gold various considerations have to be taken into account. On the one hand it must be recognised that the Bank will always require to hold a substantial amount of sterling in order to enable it to fulfil its sterling obligations. Indeed it might be argued that so long as the rupee is not based on a gold standard there is no logical necessity to prescribe a minimum holding of gold and that any such limitation would restrict the freedom of the Bank's operations and would, to that extent, be a source of weakness in relation to its obligations to maintain the currency standard. There is, moreover, a further argument that as gold carries no interest any undue proportion of gold holdings would unjustifiably reduce the Bank's profits and so impose, indirectly, an unnecessary burden on the Indian taxpayer. As against these considerations, must be weighed the deep and widespread feeling in India in favour of holding gold as affording ultimately the most reliable form of reserve, a feeling which may necessitate some provision for a minimum gold holding in order to secure the confidence of the Indian public in the stability of the Bank. While individual members of our Committee have been inclined to attach varying degrees of importance to these different considerations we have been able to reach agreement on a recommendation that the Bill should prescribe a minimum gold holding of Rs. 35 crores.*

The minimum of Rs. 35 crores represents actually about 20 per cent. of the present note liability. Should, however, through any considerable expansion of the note issue, this percentage fall below 15 per cent., some members of the Committee are of opinion that the position should be immediately reviewed.

25. The question of valuation of the gold assets presents some difficulty. At a time when monetary standards are completely disorganised, there is, in fact, no logical figure applicable to the valuation of

*Some of us wish to make it clear that in accepting this scheme we do not wish to be regarded as endorsing any policy of selling silver.

*Sir Purshotamdas Thakurdas and Rai Bahadur Ram Saran Das dissent from the proposal to omit any provision for a minimum percentage of gold to the note issue.

Sir Campbell Rhodes would prescribe no minimum but leave the Board complete freedom in the matter of gold reserves.

gold reserves. We consider that the best course would be to retain the valuation laid down in sub-clause (4) of clause 31. This would be in accordance with the practice at present followed by the Bank of England and in India, where gold continues to be valued at the old parity. Under this arrangement the existing holdings would be covered against loss by a wide margin. The possibility would obviously be present that the Bank might gain a large premium on the gold handed over to it by Government. The question as to how such premium should be dealt with, especially in the event of sales being made in the intermediate period pending revaluation of the gold, raises, complex practical issues which we have not fully discussed. In principle such profits should belong rather to the Government than to the Bank, but our view is that this unrealised margin should in some way or other be kept available for strengthening the position of the currency reserves. We recommend that detailed proposals should be worked out by the Government of India for consideration during the passage of legislation on this subject.

26. We approve generally of the provisions of clause 41 of the 1928 Bill, relating to the suspension of reserve requirements and the connected tax provision. We† think it would be well to bring clause 41 into a closer connection with clause 31 in order to make it clear that the "minimum" reserve can, and should be utilised whenever this is called for by the circumstances.

Reserve Fund and Allocation of Surplus.

27. We approve, generally, the provisions for "Reserve Fund and Allocation of Surplus" in clause 46 of the 1928 Bill, subject to the following modifications in regard to the distribution of dividends. The appropriate rate for the fixed dividend must depend to some extent on the return on comparable securities at the time of issue of the shares. We recommend that the Bill should empower the Governor-General in Council to fix this rate, subject to a maximum of 5 per cent. Provision should also be made, on the lines of the Third Schedule to the 1928 Bill, for a gradually increasing dividend up to a maximum of 6 per cent. In determining the fixed rate of dividend the Governor-General in Council should take into account, not only the yield on Government long-term securities, but also the desirability of attracting the small investor in the mofussil and thereby securing a wide distribution of the shares.

Scheduled Banks.

28. We approve the principle of clause 44 of the 1928 Bill, under which Scheduled Banks are required to maintain minimum balances with the Reserve Bank. Some doubts have been expressed as to the appropriateness of (a) the criterion for inclusion in the schedule, **viz.**, Rs. 3 lakhs paid-up capital and reserves; and (b) the percentages prescribed in sub-clause (1) of that clause. We recommend that these two questions should be reconsidered in India together with the question whether the criterion should be based on the amount of deposits rather than on the paid-up capital and reserves.

Relations of the Reserve Bank with the Imperial Bank of India.*

29. We recommend that the Reserve Bank should be required to enter into an agreement with the Imperial Bank on the general lines of clause 45 of the 1928 Bill, but we consider that the period of 25 years prescribed in that clause is too long, and we suggest that this point should be further considered by the Government of India. The initial period, however, should be of substantial duration, with provision thereafter for termination on several years' notice given by either side. The agreement should further contain a stipulation that its continuance is dependent on the maintenance of a sound financial position by the Imperial Bank.

30. With regard to the Second Schedule to the 1928 Bill, we approve of the provision that the Imperial Bank should be the sole agent of the Reserve Bank at all places in British India where there is a branch of the Imperial Bank of India and no branch of the Banking Department of the Reserve Bank. It should be understood that this only applies to branches that are in existence at the time when the Act comes into force. We also agree that the Imperial Bank shall not, without the approval of the Reserve Bank, open any branch in substitution for a branch existing at the time when the agreement comes into force. As regards other branches that may be opened in the future, the Reserve Bank should be under no obligation to employ the Imperial Bank and should be free to make its own arrangements. The agency terms provided for in paragraphs 2 and 3 of Schedule II will require reconsideration in the light of present circumstances, and we recommend that the Government of India should frame revised terms in consultation with the Imperial Bank.

31. It was submitted to us that, apart from the question of remuneration for services to be rendered, the Imperial Bank of India has a moral claim for compensation in respect of its disappointed expectations and of commitments which it undertook, by arrangement with Government, before the institution of the Reserve Bank was contemplated. It was suggested to us that such compensation should be given in the form of an allotment of a part of the share capital of the Reserve Bank to shareholders of the Imperial Bank. We do not consider that the question whether the Imperial Bank is entitled to compensation is within the purview of this Committee, but, in any case, we cannot recommend any special allocation of Reserve Bank shares to the shareholders of the Imperial Bank, as this would be inconsistent with our scheme for the distribution of shares on the broadest possible basis throughout India. We have no doubt, however, that any claim for compensation which may be put forward by the Imperial Bank will receive due consideration by the authorities in India. If the claim is conceded we consider that the compensation should be given in some other form.

General.

32. The Committee considered whether the powers to be given to the Governor-General in Council in various clauses of the Bill should, under the new Federal Constitution, be exercised by the Governor-General at his discretion or by the Governor-General on the advice of his Ministers. In agreeing to the recommendations recorded below, some of the members took into account the powers which they assume the Governor-General will possess under the new Constitution Act to intervene if on any occasion his special responsibilities are involved.

In clause 41 of the 1928 Bill (Suspension of Reserves) no agreement was reached between the three alternatives of the exercise of these powers—

(*a*) by the Governor-General at his discretion;
(*b*) by the Federal Government; or
(*c*) by the Federal Government with the approval of the Governor-General at his discretion.

In clause 43 and 52 of the 1928 Bill (Forfeiture of Right of Note Issue and Liquidation) it was agreed that the powers should be exercised by the Federal

†Except Sir Purshotamdas Thakurdas and Rai Bahadur Ram Saran Das.

*Owing to their connection with the Imperial Bank, Sir Edward Benthall and Sir Purshotamdas Thakurdas took no part in the discussion of this question.

Sir Akbar Hydari also desired to have his view recorded that the objects for which the early establishment of the Reserve Bank had been found necessary would be much more speedily attained, at the outset at least, if the Imperial Bank of India was, with suitable modifications, made the instrument for attaining these objects, rather than by the creation forthwith of an entirely new institution.

Government with the approval of the Governor-at his discretion.

In clause 53 (Regulations) it was agreed that the power should be exercised by the Federal Government.

33. In the preceding paragraphs we have dealt with all the major questions in respect of which we recommend any departure from the provisions of the 1928 Bill. In other respects we recommend that the principles of that Bill should be followed in drafting the new Reserve Bank Bill. There are, however, a number of minor points on which we recommend modification of the provisions of the 1928 Bill, either as being consequential on our major recommendations or desirable on other grounds. These suggestions are set forth in Appendix I, and for convenience of reference we annex to our Report a copy of the 1928 Bill.

34. In conclusion we desire to express our obligation to our Secretaries, Mr. G. H. Baxter and Mr. A. T. Williams and other members of the staff concerned for the invaluable assistance which they have rendered both in our proceedings and in the drafting of our Report.

1st August, 1933.

*Mr. Ramaswami Mudaliar has signed on behalf of Mr. Iyengar in regard to all matters on which agreement was reached before Mr. Iyengar left for India. In regard to other matters, Mr. Iyengar has reserved the right to record a supplementary note if he finds this necessary.

APPENDIX I

(See paragraph 33 of Report.)

Title and Preamble.—The reference to "Gold Standard Currency" will require amendment.

Clause 1 (1).—This clause will need to be similarly amended.

Clause 1 (2).—We have asumed that Burma, if separated, will continue to utilise the Indian currency system. If the decision ultimately reached is otherwise, an amendment of this sub-clause will be necessary.

Clause 1 (3).—A modification of dates will be necessary.

Clause 1 (4).—We recommend that this sub-clause should provide that Chapter III shall be in force for a period of 25 years, and shall continue in force thereafter until revoked or modified by further legislation.

Clause 2 (*g*).—The definition of a "gold standard country" will have to be replaced by that of a "sterling standard country."

Clause 4 (8).—The scheme of allotment should be modified so as to provide for preferential allotment to the extent of two shares (the suggested minimum qualification for a vote) being given to applicants for two shares and over. A specific provision should also be made excluding Government from voting power in respect of any capital left in its hand.

Clause 8 (1) (*a*) (i).—We would amend this to read :—

> "engaged in the direction of agricultural, commercial, financial or industrial activities, or"

Clause 11 (1).—Elected Directors should be removable by the Governor-General in Council on a resolution passed by the Board by a majority consisting of not less than nine Directors. Other members of the Board be removable by the authority which nominated or appointed them.

Clause 13.—Election rules should be drawn up by the Bank in the manner provided for in clause 53.

Clause 15 (1).—Provision will be necessary for calling local meetings to elect the Local Boards.

Clause 15 (2).—Bearing in mind the widespread practice of blank transfers in India we consider that members of Local Boards might be empowered to call upon any registered and resident shareholder to make a statutory declaration to the effect that he is actual owner of the shares registered in his name.

Clause 17 (1).—Provision should be made to enable the Bank to act as Bankers for Indian States.

Clause 17 (2) (*c*).—We would add after the words "Local Government" the words "or such securities of an Indian State as may be specified in that behalf by the Governor-General in Council on the recommendation of the Central Board of the Reserve Bank."

Clause 17 (3).—The reference to "Gold standard countries' shall be changed to "Sterling standard countries."

Clause 17 (7) *and* (8).—It has been suggested that in present conditions these sub-sections are unduly restrictive as regards the maturities of Government securities in which the Bank is permitted to deal. We recommend that this point should be further examined by the Government of India. An amendment similar to that already suggested above to sub-clause 17 (2) (c) might also be made to sub-clause 8.

Clause 17 (11).—The words "or Indian State" might be added after the words "Local Government" to admit of the Bank acting as agent for the Indian States.

Clause 17 (14).—We consider that external borrowing should be expressly confined to other Central Banks, and that in that event no limitation need be placed on the amount which it is permissible to borrow externally.

Clause 17 (16).—We would redraft this sub-clause as follows :—

> "Generally, the doing of all such matters and things as may be incidental to, or consequential upon, the provisions of this Act and not prohibited by this Act."

Clause 18.—We would substitute for the words "in the interests of Indian trade or commerce, or for the purpose of enabling the Bank to perform any of its functions under this Act," the words "for the purpose or regulating credit in the interests of Indian trade, commerce, industry and agriculture."

A further amendment of this clause has been recommended in paragraphs 18 of our Report.

Clause 31.—Here, and in other clauses where it is referred to, the provision for "gold securities" should be replaced by "sterling securities."

Clause 31 (3).—It is for consideration whether it should not be made clear that the "Government of India rupee securities" must be marketable securities.

Clause 31 (6).—This sub-clause will require amendment in view of the adoption of a sterling standard.

Clauses 32—37 will require modification in the light of our proposal for the omission of provision for a specific rupee redemption fund.

Clauses 38—40.—These clauses will require to be replaced by povisions on the lines indicated in paragraphs 19 and 20 of our Report.

Clause 53.—Amendments and additions will be required in consequence of certain of our recommendations.

APPENDIX II

(*See paragraph 7 of Report.*)

Suggestions for Distribution of Local Areas and Allocation of Shares.

Area (1)	Headquarters (2)	Extent (3)	Number of Directors (4)	Allocation of share Capital Rs. lakhs (5)

SUMMARY OF THE PROCEEDINGS

OF THE JOINT COMMITTEE ON THE RESERVE BANK OF INDIA BILL WHICH SAT AT BOMBAY FROM THE 30th MAY TO THE 4tn JUNE, 1927

Sir Phiroze Sethna was unanimously elected to the Chair. The Committee considered the proposal to take outside evidence and decided that if at a later stage they thought that evidence was necessary, they might send for witness.

The first point taken up for consideration was what sort of institution the Reserve Bank should be, that is whether the institution should be—

(1) a Bank without share capital,
(2) the Imperial Bank in some form, or
(3) a new Bank as proposed in the Bill.

The suggestion to have a Bank without share capital was supported by the following arguments:—

(1) A banking institution controlling the credit and finances of the country and directed by a body which is only responsible to a number of private shareholders and not responsible to the Legislature is not acceptable in India. Vested interests might try to get control over the organisation not to speak of the danger that the conflict between foreign and Indian capital might be reproduced in the management of the Bank.

On this view it was considered that the Directors must be responsible to the Legislature and be elected from a panel of Legislators.

(2) The first Directors of the Bank would be nominated by the Viceroy and thereafter the tendency would be to re-elect them.

(3) The Chief desideratum in India is that the new currency and banking system should create confidence in the minds of the people so that they may abandon the habit of hoarding. To create this confidence it is necessary to have a bank controlled by the Government and the Legislature the confidence of the vast majority of the illiterate masses.

(4) The Reserve Bank is not an institution for profit and has to be run in the public interest. Instances are not wanting of successful State Banks which have undertaken the duties of a Reserve Bank, for example the Bank of Australia. The Commission has not stated anywhere that the experience of the Australian Commonwealth Bank is unsatisfactory and that India should not follow that example. A Bank of that kind should be set up in India.

(5) Even if it is decided to raised capital, it is necessary not to allow the profits of the Bank to be reaped by foreign capitalists and the capital should, therefore, be raised in Indian and on such basis that the profits are distributed among the largest number of people living in the country.

(6) The minimum reserves that the Reserve Bank will receive as deposits from the Government and the Commercial Bank should place sufficient resources at the hands of the Central Bank to handle and if more capital is required, it can be raised by debentures.

The proposals in the Bill were justified on the following grounds:—

(1) The object of the Royal Commission was to remove from the hands of the Executive Government functions which should be conducted solely from the point of view of commercial advantage and of what was best in the economic interests of the country. The proposal to have a State Bank without capital did not achieve this object.

(2) As regards the suggestion that the Bank as proposed in the Bill might not command confidence, it was pointed out that in Section 23 of the Bill, it was provided that the notes should be guaranteed by Government.

(3) A Bank to control the currency and credit of the country must possess substantial credit any enjoy the confidence of the public and a body of Directors elected by persons who had subscribed some share capital would have greater interest in the institution and command more confidence than Directors selected by other means.

In particular the Bank should be free from Government control and political influence.

(4) The object of share capital is to create a democratic constituency to which the controlling body would be responsible. If the directorate of the Bank were to be made responsible to the Legislature, considerations other than purely business and commercial considerations might arise in guiding the policy of the Directorate. The Commonwealth Bank of Australia had suffered from its constitution and had been trying hard to become a purely Central Bank, but the problem has not yet been solved. It is not therefore an example to other countries. Most of the State Banks created after the War have tried to exclude Government control to very much greater extent than was proposed in the present Bill.

(5) As regards the apprehension that the first Directors of the Bank would automatically be re-elected, the Committee was assured on behalf of Government that before making the original nomination under the proposals of the Bill, the Government would be prepared informally or by any other method to consult the Chambers of Commerce and other people as regards the names that are suitable and satisfactory to the people of India.

The proposal to have a Reserve Bank without share capital was declared carried by 14 votes against 10.

The Finance Member then explained the general position of Government in regard to the Bill in view of the voting on the proposition to have a Bank without share capital. He said that the Government in framing the Bill felt themselves justified in departing in small matters of detail from the recommendations, but the Government were not justified in departing from the general framework recommended by the Commission. The vote on the share capital altered the whole framework and ran counter to the fundamental recommendation of the Commission that the Reserve Bank must be entirely independent of Government control and entirely independent of political influence. There was no constructive suggestion made as to how to create a controlling body which is to be responsible for the management of Government balances and in the absence of a body of shareholders there is no other constituency to fall back upon but the Government. During the subsequent discussions that followed one member said that the vote on share capital meant that whoever controls the credit and currency of the country must be responsible to the Legislature but the other members pointed out that the question whether the entire management of the Bank should be with the Government or otherwise was still open for consideration. It was suggested that it was still possible to set up a proper directorate which would be on the one hand independent of the Government and at the same time free from the narrow capitalism which would result if the proposals in the Bill were accepted, and that

it would also be quite possible to find safeguards to prevent any political influence operating in the management of the Bank. The Finance Member expressed his satisfaction that the vote only meant that the Bank should be a Bank without shareholders, but that it was still possible in the opinion of several members to have a body created by statute legally should be the Imperial Bank in some form was taken, lature and protected legally against interference by the Government or Legislature, though he thought it would be an extraordinarily difficult, if not impossible, thing to create that kind of statutory body.

The second question whether the new Bank should be the Imperial Bank in some form was taken. It was decided to have a Reserve Bank separate from the Imperial Bank. The following constructive suggestion for the constitution of the Directorate of the Bank in a way that would not make it subject to the control of the Government or of the Legislature was made by Pandit Madan Mohan Malaviya after consultation with some other members in the Committee:—

(*a*) A Governor and a Deputy Governor who shall be appointed by the Governor-General in Council for a period of 5 years and shall devote their whole time to the affairs of the Bank and shall receive such salaries and allowances respectively as may be determined by the Board.

(*b*) Two Directors nominated by the Governor-General in Council to represent such interests as, having regard to the composition of the rest of the Board, he may think desirable.

(*c*) Two Directors elected by an electoral board of Provincial Legislatures to represent the interests of Agriculture.

(*d*) Two Directors, one of whom shall be elected by the European Associated Chambers of Commerce and the other by the Indian Chambers of Commerce. (One of the two directors will be European and one Indian).

(*e*) Two Directors to represent interests of Industries to be elected by electorates to be determined later on.

(*f*) One Director to represent interests of Banks to be elected by banks with which are registered under the Indian Companies' Act.

(*g*) One Director to be elected by the Provincial Co-operative Banks.

(*h*) Three Directors to be elected by a combined electorate of the Council of State and the Legislative Assembly.

(*i*) An officer of Government to be nominated by the Governor-General in Council.

It was also proposed to add a proviso to clause 7 of the Bill giving the Governor-General in Council the right of veto in certain matters to be specified. It was pointed out that this question of suspensory veto had been carefully considered by the Royal Commission and rejected. The matters in which this right would be exercised were then stated to be open to discussion and that if there was no need for this right of veto, it would not be pressed.

The Finance Member desired to know whether it was contemplated that bankers could be elected as Directors, and he added that if they were to consider the question of election of the Directors by local and Central Legislatures, the case for excluding members of the Legislatures from the Directorate was even stronger than before. Both these points were said to be open for discussion aned the members of the Committee did not wish to comit themselves to a decision on the points just then.

The Finance Member suggested postponement of further discussion of the question of the Directorate to the Calcutta meeting in order to give time to the promoters of the scheme to suggest improvement to consider possible amendments and adaptations.

Sir Umar Hayat Khan with the permission of the Chairman handed in another scheme in the form of an amendment which ran as follows:—

Agriculturists should have due representation on the Board of Directors in accordance with their numerical strength. At any rate their number should be in proportion to the amount of money they have paid into the Government coffers. The number of Muhammadans on the Board should not be less than the proportion of their numbers to the total population in the country.

The Committee considered the various clauses of the Bill and the decisions arrieved at and the amendments suggested are briefly summareised below:—

Section 3.—This was approved without any change.

Section 6.—It was decided to add Rangoon to the list of places where the Bank should have branches from the beginning. This was supported on the ground that Rangoon was a more important place commercially than Madras, and that it was necessary to dissipate the feeling that existed in Burma that the authorities in British India were not sufficiently considerate to Burma. It was also proposed and accepted that for the words "whether in India or elsewhere" should be substituted the following:—

"in India or with the previous sanction of the Governor-General in Council outside India."

Section 14.—The Finance Member agreed at the outset in response to various suggestions made for linking the Co-operative Banks with th Reserve Bank to consider that question separately and to place a full memorandum before the Committee at Calcutta. He suggested that it might be necessary to either exempt these Co-operative Banks from the provisions of Section 41 or to allow them some kind of concession in the form of reduced percentages, etc.

Section 14, Clause (*1*).—The Finance Member stated that it was the intention to include everybody in this clause and as a purely drafting amendment it was decided to substitute the words "corporations, companies, firms and private persons" for "banks and other persons" at the end of this clause.

Clause (*2*)—In sub-clause (*a*), (*b*) and (*c*) of this clause and in Section 15 it was decided to define bills of exchange and promissory notes as drawn and payable in India and to provide specifically that the maturities mentioned therein were exclusive of the days of grace.

It was agreed that the word "bank" in this section should cover only those banks required to make deposits under Section 41 and therefore it was resolved that it should be made clear that the word "bank" in subclause (*a*), (*b*) and (*c*) meant "depositing bank."

It was also agreed that it was necessary to widen the scope of the term either by definition of "bank" or by expansion of the Schedule of Banks in the Bill possibly with limit of capital.

A suggestion was made and accepted to increase the limit of one-fifth in sub-clause (*b*) to one-fourth.

In sub-clause (*c*) it was decided to alter the words "Government securities" into "securities of the Government of India or of a Local Government." A suggestion was made, to include corporation bonds, Municipal bonds and Port Trust debentures but this was not pressed as it was pointed out that the case of trustee securities was dealt with in clause 4 sub-clause (*a*).

Clause (*3*).—The first suggestion that was made was to confine the purchase and sale of the currencies of Gold Standard countries to sterling only.

The second suggestion was to omit the words "and persons approved by the Board." The third suggestion was to restrict in some way the operations of the Reserve Bank contemplated in this clause. As regards the first suggestion it was pointed out that unless a provision of this sort existed there was no safeguard against the contingency of sterling departing from parity with gold.

It was admitted that every body wanted the rupee to be linked to sterling only as long as sterling was at gold parity and no longer. If owing to any unforeseen circumstances later sterling depreciated, the Committee did not wish to prohibit the reserves from being held in some other country than England. It was agreed that the holdings of foreign currencies should not be restricted to any one country, though it may be necessary to hold them to the minimum extent possible in various countries. It was also agreed that the Gold Standard countries in this clause should be notified by the Governor General in Council. As regards the second suggestion to delete the words "and persons approved by the Board," it was pointed out that there are a few firms of which Rallis is the most important which have always access to the Secretary of State and the Imperial Bank in addition to the exchange banks. It is largely a historical matter and there might be occasions on which the Government of India would get cheaper rates for their remittance by the inclusion of these persons instead of being entirely in the hands of a limted group of exchange banks. The proposal to delete the words was defeated by a large majority but it was agreed to define "banks" in this clause as deposting banks. As regards the third point, it was contended that this clause gave very wide powers to the Reserve Bank. It was first suggested that the Reserve Bank should not do any exchange business on its own account but only act as the agent of the Government. In reply it was pointed out that the Commission had fully dealt with this point in paras. 103 to 109 of their Report and that the Commission had recommended that the remittance business should be done by the Reserve Bank as principal and not as agents, choosing its own time and method for remittances.

The Finance Member explained that whenever the Government wanted to spend a large amount, say, 10 million sterling, on the capital expenditure programme or on stores or the purchase of a company managed railway by the State, they would go to the Reserve Bank and intimate that they required that amount. It would be open to the Reserve Bank to say that their duty of maintaining exchange could not be carried out if they fulfilled this requirement and it might advise the Government to borrow abroad. That would be the relation between the Government and the Reserve Bank. It was absolutely necessary that there should be some kind of working agreement between the Government and the Bank that in certain circumstances Government would come to the assistance of the Reserve Bank in the matter of maintaining exchange either by not entering into certain commitments at particular times or by borrowing for those commitments abroad. The Government would pay serious attention to the recommendations of the Reserve Bank on the question of borrowing abroad or on the question of its remittances abroad.

The next point that was raised was the placing of some limitation on the amount of foreign currencies that the Reserve Bank should keep. It was sueggested that the holding of feoreign currencies should be limited to the requireements of the Government of India aned nothing more. The Commission had suggested that such purchase and sale of foreign currencies might be necessary on account of operations for the currency reserves and for the purpose of co-operating with other countries. It was urged by certain members in regard to the two latter operations that the reserves of India had been used in the past to accommode other countries, and the grant of this power would encourage a certain amount of speculation. It was thereby meant that funds were lent out in London when they could more advantageously be used in India. So far as this question of the utilisation of India's funds abroad is concerned, it was explained that it made no difference to India whether the extra currency in India was issued against securities of gold standard countries or against gold in India except that if it were issued against gold India would not get any interest. Secondly, the London money market is a very big one and the advantage to that market of having this extra amount of money on short-term was not very very important, and in fact the Bank of England had not always found it a convenience. The Finance Member added that though India, England and the United States of America might be in competition in certain respects, yet so far as the regulation of the stability of the exchange and money rates, etc., and the peace and prosperity of the country were concerned, they were all more likely to be improved by harmonious working between the Governor and the Directors of the Reserve Bank in India and the Governors of the Reserve Bank of New York, Bank of England and other banks. This was going to be a very important matter to the world in the future in keeping the money market steady and avoiding sharp variations in prices. The example of Germany was quoted in this connection and it was explained how, though Germany had been drawing gold, it had power and had exercised that power of operating through sterling and other securities in the Reserve thereby moderating her demand for gold. Eventually the following Resolution embodying the conclusion of the Committee was arrived at:—

> "That the Joint Committee agrees that subclause (3) of Clause 14 do stand as it is with this proviso that the power under this clause shall be exercised by the Bank only for meeting the requirements of the Government of India and of the customers of the Bank and to operate on the Reserve to an extent, if any, to be specified later on."

Clause 4, sub-clause (a) to (d).—These were agreed to except that in sub-clause (*c*) the limit of one-fifth was altered to one-fourth.

As regards sub clause (*e*) the period of 5 years was discussed, some members being in favour of extension in order to allow time for the bill habit to develop and others for retaining it in order to accelerate the growth of the bill habit. The proposition to substitute 10 years was put to the vote and lost by a large majority.

The attention of the Committee was invited to the following statement of the exchange banks on page 128 of the printed opinions circulated: "We should, however, observe that this claus [referring to sub-clause 4(*e*)] as it now worded will in all probability be inoperative. Under existing banking custom in India, it is doubtful whether a legally effective title can be given as appears to be required by this clause."

The Finance Member stated that it was a legal point which would be further examined.

Clause 5.—This was agreed to.

Clause 6.—This was also agreed to.

In reply to a query what bank post bills meant, it was explained that these were a special form of remittance in Bengal.

Clause 7.—It was suggested that it was desirable to fix some limit within which alone the Bank may operate in foreign securities. It was pointed out that in South Africa there is a time restriction of two years and a limit of amount up to the paid up capital and Rpserve of the Bank. The Finance Member explained that limitations of this sort might be embarrassing, but he was prepared to consider the question before the Calcutta meeting as they might probably find reasons why it might be desirable to impose no limit. The question of imposing limits was therefore postponed to the Calcutta meeting. It was also agreed that Gold Standard countries be notified by the Governor General in Council.

Clause 8, 9 and 10.—The following redraft of these three clauses was agreed to:—

> "the purchase and sale of securities of the Government of India of any maturity, or of a

local Government or of local authorities in India maturing within ten years from date of purchase, provided that the amount of the securities held in the Banking Department shall be so regulated that—

(*a*) the total value shall not exceed the total of the capital of the bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits ;

(*b*) the value of such securities maturing after six months shall not exceed the total of the capital of the bank, the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits ;

(*c*) the value of such securities maturing after one year shall not exceed the total of the capital of the Bank, the Reserve Fund and one-tenth of the liabilities of the Banking Department in respect of deposits ; and

(*d*) the value of such securities maturing after ten years shall not exceed the total of the capital of the Bank and the Reserve Fund."

Clauses 11 to 14.—These were accepted.

Clause 15.—It was suggested that the transaction should be limited to other Central Banks and it was agreed to add at the end of this clause the following :—

"which is the principal currency anthority under the law for the time being in force in any Gold Standard country," The Committee agreed to insert the following new sub-cause 15 (*a*).

"the borrowing of money for a period not exceeding one month for the purposes of the Bank's business and the giving of security for money so borrowed.

Provided that no money shall be borrowed from any person in British India save a bank mentioned in the First Schedule.

Provided also that the amount so borrowed shall not exceed the amount of such paid up capital as the bank may have or failing that Rs. 4 crores."

It was explained that this power was necessary in connection with the obligations of the Bank as regards remittance to the Secretary of State and it was also equally essential that the Bank should be able to borrow on occasions in India in order to facilitate its control of credit.

Clause 16 and 17.—These were agreed to. The question of clearing house was taken up and the Committee agreed to a Resolution that it was desirable that arrangements should be made for the Reserve Bank to supervise Clearing House business and that the question should be left open for considration after the Imperial Bank had been consulted.

Section 15.—It was suggested that this Section left it open to the Bank to do considerable business outside the limits prescribed in Section 14. The Finance Member justified the necessity for this Section as follows :—

It is desirable to give the Reserve Bank a weapon by which it may make its discount rate effective. The Reserve Bank will be responsible for conserving the money market, and enabling member banks to make payments in critical times. The function will be performed by the Reserve Bank by its discount policy. If at such a time certain member banks should refuse to follow the lead of the Reserve Bank the latter ought to be in a position to fulfil its obligations to the public by making its discount rates effective. In other words, it should be in a position to force banks to follow its leadership. To do so the Reserve Bank would go into the open market and buy or sell bills of exchange, bank acceptances or other highly marketable paper. This enforcement of the bank rate could not be done by a Reserve Bank which was prohibited by law from dealing with the public.

It was then suggested that the previous sanction of the Governor General in Council should be taken for exercising this power and that the condition under which the Bank would be allowed to go into the market direct for discounting should be prescribed. As against this it was pointed out that the very essence of the power was the Bank, should be able to enter the market at the psychologocal moment without waiting for the sanction of the Governor General in Council. After full discussion it was agreed that this power was necessary but it should be distinctly understood that the Reserve Bank would not enter into everyday competition with the banks. Eventually it was decided to substitute the following for the words "after such date as the Governor General in Council may fix in this behalf" :—

"When in the opinion of two-thirds of the members of the Board present at a meeting it is necessary that action should be taken under this Section in the interests of Indian trade and commerce or for the purpose of enabling the Bank to perform any of its functions under this Act".

Section 16—clauses 1, 3 to 5.—These were agreed to without any change.

Clause 2.—It was decided to substitute the words "debentures, if any" in place of the word "shares" where it first occurs, and also to have the words "bank or corporation or any company" in place of the words "bank or any company." It was also suggested that it might possibly be desirable to add a provision to enable the Bank to buy up and cancel its own debentures.

Clause6.—It was agreed to add at the end of this clause the words "or current account" in order to make it clear that both current accounts and fixed deposits were meant.

Sections 17 and18.—The Committee decided to alter the words "the Government of India debt" into "the public debt" in sections 17 and 18 so as to include the debt of Provincial Governments and in clause 2 of Section 18 to insert the words "and each local Government" after the words "the Governor General in Council." The Finance Member explained that this meant that the Punjab Government would be required to entrust the management of its public debt with the Reserve Bank, taking it away from the Imperial Bank and he reserved to himself the right to reopen the question.

Sir Purshotamads Thakurdas wanted to omit the words "exchange, remittance and other" in Section 17 and to insert the following sentence at the end :—

"The Bank shall also undertake the exchange and remittance operations of the Governor General in Council and execute the same on Government's account and risk at most favourable terms available in the market from time to time."

The Finance Member explained that the Government would enter into an agreement with the Bank by which it would get all the sterling that it required as and when it required it, on certain conditions and subject to the demands being reasonable. The Bank would ordinarily so arrange the location of its funds that it would always have a sufficient sum in London to meet the reasonable requirements of the Secretary of State and it would be open to the Bank to decide whether it wil provide these remittalnces so to speak from hand to mouth as required by Government or should anticipate future needs. The Bank will simply undertake the obligation to provide funds to the Secretary of State in London, his needs having been defined in advance and the Bank being protected at the same time against any unreasonable demands. There is therefore no question of making remittance at the risk of Government. He was prepared to agree to the suggestion that the Government would not expect to get anything from the Bank other than the market rate in respect of the funds it required. The Finance Member said both these points were included

in the phrase "on such conditions as may be agreed upon." After further discussion it was proposed that an outline of such conditions should be drafted on the following basis:—

> "Such conditions should include provisions protecting the Bank against unreasonable demands by the Government or unreasonable modifications of the programme previously agreed upon and should also ensure that the rate at which the remittance transaction as between the Government and the Bank is effected should be approximately the market rate of the day on which it is effected."

As regards the question whether any such proviso should be included in the Act itself, the Finance Member replied that the question would require further examination. The Finance Member also agreed to circulate to the Committee at Calcutta a memorandum containing the rough draft of the conditions which are contemplated in Section 17 in respect of the agreement between the Government and the Reserve Bank.

A question was raised whether Government business in Section 18 included business of the Secretary of State in Council. The Finance Member explained that the Secretary of State had agreed to amend Section 23 of the Government of India Act so as to enable the Reserve Bank to undertake the business of the Government of India in London as well as in India.

Sections 19 and 20.—These were agreed to without any change.

Section 21.—It was explained that the omission of one rupee notes in the denominations specified was due to the fact that Government did not desire to issue one rupee notes until they had reduced the surplus silver rupees to a reasonable amount.

It was suggested that the denominations of the notes should be expresed in terms of gold instead of rupees. The Finance Member said that this might be done by having a definition that a gold rupee is a rupee representing so many fine grains of gold and that in the Bill 'gold rupees' might be used instead of "rupees". This was not accepted by Mr. Chetty who said that there must be a standard gold coin and that the note should be expressed in terms of that coin. It was argued that this would have a strong psychological effect and that the people would realise that the currency of India had really been linked to gold, though for all practical purposes the people of India might not actually get a stanard gold coin; they might however get billion under certain circumstances. The Committee realised perfectly that there was no likelihood of the standard unit being freely coined and that it could only be coined at the option of the Government. It was suggested that it was possible to make that gold coin legal tender in the relative clauses of the Bill and also to give Government authority to issue that coin though only at their option without infringing the principles of the Bill. It was further prescribed that gold coin could not be demanded by the public in return for paper notes or rupees until fresh legislation had been undertaken and passed, that is, India would not have a free gold currency but the currency would be definitely linked to gold by this proposal in a manner which could not be disturbed except by statute hereafter.

The Finance Member referred to the recommendation of the Finance Department made to the Currency Commission about the introduction of a gold currency. The Commission had examined the proposal and were satisfied that the risk was too great. The Finance Member was prepared to accept that conclusion. He reiterated the statement of the Currency Commission that if in the future India had large gold reserves and the world conditions were favourable and the Legislative Assembly and the Government all agreed to have a gold currency, they could then bring it into existence. As regards the suggestion that the people of India should be allowed to take their gold to the Mint and have it converted into gold coin, the Finance Member replied that this proposal would definitely make it impossible to maintain the stability of exchange.

In order that the standard coin may be something more than national, the Commitee decided that it should be a coin of Rs. 20 called a mohur and that the bank notes should be expressed in terms of rupees and of the gold mohur. The following draft was then aproved by the Committee:—

Section 21.—Bank notes shall be of the denominational values of one-fourth mohur or five rupees, half mohur or 10 rupees, one mohur or 20 rupees, 2½ mohurs or fifty rupees, 5 mohurs or 100 rupees, 25 mohurs or 500 rupees, 50 mohurs or 1,000 rupees, 500 mohurs or 10,000 rupees and of such other denominational values, if any, as may be directed by the Governor General in Council.

It was also suggested that a clause should be inserted defining the standard coin, namely, gold mohur. The Finance Member undertook to consider these proposals and to ascertain the views of the Government of India and the Secretary of State.

The proposal to change the unit of account from rupees to mohurs was not pressed as the Finance Member pointed out that it would involve needless complications at this stage.

Sections 22 and 23.—These were agreed to without any change. A desire was expressed that the signature of one of the Government officers should also appear on the notes and if permitted also the King's head. The Finance Member promised to consider this point before the Calcutta meeting.

Section 24.—It was decided to recast this Section in order to make the intention clearer.

> "Any bank note re-issued from any office of the Bank shall be sterilized and disinfected before re-issue and the Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Section 25.—It was explained that this section did not make any change in the existing law, as it was only a repetition of an existing section in the Indian Paper Currency Act. The Committee agreed to this Section on condition that the present practice by which two-halves of a cut note pasted together are accepted as legal tender will remain unaffected. The proposal to retain the words "as of grace" at the end of the Section was put to the vote and carried.

Section 26.—This was agreed to with the change that the words "his account with a banker, shroff or agent" were to be substituted for all the words from "bankers, shroffs or agents" to the end of the proviso.

Section 27.—This was agreed to.

Section 41—clause (1).—The question was whether all banks should be compelled to come or allowed an option to refuse to come under the provisions of this Section. The point was made that some banks may not seek rediscounting facilities and therefore would prefer to remain outside. It was explained by the Finance Member that it was desirable in the interests of the creation of a proper machinery for the control of currency and credit that all banks of any importance should be compelled to come under the provisions of this Section, but he explained the difficulties arising from inability to devise a satisfactory definition of "bank". The question whether the Committee was prepared to have a Reserve Bank without any compulsory deposits was put and lost.

The proposal that these deposits should be in the form of current account was also lost.

The next question was whether the First Schedule should be accepted or whether the Schedule should be extended so as to include a larger number of banks. After full discussion the following motion was put to the Committee, namely,

(1) "that it is desirable that the Imperial Bank and all registered companies doing banking business in India with a paid up capital of not less than Rs. 3 lakhs be compeled to make deposits with the Reserve Bank as provided for by Section 41, and

(2) that the draftsman be requested to bring up in Calcutta draft amendments to the Bill securing this object."

The motion was carried.

One member inquire whether it was the intention to leave out private persons or individuals doing the business of banking and the Chairman replied it was the intention to exclude them and the means to secure this end would be considered in the final draft.

The question arise whether money borrowed on call would be a demand liability to which the Finance Member answered in the affirmative. He did not see any difference between money borrowed overnight and money borrowed for a long period. In order to provide for temporary deficiencies in the compulsory deposits, the Finance Member agreed to consider a provision on the lines of the Federal Reserve system to compute the Reserve in practice by averaging the daily net deposit balance over a bi-monthly period.

The question of reducing the percentage of compulsory deposits in the Bill was then considered. Referrence was made to page 58 of the printed opinions in which it was pointed out that this compulsory deposit of 7½ and 2½ per cent. meant a segregation of funds in addition to ordinary till money, involving a distinct loss of interest. As against this it was pointed out that the tendency would be for the banks to keep less money in their tills in view of the fact that they would have cash balances with the Reserve Bank and that it was incorrect to say that they would have in future to keep exactly the same free balances as at present.

As regards the apprehension that these compulsory deposits would mean so much less money in circulation, the Finance Member replied he did not see any reason for this fear as money would circulate in the same way whether it was in the till of the Reserve Bank or of the indigenous bank. It was stated in some of the opinions that the Reserve Bank would use these compulsory deposits to compete with the depositing banks, but the Finance Member pointed out that there could be no question of competition because the Reserve Bank would use that money in support of the general superstructure of credit, in this country and the purpose of the Reserve Bank was definitely not commercial business. Proposals to reduce the percentages 4 and 2, to 5 and 2 and 6 and 2 per cent. respectively were not accepted and the proposals in the Bill were allowed to stand.

Clause 2.—The Committee desired that the exchange banks should show all their liabilities and all their assets in India. The Finance Member agreed to bring forward an ammendment to bring out that intention.

Various suggestions were made to add to the information required under clause 2 as it was argued that the information provided in the Bill would not give a true statement of the actual financial position of any bank. It was explained that the object of this clause was to ensure the minimum of information to enable the Reserve bank to see that the provisions of sub-clause (1) were being compiled with, while it also met certain statistical requirements. It was ultimately decided to leave this sub-clause as it stood subject to the drafting alterations in clause (*a*) already decided on.

Clause 3.—This was agreed to.

Clause 4.—It was argued by some members that if a statement is to be published, it must be a complete statement so that the public may not be misled as to the bank's position. On the other hand, some members thought that it was undesirable to publish the bank's balance sheet every month and preferred to the publication of only the actual requirements of the Reserve Bank. The Finance Member said that in view of the fact that it was proposed to add a a large number of banks to the list of Scheduled Banks, this section might be dropped for the present, but if on further consideration such statement is found necessary he would bring an amendment in the Assembly to restore it. This was agreed to.

Clause 5.—This was agreed to.

Clause 6.—It was agreed to substitute the following for lines 6 to 10 of this clause:

"further return or make such inspection of the books and accounts of the bank as may be necessary to ascertain the amount of the deficiency, if any, and the period during which it has continued, and the bank so in default shall be."

If the clause as at present, the Governor General in Council could not order the inspection of books and accounts of a bank unless it had shown default, whereas one of the objects of such inspection might be to discover whether such bank was in default or not. The amendment was designed to provide for such contigency.

Clause 7.—This was taken up and it was decided that this clause would depend upon the question whether the extension of the list of banks required to place compulsory deposits with the Reserve Bank should be achieved by mere definition of a "bank or banker" or by a new Schedule of the banks.

Two memoranda by the Finance Member, one on the remuneration payable to the Imperial Bank under the provisions of Schedule II to the Bill and another on the possibility of giving India a gold currency, were circulated to members of the Joint Committee.

The Chairman announced that the Committee will next meet on the 18th July at Calcutta at 11 o'clock.

JOINT SELECT COMMITTEE'S REPORT

We, the undersigned, Members of the Joint Committee to which the Bill to establish a gold standard currency for British India and constitute a Reserve Bank of India was referred, have considered the Bill and the marginally noted papers, and have now the honour to submit this our Report, with the Bill as amended by us annexed thereto.

2. The Committee met in Bombay on the 30th May, 1927, and sat continuously until the 4th June ; and met again in Calcutta on the 18th July and sat until the 25th. Only one member of the Committee, who is unfortunately detained in England, has failed to attend one or other of the meetings, and on each occasion 25 out of 28 members were present.

3. We have made a number of changes in the Bill, several of considerable importance. We think, however, it would be more convenient to deal with the Bill clause by clause, referring to the amendments which we have made as they occur rather than to discuss matters of greater importance separately.

In this connection we desire to make it clear that, although we have attained unanimity on a large number of matters of importance, certain of the decisions at which we have arrived are decisions which a minority are not prepared to accept. We are, however, of opinion that, the decision of the majority being the decision of the Committee as a whole, it is undesirable to refer, as has been not infrequently the practice in the past, to particular decisions as being the decisions of a majority only.

4. *The title and preamble.*—We prefer the phrase "A Gold Standard" to the phrase "A Gold Standard Currency" as the Bill does not in fact purport to set up a gold currency, and a phrase which included that word might be liable to misconstruction.

Clause 1.—The latest date fixed for the commencement of the Act in sub-clause (3) of this clause as originally framed was the 1st day of January, 1929. We propose to alter this date to the 1st day of July, 1929, in view of the fact that it may prove inconvenient to inaugurate the Reserve Bank in the middle of the busy season, and, therefore, if the original date is retained, the Bank might have to be brought into being with undue haste during 1928.

Clause 2.—We have altered the definition of "bank note" in view of the fact that the bank note which it is proposed to issue will not be in the form of a promissory note payable to bearer on demand.

We have inserted a definition of "provincial co-operative bank" which is necessitated by the provision which we have made in clause 14 (now clause 11) for linking up the co-operative system with the Reserve Bank.

Clause 4.—This clause embodies what is perhaps the most important alteration which we have made. We have decided to substitute a Bank with capital supplied by Government in place of a Bank with private share capital as was provided for by the Bill as introduced. The reasons which have led us to favour a change of this nature are as follows :—

In the first place, it was thought that a banking institution the primary object of which was the control of the credit and finances of the country would, if directed by a body responsible only to a number of private shareholders, tend to be controlled by vested interests, and would therefore fail to secure the confidence of the Indian public ; and that its utility to the public might even be endangered by a conflict of interest within the management of the Bank between Indian and external capital.

Secondly, we consider that joint-stock principles are not suitable in the case of a Central Bank the management of which should be carried on with an eye more to the public interest than to the accumulation of profits for shareholders.

We note in connection with this clause that we have substituted throughout the Bill the words "crore" and "lakh" for the references to "millions" which the Bill originally contained.

The abolition of share capital involves a number of consequential changes in the Bill, to the more important of which attention will be called in the course of our report. It involves, however, in the first instance, the omission of clause 5 and the subsequent re-numbering of other clauses.

Clause 5 (originally clause 6).—We think that provision should be made requiring the opening of a branch of the Bank at Rangoon. We also think that the previous approval of the Governor-General-in-Council should be obtained to the opening of any new branch of the Bank outside India.

Clause 7 (originally clause 8).—We have effected important alterations in this clause, the first of which is the omission of the provision prohibiting members of the Indian or Local Legislatures from being nominated or elected as Directors of the Bank. The Committee consider that a provision of this kind would deprive the public of the services of a considerable number of those who are versed in public affairs and finance and are unable to subscribe to the view that a member of the Legislature would, by reason only of occupying that position, be unable to fulfil his duties as a Director of the Bank.

Secondly, we agree as to the desirability of the provision originally contained in the Bill excluding Directors of other Banks, on the ground that the Board of the Reserve Bank will have to exercise a close scrutiny over the financial position of all Banks likely to require financial assistance by way of rediscounts or advances, and also on the ground that the presence on the Board of the Reserve Bank of representatives of other Banks would enable those other Banks to obtain information regarding the business of their competitors ; but we do not think the same arguments apply in the case of Co-operative Banks, and we have accordingly provided that there should be no bar to the inclusion in the Board of Directors of Co-operative Banks.

Finally, we have added a clause (*d*) on the lines of clauses contained in certain other enactments establishing Central Banks, providing that no person shall be eligible either for nomination or election to the Board, unless he is or has at some time been actively engaged in agriculture, commerce, finance or industry. We are of opinion that a clause of this kind, though possibly somewhat vague, is essential, and we have endeavoured by an *Explanation* to make it clear that a person who is or has been a director of any company or corporation shall be deemed eligible under the clause.

Clause 8 (originally clause 9).—The principal difficulty in connection with this clause has been to devise a scheme for the constitution of a Board in place of the original scheme under which a large majority of the Directors were elected by the shareholders. The Committee have considered at great length various alternative schemes placed before them and have eventually decided on a scheme which ensures a majority upon the Board of Indian elected members. The scheme provides for a Governor and Deputy Governor, two Directors nominated by the Governor-General in Council, two Directors elected by the Associated Chambers of Commerce, two Directors elected by the Federation of Indian Chambers of Commerce, one Director elected by the provincial Co-operative Banks, three Directors elected by the Indian Legislature, three Directors elected by,

the Local Legislatures, and one officer of Government appointed by the Government. Considerable discussion took place as to the desirability of an electorate consisting of the Indian Legislature or the Local Legislatures. The Committee eventually favoured the view that, out of the proposed fifteen Governors, three should be elected by the elected members of the Central Legislature and three by those of the Provincial Legislatures, because the said elected members represent together all the various interests of the people as a whole; and that it is reasonable and just that on the Reserve Bank of the country there should be some Governors elected by such general electorates, in addition to those who will be elected by the Chambers of Commerce and the provincial Co-operative Banks, which bodies represent special interests.

In addition to those provisions of the clause to which we have already drawn attention, we have provided that either the Governor or the Deputy Governor must be an Indian, and that the two Directors who are to be nominated by the Governor General in Council under clause (*b*) shall also be Indians.

The supplementary provisions which we have made in sub-sections (*2*) to (*7*) of this clause include a provision that the Board shall be consulted as regards the appointment of the successors to the first Governor and Deputy Governor, and that all elections shall be held under the system of proportional representation by the single transferable vote. Sub-clause (*7*) gives power to the Governor General in Council to make such regulations as may be necessary for determining the manner in which the elections shall be held.

Clause 10 (originally clause 11).—We have inserted words to make it clear that meetings of the Board may be held more frequently than once in each month and have provided that meetings at Calcutta shall be held at least three times in each year rather than once in every four months.

Clauses 12 and 13 of the Bill as introduced have been omitted owing to the elimination of shareholders. Clause 13, which contained temporary provisions, was only necessitated by the fact that the constitution of a Board was necessary for the purpose of issuing the share capital.

Clause 11 (originally clause 14).—We have made a small amendment in sub-clause (*1*) to make clear what was always the intention, namely, that the Bank should be allowed to receive deposits, not bearing interests, from all persons without restriction.

Sub-clause (*2*).—This sub-clause as well as clause 12 (originally clause 15) is intended to refer to inland bills of the kind defined in section 11 of the Negotiable Instruments Act, 1881, and is in accordance with similar provisions in other statutes constituting central banks. The restriction to scheduled banks of the facilities provided in this section and elsewhere is intended to give to the scheduled banks some compensating advantage for the obligation which the Bill imposes upon them to maintain compulsory deposits free of interest in the Reserve Bank. We have also thought it advisable to make it clear that the days of grace for which provision is made in section 22 of the Negotiable Instruments Act, 1881, may be added to the periods of maturity referred to in this clause and elsewhere.

As India is predominantly an agricultural country, it seems to us desirable to increase the scope of clause (*b*) of this sub-clause by raising the limit of bills and notes purchased or rediscounted from one-fifth of the total value of all bills and notes purchased or rediscounted by the Bank to one-quarter, and a similar and consequential amendment has been made in clause (*c*) of sub-clause (*4*).

Sub-clause (*3*).—This sub-clause as originally framed gave the Bank full discretion to purchase and sell the currencies of any foreign country having a gold standard. We think that such a wide discretion is undesirable and that operations of this nature should be confined to such countries having a gold standard as the Governor General in Council may designate for the purpose.

Sub-clause (*4*).—A small amendment has been made to make it clear that the loans and advances referred to include loans and advances re-payable on demand.

Sub-clause (*8*).—We have drafted this sub-clause to take the place of original sub-clauses (*8*), (*9*) and (*10*) which provided that the Bank might purchase and sell certain securities for the purpose of the investment of its capital or Reserve Fund. Capital and the Reserve Fund, however, although shown separately in the statement of the Banking Department, would necessarily both form part of the general funds of that Department, and it might be difficult to say in respect of any particular transaction whether it was a transaction on behalf of capital or of the Reserve Fund, or partly on behalf of the one and partly of the other. The only object of the clause is in fact to limit the total amount of securities which may be held and not to lay down the purpose for which such securities may in each case be purchased. Further, the date of the purchase of securities upon which emphasis was laid in sub-clause (*10*) as originally drafted is irrelevant, the only consideration which is of any importance being the remaining time which the securities have to run. Finally, our re-draft renders it possible for securities held by the Bank to pass automatically from the long-dated to the shorter-dated class which would have been precluded by the use of the words "from the date of their purchase" occurring in the proviso to sub-clause (*10*) of the original draft.

Sub-clause (*13*) [*originally sub-clause* (*15*)].—We think that the power of the Reserve Bank to open accounts and act as agents of other banks should be restricted to central banks which are the principal currency authorities in their respective countries and among which we include the Federal Reserve Banks in the United States of America.

Sub-clause (*14*).—It is essential that the Bank should have power to borrow in London in view of the obligation imposed upon it to keep the Secretary of State in funds, and it is almost as essential that the Bank should be able to borrow in India so as to facilitate the control of credit. The limitation which this clause as now drafted by us provides will prevent the Bank from using its power of borrowing in order to compete with other banks for fixed deposits.

Sub-clause (*16*) [*originally sub-clause* (*17*)].—We considered the desirability of making specific mention in this sub-clause or possibly elsewhere of the power of the Reserve Bank to supervise clearing house business. We, however, consider this to be so clearly a banking function which may suitably be undertaken by the Reserve Bank that it is hardly necessary to make special mention of it.

Clause 12 (originally clause 15).—It is admitted that the power which this clause proposes to give to the Reserve Bank to operate in the bill market is necessary to enable the Bank to fulfil its responsibility for conserving the money market and for enforcing its discount policy. But we consider it necessary to lay down distinctly that the Bank is not entitled to enter into indiscriminate competition with commercial banks, and for this reason we have provided that action under this clause must be approved of by a majority of the Board of Directors and have indicated the purposes for which alone they should approve the undertaking of such operations.

Clause 14 and 15 (originally clauses 17 and 18).—We think it desirable that the Reserve Bank should have control of all Government balances, not excluding those of such of the Local Governments as may have the custody and management of their own provincial revenues, and we have provided accordingly in this clause. We note that an amendment of section 23 of the Government of India Act will be

necessary to enable the Secretary of State in Council to utilise the services of the Reserve Bank and to keep his balances with the Reserve Bank instead of with the Bank of England, and we understand that the necessary amendment will be undertaken as soon as this Bill is passed.

Clause 18 (originally clause 21).—We regard it as a matter of the first importance that the transition to a gold standard should be conspicuously marked by the introduction of a standard gold coin which we propose to call a *mohur*. We think that it is only by the introduction under a statutory enactment of a legal tender gold coin that the reality of the gold standard can be brought home to the public in India. We have accordingly provided in clause 48 for an amendment of the Indian Coinage Act which will give the Governor General in Council the statutory power of coining a *mohur*, which will contain 169.5024 grains of fine gold, being the equivalent of the gold value of twenty rupees, to be the standard of value under the new system. We realize, however, that it is not possible to give the public the right of having gold bullion coined into *mohurs* at the mints. Whilst, therefore, we have recognized, by the amendments which we have made in this clause (clause 18) that the new *mohur* is to be the standard of value and a definite proof that Indian currency has been linked to gold, we have provided that the amount of *mohurs* to be coined shall be in the absolute discretion of the Governor General in Council.

Clause 19 (originally clause 22).—We think it desirable that the bank notes to be issued by the Reserve Bank should bear the signature of an officer of Government and also, if possible, an engraving of the portrait of His Majesty, in order that the public may not lack confidence in treating them in every way as legal tender. In view of the fact that the bank notes are to be guaranteed by the Government of India, we understand that it will be possible to meet our desire in this matter.

Clause 22 (originally clause 25).—We observe that the present practice by which a note may be cut into two halves and the halves, when pasted together, accepted as legal tender remains unaffected.

Clause 23 (originally clause 26).—We have altered the proviso from the form in which it stood for many years in order to make it clear that cheques upon overdrawn accounts are not prohibited by this clause.

Clause 25 (originally clause 28).—In sub-clause (2) of this clause we have decided to add to the proviso a condition that, of the proportion of gold coin and gold bullion and gold securities which the clause requires to be held as part of the Reserve after ten years, at least one-half shall consist of gold coin or gold bullion. Our object in making this amendment is to ensure that the free flow of gold into India shall not be checked by any tendency on the part of the Reserve Bank to substitute gold securities for coin or bullion.

In sub-clause (3) of this clause we have increased by 25 crores each of the limits of the amount of rupee coin which may be held at various periods in the Reserve. We understand that the amount of silver coin and bullion now held in the Paper Currency Reserve is 108 crores—an increase of no less than 23 crores as compared with the amounts so held at the time at which the Royal Commission made their recommendations. It would clearly be impossible, without a radical disturbance of the silver market of the world, to get rid of this surplus silver within a period of ten years, and we feel sure that the change is one which would have commended itself to the Royal Commission had they envisaged the problem as it has now presented itself to us. Further, the obligation imposed on the Bank by clause 31 to supply rupees freely to the public on demand might in times of emergency require a larger reserve of rupee coin than the maximum which the Bank was required to keep by the original provisions of this clause. Finally, we desire to express our view that the Government should be extremely cautious as to the time at which, and the amounts in which, surplus silver should be offered for sale.

In sub-clause (4) of this clause we have made an amendment consequential upon the decision, to which we shall presently refer, to retain the sovereign and the half-sovereign as legal tender coins; we have also provided for the valuation of the new *mohur* for the purposes of the Reserve.

In sub-clause (5) of this clause we have raised from one-half to 85 per cent. the proportion of the gold coin and gold bullion held in the Reserve which must be kept in British India. We agree that under certain circumstances it may be advisable to allow gold belonging to India to be located outside India, and we think a maximum of 15 per cent. should be sufficient for this purpose. The possibility of raising the proportion in this manner is largely due to an amendment which we have made in clause 32 whereby the provision for the sale of gold for delivery outside India has been eliminated.

Sub-clause (6) of this clause defines the gold securitise which may be held as part of the Reserve. Following upon our decision to which we have already referred in our remarks on sub-clause (3) of clause 11, we have decided to limit these securities to securities which are not only payable in the currency of a gold standard country whose parity with gold has been firmly established but which are also liabilities of such a gold standard country. We have also omitted clause (*b*), which allowed the holding in the Reserve of bills of exchange drawn on foreign gold standard countries. We agree with the opinion which has been freely expressed that any such provision would be an unnecessary and undesirable feature of a gold reserve.

Finally, we have provided that the sterling securities of the Government of India shall be included among the gold securities which may be held as part of the Reserve.

Clause 31 (originally clause 34).—Though we agree that there is good reason for removing the statutory convertibility of notes into silver coin, we have been assured that the stock of rupees for many years to come will be sufficient to enable the Bank to maintain the existing practice of making rupee coin freely available for purposes of circulation.

Clauses 32 and 38 (originally clauses 35 and 36).—We have replaced the obligation to sell gold at foreign centres by a permanent obligation to sell gold exchange in any gold standard country notified in this behalf by the Government of India. We consider the obligation imposed on the Reserve Bank to keep the value of the internal currency stable will be made capable of fulfilment by this provision, while at the same time it will make it possible for a greater proportion of gold to be held in India—a point to which we have already referred in connection with clause 25.

The original figure for a minimum purchase or sale of 1,065 tolas is based merely on the fact that the weight of commercial bars in London is 400 ounces. We have accordingly reduced this figure in both cases to 250 tolas as being a figure more suited to Indian conditions.

We have made slight amendments of a purely drafting nature in the proviso to sub-clause (3) of clause 32 and in sub-clause (2) of clause 33.

Clause 38 (originally clause 41).—In the Bill as introduced the obligation to maintain balances with the Reserve Bank was imposed only on a limited number of the more important banks in the country. We consider, however, that, if the Reserve Bank is to exercise its proper control over the credit system of the country, this obligation must be extended as widely as possible and should fall upon every bank of any standing or importance doing business in British India. This is in effect a reversion to the actual proposals of the Royal Commission. To facilitate the computation of the requisite propor-

tion of the demand and time liabilities of the banks affected, we have inserted a new sub-clause (*2*) on the lines of similar provisions in the Federal Reserve system of the United States of America, whereby the calculation will be made on a daily average which will be computed in respect of half-monthly periods.

Our decision necessitates a provision which will be found in sub-clause (*7*) of this clause to enable the Governor General in Council to include among the scheduled banks any bank which attains the necessary qualifications and, similarly, to exclude any bank which falls short of that standard. We have omitted the provision which was contained in sub-clause (*4*) of the original clause 41 requiring a summary of the monthly return of each bank to be published, as we agreed with a widely expressed opinion that the particulars required for the purposes of this clause are only a partial statement of the bank's affairs and that their publication might mislead the public as regards the financial position of a bank.

Clause 40 (originally clause 43).—The amendments made in this clause are consequential on the abolition of the provision for share capital. We have been furnished with a rough statement of the estimated cost to the public exchequer of the loss represented by the loss of interest on the present Gold Standard and Paper Currency Reserves which it at present credited to public revenues ; this statement shows that the cost is not likely to be so great as to require the imposition of additional taxation or the retardation of the final extinction of provincial contributions to the central revenues.

Clause 42 (originally clause 45).—The alterations in this clause are purely consequential upon the abolition of share capital.

Clause 48 (originally clause 51).—We have explained the proposal to authorise the coining of a new *mohur* in our remarks upon clause 18, and we have similarly alluded, in our remarks on sub-clause (*4*) of clause 25, to our decision to re-establish the sovereign and half-sovereign as legal tender.

Some members of our Committee, whilst agreeing not to raise during the discussions of the Committee the question of the ratio of the rupee to gold, desired it to be made clear that they are not thereby precluded from raising this matter at the stage when the Bill will be taken into consideration. Provision, therefore, for fixing the rupee value of the sovereign at Rs. 12½ has been adopted by the Committee subject to this reservation.

Other amendments which we have proposed in the Indian Coinage Act are consequent upon the decision in respect of the *mohur* and of sovereigns and half-sovereigns.

The First Schedule.—We have added considerably to the number of banks included in the First Schedule. We desire, however, to offer certain suggestions. In the first place the list of banks is based upon the report of the Registrar of Joint Stock Companies for 1925-26 and will require to be brought up to date. We think it possible that some banks may have been included which are undergoing or about to undergo reconstruction and are not at the moment receiving fresh deposits from the public. We think that the question should be considered of granting power to the Government of India to grant some temporary relaxation of the provisions of clause 38 in such cases, which would necessarily be accompanied by a corresponding withdrawal of rediscount facilities under clause 11.

The Second Schedule.—We have made two amendments of substance in the conditions contained in this Schedule. We have, in the first place, reduced from 25 years to 20 the period during which the Imperial Bank should be entitled to claim balances free of interest at a nominal rate of interest, although we maintain the period of 25 years as the period during which the contract shall be in force. Secondly, we have omitted clause (5) of the conditions, which provided for additional payments in respect of the opening of additional branches as apprehension has been expressed that provision of this kind might prove detrimental to the interests of indigenous banking.

5. We have made a number of other amendments in the Bill which are either of a purely consequential or of a drafting nature and to which we do not think it necessary to refer in detail.

We desire to add that the question was raised as to the continuance by the Imperial Bank of India of the facilities which have hitherto been accorded to Co-operative Banks, and the Committee are of opinion that such facilities should be continued. We have received an assurance from the Government that the possibility of providing for this matter either in this Bill or in the Imperial Bank of India (Amendment) Bill will be considered in due course.

6. We annex to this report copies of the following documents :—

(*i*) a memorandum on gold currency supplied to the Committee by the Honourable the Finance Member.

(*ii*) a memorandum containing the rough draft of the conditions which are contemplated in clause 14 of the Bill in respect of the agreement between the Government and the Reserve Bank also supplied by the Honourable the Finance Member.

(*iii*) a note by the Financial Secretary on the relations between Co-operative Banking and the Reserve Bank, and

(*iv*) the rough statement referred to in our remarks on clause 40.

JOINT SELECT COMMITTEE MINUTES OF DISSENT

Recognising that the Gold Standard and Reserve Bank Bill as redrafted by the Joint Committee reflects a substantial measure of agreement on a large number of important points, more than one of which is at any rate potentially controversial, we, the undersigned members of the Committee, are anxious to say nothing to stir up controversy. Our hope is that eventually a sufficient degree of unanimity may be secured after further discussion of the Bill in the Assembly and the Council of State to make the Bill as finally passed and the new gold standard and the new Reserve Bank when they come into operation generally acceptable to India. We refrain therefore in this minute from pursuing our objections to some provisions in the Bill in its present form with which we are not in entire agreement and confine our observations to those matters to which we attach special importance.

Clause 4.—Our reasons for preferring the original plan of privately subscribed share capital are bound up with the question of the constitution of the directorate of the Bank and are given below in our observations on clause 8. We only observe at this point that, if the whole of the capital of the Bank is subscribed by the Government, it becomes very difficult to ensure that complete independence for the Bank which is essential to its proper working.

Clause 7.—The Royal Commission on Currency recommended that members of the Central and local Legislatures should be ineligible for the office of Director of the Bank, and provision to that effect was made in clause 8 of the original Bill. We recognise the force of the objection that in present circumstances the number of suitable persons likely to be available in India for service on the directorate is none too great and that the exclusion of members of Legislatures tends to narrow an already limited field of selection. But we attach fundamental importance to the principle which is not disputed by the majority of the Joint Committee that the directorate of the Bank should be entirely free to carry out its important functions of control of Currency and Credit policy solely on lines of prudent finance. For this purpose it must not merely be expressly released from control by the Government and the Legislature, but must be free both from the risk of political pressure and from the appearance of being subject to such risk. The presence on the Board of members of the Legislatures appears to us incompatible with this fundamental principle. Moreover, in our opinion, it will be difficult for the same individual to give adequate attention to his duties as director of the Bank if he is at the same time actively engaged in his duties as member of a Legislature. We believe that, even at the present time and still more as the circle of those who are versed in public affairs and finance in India widens, there will be no great difficulty in finding the right men to serve as directors outside the ranks of members of the Legislatures.

Clause 8.—Our objection to members of the Legislatures being eligible for the office of Director applies with even greater strength to the proposal that the Indian Legislature and the Provincial Legislatures should be formed into constituencies for the election of members of the directorate. Such a proposal seems to us to be fatal to the scheme of a Reserve Bank altogether. Under this proposal eight out of fifteen voting members of the Board will be chosen by the Central Executive or the Central Legislature, while three more will be chosen by the Provincial Legislatures, making eleven out of fifteen voting members (in addition to the non-voting Government officer) who will owe their presence on the Board to State intervention. We regard it as fundamental that the majority of the members of the Board must be chosen by constituencies independent of the State. Only so can the full independence of the Board be secured. The proposal further offends against the principle that the constitutional functions of the Legislature do not and ought not to extend to the exercise of executive functions, such as the appointment of persons to specific posts. In so far as such a function has to be exercised at all in the case of the Reserve Bank by or on behalf of the State, it is a function of the Executive and not of the Legislature. We object also to the proposed invidious distinction between elected and other members of the Legislatures.

Our colleagues who voted against the proposal to constitute the Bank with private share capital agreed with us that the directorate must not in any case be subject to the direct control of the Government or of the Legislature. In the absence of a body of shareholders to whom the directorate can be answerable and for whose privately subscribed capital it is responsible, the anomaly arises that the Board once constituted is theoretically responsible to no one either for the capital subscribed by the Government or for the large funds which come under its control from the Government and the public. We were willing to consider the possibility of tolerating this anomaly if we could be convinced that a suitable electorate could be framed for the selection of a majority of the directors (it being essential that the majority should not owe their place to Government nomination) without recourse to the device of private shareholders, and that a suitable directorate could be thus created independent of Government and the Legislature and likely to work well in practice. All efforts to secure these results have failed, and our experience has convinced us that the device of private share capital which is well understood and has worked well in other countries which have had to solve the problem of establishing an independent Central Bank, is the method best calculated to serve India in this connection. We recommend therefore that the Bill be altered back to something nearer its original form so as to provide for private share capital and for the election of at least a considerable proportion of the directors by the shareholders. It would be possible to adapt to a shareholders' bank some of the ideas included in the Bill in its present form, *e.g.*, the election of one director each by the Provincial Co-operative Banks, the Federation of Indian Chambers of Commerce and the Associated Chambers of Commerce, respectively. To meet the point urged against the original proposal, namely, that the whole of the original Board would be nominated by the Government, we should be prepared to entrust to similar electorates the duty of electing in the first instance those of the directors who will thereafter be subject to election by shareholders. We believe that by such means and by providing that at the time of the original subscription of share capital preference in allotment shall be given to (*a*) small subscribers, and (*b*) to persons of Indian domicile, all the objections felt by our colleagues to the proposal to found the Bank with share capital can be overcome in so far as they are valid and that a more satisfactory directorate can be secured by this procedure than by any other.

The provision that either the Governor or the Deputy Governor must always be an Indian appears to us to be objectionable, both as intruding racial and communal questions in a sphere where they ought not to belong and as subordinating the essential requisite of maximum efficiency to other considerations.

Similarly, in the case of the directors nominated by the Government, we object to the inclusion in the Bill of a provison that they must be Indians, though we should be ready to agree that the directors nominated by the Government should always be selected with a view to making the Board as widely representative as possible of the various localities, communities and interests of India as a whole.

Clause 25 (2).—We are of opinion that the provision requiring that after the end of 10 years the amount of gold securities in the Reserve must never exceed one-half of the total gold assets may prove unduly hampering to the Executive of the Bank in the management of the Reserve. The provision that the Gold Bullion must never be less than one-quarter of the Reserve semes to us to impose a sufficient obligation in this respect, and we think that subject to this obligation the Board should be trusted to use its discretion in the interests of India in regard to further accumulations of gold and investments in gold securities.

Clause 48.—For the reasons given in paragraph 66 of the Report of the Currency Commission, we are opposed to the proposal to make the sovereign and half-sovereign which were demonetised by the Currency Act of 1927 once again legal tender. The objections to this proposal are further explained in the memorandum by the Hon'ble the Finance Member which is annexed to the Joint Committee's Report. The same memorandum explains our objections to the proposal to coin a gold mohur and to express the notes of the Reserve Bank in terms of mohurs as well as of rupees (clause 18 of the Bill as now drafted). We are aware that the majority of the Joint Committee realise that it will not be practicable for gold mohurs to be put into effective circulation for at any rate many years to come. We feel, however, that in these circumstances the inclusion of any reference to a gold mohur in this Bill is at best premature and unnecessary and may arouse false expectations among the general public and lead to continued pressure upon the Government to coin mohurs and endeavour to put them into circulation in a way that could only result, were the Government to yield to such pressure, in making it impossible to maintain stability of exchange in relation to gold altogether.

CHARANJIT SINGH.
UMAR HAYAT.

I agree with and have signed the minute of dissent of the Hon'ble the Finance Member except that I would prefer that more definite representation on the Board for Muslims and Zamindars, in proportion to their stake in the country, should be provided in the Bill.

UMAR HAYAT,

Tiwana.

15th August 1927.

I HAVE signed the Report of the Joint Committee appointed to consider the Gold Standard and Reserve Bank in India. Though it may be regarded as an ideal to be achieved in the future, I am not convinced that the present is an appropriate time.

In the first place, the Government of India have just carried through an important change in the currency system of the country, by stablishing the rupee at 1/6d. sterling. I consider that, for some time to come, Government, and no other authority, should be responsible for maintaining the ratio which has been adopted.

In the second place, the custom of financing the trade of the country by means of operations on cash credits rather than by bank bills has become firmly established, and it would be difficult to bring about a change even if this were desirable, which I do not think it would be. This would considerably restrict the scope for remunerative employment of the funds of a Reserve Bank. In this connection it is to be noted that the results achieved by the Reserve Banks in South Africa and Australia have been disappointing.

It is true that the immediate establishment of a Reserve Bank has been recommended by the Currency Commission, and, if this recommendation be accepted, I think that it would be better to give effect to it by transferring the Currency Department of Government to the Imperial Bank, and allowing that institution, at least for a period of years, to carry out the functions of a Reserve Bank.

In the Majority Report of the Currency Commission this method is not supported, but the chapter in which expression is given to the opinion of the Commission on the subject is, to my mind, one of the most unconvincing chapters of the Report.

The Imperial Bank have ready at hand the whole machinery for performing the functions of a Reserve Bank, if there were transferred to an Issue Department to the Bank the Currency Department of the Government of India.

Another advantage of permitting the Imperial Bank to carry out the functions of the Reserve Bank is that it would obviate the necessity for compensating the Imperial Bank at the expense of the other banks in the country. I do not suggest that it is not right that the Imperial Bank should be compensated, notwithstanding the fact that, after 1931, no legal obligation in this direction will exist, but the method by which Government propose to meet this obligation, while it may not result, as has been suggested in indigenous banks being extinguished altogether, will certainly mean that they will be exposed to competition by a State-aided Bank, which will adversely affect their prosperity and standing to an extent to which some of them at least are likely to succumb.

If, however, Government have decided to establish a separate Reserve Bank, the choice would seem to lie between a shareholders bank and a purely State Bank without share capital. Of these two, I am strongly in favour of a shareholders bank, as I fear that the policy of a State Bank would tend to become a political one. In the case of a shareholders bank the Directors would be elected by the shareholders, not on account of their political views, but chiefly on account of their business experience. This is of the greatest importance in the case of a bank with which the other banks throughout the country will be compelled by law to make deposits of their funds amounting to many crores of rupees. Anything in the nature of political control of, or interference with a Reserve Bank would be disastrous.

As the majority of the Committee have decided in favour of the establishment of a State Bank without capital I will now, although I disapprove of the whole scheme, mention certain points in the proposed Bill which appear to me to be open to objection.

In clause 5 it is provided that the Head Office of the Bank shall be established in Bombay, and that it shall have Branches in Calcutta, Madras, Rangoon and London. I consider that, in view of its geographical position, and its commericial importance, having regard both to the present and the future, it would be desirable to establish the Headquarters of the Bank in Calcutta. Failing this I am of opinion that the Headquarters of the Bank should be in Bombay from March to August and in Calcutta from September to February, these periods being the seasons during which money is in strong demand for financing the trade of the country on the Bombay side and Calcutta side, respectively.

In clause 8 it is provided that of the Governor and Deputy Governor, one must be an Indian. I do not object to either of these officers being an Indian, but I think it is most undesirable that any racial dis-

tinction should be introduced in this Bill. The test should be, not whether a candidate for the position referred to is an Indian or a European, but whether he is the person, whatever his nationality may be best qualified to carry out efficiently the duties of the appointment.

I am opposed to the scheme adopted by a majority of the Committee and embodied in clause 8, for the appointment of Directors of the Bank, other than the Governor and Deputy Governor. In particular I am not in agreement with the suggestion that three Directors should be elected by the Indian Legislature and three by the Local Legislatures. While I think that it would be a mistake to lay down that a person who is a member of the Indian, or of a Local Legislature should, for that reason only, be precluded from appointment to the Directorate, as was provided in the original draft of the Bill, I disapprove entirely of the election of Directors either by the Central Legislature or by the contrary, there can be little doubt that Directors so elected would be chosen primarily for political considerations, and, if the Board were constituted, or partly constituted, in this manner, it would not command the confidence of the public, and the standing of the Bank, both in India and in other countries, would be adversely affected.

In clause 11 the Reserve Bank is empowered to deal in Bills of Exchange drawn in or on any place in Gold Standard countries specified on this behalf by the Governor General in Council, having a currency of ninety days exclusive of days of grace. I should have no objection to offer to the Reserve Bank being authorised to deal in Telegraphic Transfer or Bills of Exchange payable on demand, but the purchase of Bills of Exchange having a currency of ninety days involves a commercial risk which I do not consider that the Reserve Bank ought to be authorised to under-take.

In clause 18 it is provided that the value of bank notes shall be expressed in mohurs and fractions of mohurs. In clause 48 it is provided that a gold coin to be called a mohur shall be coined at the Mint in such quantity as the Governor General in Council may direct. I understand that certain members of the Committee, who supported the inclusion of this clause, only intended that, for sentimental reasons, a few gold coins should be minted. I think that it is undesirable at the present stage for Government to undertake the minting of a gold coin at all, as, if political pressure were successfully exercised in favour of the free minting and circulation of gold coins, the cost of the present reform of the Currency would be greatly increased, if indeed it were not rendered impracticable.

Clause 38 provides that every scheduled bank shall maintain a minimum balance at no time less than 7½% of the daily average of the demand, and 2½% of the daily average of the time liabilities of such Banks. I do not know whether it has been realised that this provision will mean, as I have already stated, that scheduled banks will have to deposit with the Reserve Bank funds amounting to many crores of rupees on which they will receive no interest, and which deposits will be in addition to the ordinary balances which the banks will always have to maintain at their different branches. One indigenous Bank will require under this section to deposit. Rs. 80 lakhs, and another Rs. 40 lakhs, with the Reserve Bank. On these large amounts these banks will require to pay interest to their depositors, but will portion of the balances, which they are required to receive no return. I consider that the percentages are too high, and that, in any case, it should be permissible for the scheduled banks to lodge a promaintain with the Reserve Bank, in the form of Government securities on which they would receive interest. The question of what this proportion should be is one for discussion, but I do not think that 50% would be an unreasonable amount.

What is written above represents my personal views only. These views have not been expressed by me as representing the Bengal Chamber of Commerce, who have submitted their opinions with regard to the Bill in a special memmorandum to Government.

J. W. A. BELL.

As shaped in the Joint Committee this Bill is on the whole a progressive measure based on sound principles. It can be improved and made more perfect still by altering it in two or three important directions, and I shall now proceed to state them briefly, one by one.

First, the adoption in clause 25 (2) of the system of proportional reserve to the note issue in preference to the fixed fiduciary system is a serious and deliberate departure from the practice of the Bank of England which experience has proved to be sound. It is claimed for the proportional reserve system that it makes for greater elasticity of the paper currency. I am not sure that this so-called elasticity—which is but another name for violent fluctuations in the volume of the currency in circulation—is an unmixed blessing. It will place an unnecessary and even mischievous power in the hands of the Bank to create drastic deflation and inflation—a state of things which, I trust, the Assembly has no intention to bring into existence. The chief merit of a reserve should be the safety and stability of the note issue and the experts who have repeatedly examined the system prevailing in England have after each fresh examination pronounced themselves in favour of the fixed fiduciary system as the safest. Moreover, in the Bill, even the proportional reserve system is not followed in its entirety. In the United States and South Africa where the proportional reserve system prevails, the the Bank has, in addition to the 40% gold backing against the note issue, a further gold reserve of 35% and 40% respectively against its banking liabilities. If we must have the proportional reserve system, let us have it in an honest form at least.

Secondly, the power given to the Bank under clause 25 (6) of the Bill to invest the assets of its Issue Department in the balances and securities of what are called "gold standard countries" is full of risk. Countries which may be on gold standard to-to-day might cease to be so to-morrow in case of War, political crisis or similar other emergency. The assets of the Issue Department of the Bank, if invested in these countries, will thus always remain exposed to the danger of serious depreciation land even total disappearance. I would, therefore earnestly appeal to the Assembly not to imperial the reserve behind our note issue in this hazardous manner. The only exceptions that may be made are England and the United States of America as the probabilities of their maintaining a free gold market are always greater.

Thirdly, the agreement with the Imperial Bank, Schedule second to the Bill, is unduly generous in favour of that body. The Indian tax payer is being handed over gagged and bound hand and foot for twenty years to the tender mercies of a private shareholders' concern and, in my humble opinion, it is our sacred duty to prevent such unnecessary sacrifice to the India'n Exchequer.

JAMNADAS M. MEHTA.

The 4th August, 1927.

I differ from the majority view about the provisions in this Bill as re-drafted by the Joint Committee on the following points:—

(1) I think the words "A Gold Standard Currency" should be used in the title and in the preamble of the Bill as in the original draft. Even those words do not go as far as I would like, for I hold that free Gold Currency should be progressively introduced in India, and a beginning be made with it immediately. But I shall be content with the words "Gold Standard

Currency," because they at any rate express the idea that Gold Currency is a thing to be counted with and introduced sooner or later.

(2) I cannot support sub-clause 'd' of clause 7, because, in my opinion, the words are so wide that they may, besides being ineffective for the purpose contemplated, also prove mischievous by way of giving scope for litigation, on the ground that a certain person does or does not conform to the description in the clause as a candidate for election or nomination as a Director of the Bank. The explanation under '(d)' does not sufficiently cover this ground of objection.

(3) With regard to clause 31 and clause 48 of the revised draft taken together, I would impose upon the Bank an obligation to issue Gold Mohurs, in any quantity required, in exchange for gold bullion tendered to the Bank, at the rate of 169-5024 grains of fine gold per Mohur. And I would impose a corresponding obligation on the Governor-General in Council, by a suitabe revision of the Indian Coinage Act, to mint and supply to the Bank for issue Gold Mohurs in such quantities as may be required by the Bank. I remain unconvinced by the arguments on this point advanced by the Finance Member in his Memorandum on this subject.

(4) With regard to clause 32, I am not satisfied that, in respect of sale of gold bullion in India, the price fixed is reasonable, namely, twice the normal cost per tola of transferring gold bullion in bulk from Bombay to Gold Standard countries in addition to Rs. 21-3-10.

(5) With regard to clause 38, I am against the rate fixed therein, in respect of the balances which the scheduled banks have got to maintain with the Reserve Bank. This provision imposes an unnecessarily large handicap upon the indigenous banks.

(6) With regard to clause 39, I am against the provision of the Bank entering into an agreement with the Imperial Bank of India for a fixed period of 25 years. I think it is possible to get the agency work of the Bank to be performed by some of the indigenous banks at least to a certain extent, with benefit both to them and the Reserve Bank.

N. C. KELKAR.

Poona;

Dated 3rd August, 1927.

The undersigned differs from his colleagues in regard to the constitution of the proposed Reserve Bank of India, and the composition of its Directorate. To begin with, serious consideration of the implications of the proposal of a State Bank has shown us the advantages of the original proposal of having the Reserve Bank in India established on the basis of a shareholders' bank. The amendments carried on 21st July last by members of the Committee favouring Indianisation, without regard to the efficient working of the Bank, tend to make the Reserve Bank a tool in the hands of politicians. An important amendment, for instance, laying it down that either the Governor or Deputy Governor of the Reserve Bank [clause 8, sub-clause (1)] should be an Indian, was carried by the narrow majority of one, showing that a large number of the members of the Committee were in favour of giving efficiency its due.

In other amendments also where the question of control of the Bank was involved, the undersigned regrets to find that the racial element was introduced again, regardless of the principle of efficiency which, in an institution like the proposed Reserve Bank, should be the only factor guiding decisions relating to the appointment of the Managing Governor, the Deputy Governor and the other Directors. The undersigned maintains that, in the interest of the country, it is essential that no question of race, colour or creed should be allowed to have sway in the appointment of the Managing Governor, the Deputy Governor or any of the other Directors. The undersigned also differs from his colleagues on the question of electing Members of the Indian Legislature as Directors of the Bank, as the amendment which was passed by the Committee suggests. In the opinion of the undersigned, this is a dangerous intrusion of politics into an institution the sole guiding principle in whose administration should be efficiency first and last.

In the circumstances, the undersigned holds the view that no political considerations should be allowed to interfere with the working of the Bank, also that the interests of efficiency can best be served by engaging the best men available as Managing Governor or Deputy Governor, and that as at the present stage of banking in India very few Indians unfortunately have the necessary qualifications, there is, therefore, no alternative but to employ Europeans.

M. SUHRAWARDY.

The 4th August, 1927.

There are some minor points on which we do not agree with the findings of the majority of our colleagues; but we do not think it necessary to append a dissenting minute on all these points. We have signed the report subject to our right of moving amendments in the House on the points on which we have disagreed.

R. K. SHANMUKHAM CHETTY.
A. RANGASWAMI IYENGAR.
V. RAMDAS PANTULU.

I do not agree with the majority view of the Committee on the following points:—

(1) With regard to clause 25 (2). It is a serious and deliberate departure from the practice of the Bank of England to adopt the system of proportional reserve to the note issue in preference to the fixed fiduciary system when the experience has proved the soundness of the latter. It is claimed that the proportional reserve system will ensure greater elasticity of the paper currency. The so claimed elasticity, in its bare form, means the violent fluctuations in the volume of the currency in circulation and I must add that if it is anything, it is a mixed blessing. This elasticity will be not only an unnecessary but even a mischievous power in the hands of the Bank to create, at its sweet will, drastic inflation and deflation, a thing, I trust, the Indian legislature least means to advocate or to bring into existence. The chief merit of reserve should be the safety and stability of the note issue. On repeated examinations of the system prevailing in England, the experts have, after every fresh examination, pronounced fixed fiduciary system as the safest. Even the proportional reserve system in the Bill is not in its entire form. In the United States and South Africa where the proportional reserve system prevails, the Bank has in addition to the 40% gold backing against the note issue, a further gold reserve of 35% and 40%, respectively, against its banking liabilities. If preference must be given to proportional reserve system, let us at least adopt it in its entirety, i.e., its honest form.

(2) I do not agree with clause 25 (4). In place of "8.4751," the figures "7.5334" be substituted.

(3) With regard to clause 25 (5). I not only do not agree with this, but srtongly oppose the keeping of 15% of gold reserve outside of India on the ground that the balance of trade has always been in favour of India. In event of any exception to this taking place, it can easily be forded and met with. History shows this exception to have only occurred once in the past many many years and this cannot give a sufficient cause to justify the keeping any reserve gold outside of this country.

(4) With regard to clause 25 (6). This gives the Bank the power to invest the assets of its issue department in the balances and securities of the "gold standard countries." These investments are full of risks because it is a matter of common knowledge that

war, political crisis and similar other emergencies would overthrow the gold standard existing the day previous. The investments, therefore, in securities in such countries, are surely exposed to a constant danger of serious depreciation and even total disappearance. I earnestly appeal, therefore, to the Indian Legislature not to imperil the reserve behind our note issue in this hazardous manner. Of course England and United States of America are exceptions, having the advantage of greater probabilities of maintaining a free gold market.

(5) With regard to clause 31 and clause 48. Taking both these of the revised draft together I am strongly of opinion that in all fairness the Bank should issue Gold Mohurs in exchange for gold bullion tendered, at the rate of 169-5024 grains of fine gold per Mohur, in any demanded quantities. And I would impose an obligation on the Governor General in Council to revise the Indian Coinage Act and to mint and supply Gold Mohurs to the Bank to enable it to adequately meet its demanded supplies. I must say that the arguments advanced by the Hon'ble the Finance Member in his Memorandum on the subject are far from being convincing.

(6) I do not agree with clause 32 (2) and clause 34. In my opinion, in place of "250 tolas of fine gold", "100 tolas of fine gold" should be substituted.

(7) The Schedule Second to the Bill dealing with the agreement with the Imperial Bank is not only unduly in favour of that body but absolutely one-sided. It also comes in the way of the development of the indigenous Bank. There can be no justification in handing over the Indian tax payer for twenty years gagged and bound hand and foot, at the tender mercies of private shareholders' concern and in my opinion, it is our sacred duty to prevent such unnecessary sacrifice to the Indian Exchequer.

GOVIND DAS.

Dated the 8th August, 1927.

I regret I am unable to agree with the majority of the members of the Committee in their decision for a Bank wihout share capital, and the manner in which it is suggested that the Directors be elected. I am, therefore, signing this report subject to the following minute of dissent.

In considering the establishment of a banking institution, the primary function of which is to control and stabilise credit and note issue finance great care must be exercised to ensure that its operations are directed by men of undoubted qualifications. Effective measures should be adopted not only to obviate the danger of either political or foreign influences, but to create a management whose operation will be free from political or subversive interests.

I cannot concur with the majority of the Committee on the question of a Reserve Bank without share capital. A most efficient operation of such a Bank can best be obtained by means of a shareholders' bank, for directors, who have much at stake through their ownership in industry and allied commercial interest will be more concerned with the success of the bank and its subsequent utility to the public than mere political office holders. Also there is no adequate guarantee that if the Reserve Bank is established without shareholders capital, politicians will not canvass votes from various public bodies having right of nominating members to the Board of Directors.

I do not incline to the opinion that a directorate responsible to private shareholders would tend to be controlled by vested interests or that conflicting motives would arise within the management of the bank between Indian and foreign capital. As for the fear that foreign vested interests might gain control, since the majority of the Board will be Indian as suggested in the report, there is nothing to prevent its refusing to allow foreigners to have any interest in the Bank. This fear may also be allayed by fixing the value of the shares to a small denomination of Rs. 100 each as suggested by the Currency Commission and by reducing the maximum rate of interest to 6 per cent. in order that the shares may be easily held by small genuine investors without much temptation to dispose of them at fancy premium.

In establishing so important an institution as the Reserve Bank it would certainly seem in order to consider the methods followed by other countries of the world in effecting satisfactory reserve bank systems. The United States, Great Britain and France have found joint stock principles suitable in the creation of central banking systems which have proved efficient and there is no reason why they should not be applicable to India.

Granting, without prejudice to my opinion, that it may be desirable to start a Bank without share capital, it is contrary to the interest of any Bank to have its Directors nominated by any Legislatures. By this procedure the Bank will be consigned to the mercy of the political party in power and with so many parties in various legislatures it can be readily seen that it would prove very difficult for them to select qualified and practical men to conduct the business of the Bank. This would result in having men of many masters with possibly very little knowledge of finance at the helm. Political control and political agitations are factors which should not be permitted to effect the operation of any Bank, more particularly a note issue Bank.

There is every reason to keep the authority which controls currency out of politics and it would seem to me that the one great objective in establishing a Reserve Bank is to exclude currency and exchange from the hands of Legislature and Government. If, by vesting control under Legislature, the Bank is brought under Government and legislative control, its worthy object will be utterly defeated. With particular reference to the intermingling of politics and finance of the country I believe that the temptation of watering the currency is too great a one to ever be placed in the hands of political members. I, therefore, maintain that a shareholders bank is the only possible solution for keeping politics and banking apart, particularly in a bank of this type.

The argument for the retention of sovereigns and half sovereigns as legal tender coins, I believe to be untenable, for sovereign has at no time in the past been employed as a legal tender coin. Furthermore, the rate of Rs. 13-5-4 is extremely inconvenient for practical business operations.

KIKABHAI PREMCHAND.

Bombay, 8th August, 1927.

1. I wish to make it clear that I do not give up my conviction as expressed in paragraphs 61-64 of my Minute of Dissent on the Report of the Royal Commission on Indian Currency and Finance. My view expressed there not having met with the approval of the Joint Committee, I tried on the Committee to mould the Bill in a manner least likely to injure the normality of the Indian Money Market and conditions.

2. In proviso to clause 23 of the Bill, I suggest the insertion of the word 'hundis' after the word 'cheques.'

PURSHOTAMDAS THAKURDAS.

The 9th August, 1927.

1. I have signed a joint note with Messrs. A. Rangaswami Iyengar and R. K. Shanmukham Chetty.

2. In addition to the matters referred to therein, I wish to express my dissent on the following points also.

3. I cannot agree to clause 5, sub-clause (d). As it stands, it will keep out from the Board men of eminence in public affairs who were engaged in the professions of Law, Medicine, Teaching, and the like. The clauses in other enactments establishing Central Banks which require directors to be men who are or have been actively engaged in Agriculture, Commerce,

Finance or Industry appear as qualification clauses in the case of a portion of the directorate and not in the form of a general disqualification clause.

Clause 8 (1) (a).—My recollection is that the amendment proposed in the Joint Committee was to the effect that of the Governor and Deputy Governor one at least shall be an Indian. The words at least do not appear in the clause as finally printed. In any case I press for the words at least being inserted to make the intention clear that both may be Indians, if possible.

V. RAMDAS PANTULU.

As regards the constitution I have an open mind.

FAZAL I. RAHMTOOLA.

1. I am opposed to the principle of making Central or Provincial Legislature as constituencies to elect directors of the Bank.

2. Any scheme of Directors which is finally adopted should contain—

(*a*) a general provision to the effect that the interests of agriculturists and minority communities are fairly and adequately represented.

(*b*) His Excellency the Viceroy shall nominate 4 directors.

GHAZANFAR ALI.

JOINT SELECT COMMITTEE'S BILL

[AS AMENDED BY THE JOINT COMMITTEE.]

[Words printed in italics indicate the amendments suggested by the Committee.]

BILL,

TO

Establish a gold standard for British India, and constitute a Reserve Bank of India.

Whereas it is expedient to provide for the establishment of a gold standard for British India; to constitute a Reserve Bank of India to control the working of that standard and regulate the issue of bank notes and the keeping of reserves with a view to securing stability in the monetary system of British India; and generally to make provisions for matters incidental thereto; It is hereby enacted as follows:—

CHAPTER I

PRELIMINARY.

Short title, extent, commencement and duration.

1. (*1*) This Act may be called the Gold Standard and Reserve Bank of India Act, 1927.

(*2*) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

(*3*) This section shall come into force at once, and the remaining provisions of this Act shall come into force on such date or dates, not later than the 1st day of *July*, 1929, as the Governor General in Council may, by notification in the Gazette of India, appoint.

(*4*) Chapter III shall be in force for a period of twenty-five years, and its operation may thereafter be extended for such further period or periods as the Governor General in Council may, by notification in the Gazette of India, direct.

Definitions.

2. In this Act, unless there is anything repugnant in the subject or context,—

(*a*) "the Bank" means the Reserve Bank of India constituted by this Act;

(*b*) "the Banking Department" means and includes all departments of the Bank other than the Issue Department;

(*c*) "bank rate" means the rate published by the Bank under section *41*;

(*d*) "the Board" means the Board of Directors constituted in accordance with section *8*;

(*e*) "bank note" means *paper money issued by a bank;*

(f) "gold standard country" means any country, other than British India, from which any person may obtain gold on demand from the principal currency authority on payment of the equivalent thereof, as prescribed by law, in legal tender currency;

(*g*) "Issue Department" means that department of the Bank which is charged by section *17* with the conduct and management of the note issue;

(*h*) *"principal co-operative bank" means any society or company registered or deemed to be registered under the Co-operative Societies Act, 1912, or registered under the Indian Companies Act, 1913, whose sole business and object is the the financing of those societies in a province which are registered societies as defined in the Co-operative Societies Act, 1912;*

(*i*) "the Reserve" means the assets of the Issue Department as specified in section *25;*

(*j*) "the Reserve Fund" means the Reserve Fund referred to in section *40*;

(*k*) "rupee coin" means silver rupees which are legal tender under the provisions of the Indian Coinage Act, 1906; and

(*l*) "scheduled bank" means a bank *included* in the First Schedule.

CHAPTER II.

INCORPORATION, CAPITAL, MANAGEMENT AND BUSINESS.

Establishment and incorporation of the Reserve Bank of India.

Establishment and incorporation of Reserve Bank.

3. (*1*) A Bank to be called the Reserve Bank of India shall be constituted for the purpose of taking over the management of the currency from the Governor General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(*2*) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

CAPITAL.

Capital of the Bank.

4. (*1*) *The original capital of the Bank shall be five crores of rupees which shall be subscribed by the Governor General in Council.*

(*2*) *The capital of the Bank may, with the previous sanction of the Governor General in Council, be increased or decreased in such manner and to such extent as the Board thinks necessary; and any such increase of capital shall be subscribed by the Governor General in Council.*

HEAD OFFICE, BRANCHES AND AGENCIES.

Branches and Agencies.

5. The Head Office of the Bank shall be established in Bombay, and the Bank shall have branches in Calcutta, Madras, *Rangoon* and London, and may establish branches or agencies in any other places in India or, *with the previous sanction of the Governor General in Council,* elsewhere.

MANAGEMENT OF THE BANK

Management.

6. The general superintendence of the affairs and business of the Bank shall be entrusted to a Board of Directors which may exercise all powers and do all such acts and things as may be exercised or done by the Bank *under this Act.*

Certain persons disqualified for directorships.

7. Save as expressly provided in this Act, no person may be a Director who—

(*a*) is an officer of Government, or

(*b*) is a Director of any other bank *not being a registered society as defined in the Co-operative Societies Act, 1912,* or

(*c*) is an officer or employee of any bank, or

(*d*) *is not or has not at some time been actively engaged in agriculture, commerce, finance or industry.*

Explanation.—For the purposes of clause (d), a person who is or has been a director of any com-

pany as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or of a corporation or company incorporated by or under any law for the time being in force in any place outside British India shall be deemed to be or to have been actively engaged in commerce, finance or industry.

Composition of Board.

8. (1) The Board shall consist of the following Directors, namely:—

(a) a Governor and a Deputy Governor, *of whom one shall be an Indian and* who shall be appointed by the Governor General in Council for a period of five years and shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances respectively as may be determined by the Board:

Provided that the salaries and allowances of the first Governor and Deputy Governor shall be such as may be fixed by the Governor General Council;

(b) *two Directors, who shall be Indians, nominated by the Governor General in Council;*

(c) *four Directors, of whom two shall be elected by the Associated Chambers of Commerce and two shall be elected by the Federation of the Indian Chambers of Commerce;*

(d) *one Director to be elected by the provincial co-operative banks;*

(e) *three Directors to be elected by the elected members of the Indian Legislature, of whom one shall be elected to represent the interests of commerce and industry;*

(f) *three Directors to be elected by the elected members of the Legislatures of the Governors provinces, of whom two shall be elected to represent the interests of agriculture and one to represent the interests of commerce and industry;*

(g) *an officer of the Government appointed by the Governor General in Council.*

(2) *Before appointing any Governor or Deputy Governor other than the first, the Governor General in Council shall consider any recommendation made by the Board in that behalf.*

(3) *The Directors elected under clauses (c) and (d) of sub-section (1) shall hold office for a period of five years, and the Directors nominated or elected under clauses (b), (c) and (f) shall hold office for a period of three years, but any Director shall be eligible for re-nomination or re-election.*

(4) *The Director appointed under clause (g) of sub-section (1) may attend any meeting of the Board and take part in its deliberations, but shall not be entitled to vote on any question arising at any such meeting.*

(5) *Any Director nominated or elected to fill a casual vacancy shall hold office only for the unexpired portion of the term of office of his predecessor, but shall be eligible for re-nomination or re-election.*

(6) *All elections under this section shall be according to the principle of proportional representation by means of the single transferable vote, and shall be held in accordance with regulations made by the Governor General in Council and published in the Gazette of India.*

(7) *Regulations made under sub-section (6) may provide for all matters for which provision is, in the opinion of the Governor General in Council, necessary or expedient for the proper conduct of elections or for the final decision of doubts or disputes regarding the qualifications of any candidate for election or regarding the validity of elections.*

Removal of Governor, Deputy Governor or Director.

9. The Governor or Deputy Governor or any Director *other than the Director* appointed under clause (g) of sub-section (1) of section 8, may be removed from office by the Governor General in Council before the expiration of his period of office, if a resolution is passed in this behalf by the Board by a majority consisting of not less than *ten* Directors.

Meetings of Board.

10. Meetings of the Board shall be convened at *least* once in each month by the Governor. Meetings shall ordinarily be held in Bombay, but *at least three* meetings of the Board shall be held in Calcutta in *each year.*

BUSINESS OF THE BANK.

Business which the Bank may transact.

11. The Bank shall be authorised to carry on and transact the several kinds of business hereinafter specified, namely:—

(1) the accepting of money on deposit without interest from, and the collection of money for, *any* person;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, *drawn and* payable in India and arising out of *bonâ fide* commercial or trade transactions, bearing two or more good signatures, one of which shall be that of a *scheduled* bank, and maturing within ninety days from the date of such purchase or rediscount, *exclusive of days of grace;*

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, *drawn and payable in India and* bearing two or more good signatures, one of which shall be that of a *scheduled* bank *or a provincial co-operative bank, and* drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within six months from the date of such purchase or rediscount, *exclusive of days of grace*: provided that the *total* face value of bills or notes so purchased or rediscounted shall not at any time exceed one-*fourth* of the total face value of all bills and notes purchased or rediscounted by the Bank *up to that time;*

(c) the purchase, sale and rediscount of bills of exchange and promissory notes, *drawn and payable in India and* bearing the signature of a *scheduled* bank, and issued or drawn for the purpose of holding or trading in securities *of the Government of India or a Local Government,* and maturing within ninety days from the date of such purchase or rediscount, *exclusive of days of grace;*

(3) the purchase from and sale to *scheduled* banks and persons approved by the Board, in amounts of not less than the equivalent one *lakh of* rupees, of the currencies of *such* gold standard countries *as may be specified in this behalf by the Governor General in Council by notification in the Gazette of India,* and of bills of exchange (including treasury bills) drawn in or on any place in any such country, and maturing within ninety days from the date of such purchase, *exclusive of days of grace;* and the keeping of balances with banks in such countries;

(4) the making of loans and advances, *repayable on demand or on the expiry of* fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immoveable property) in which a trustee is authorised to invest trust money by any Act of Parliament or by any *law for the time being in force in British India;*

(b) gold coin *or* bullion, or documents of title to the same;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank: provided that *the total of the* loans and advances against such securities as are referred to in sub-clause (b) of clause (2)

shall not *at any time* exceed one-*fourth* of the total loans and advances made by the Bank *up to that time* ;

(*d*) such bills of exchange as are eligible for purchase by the Bank under clause (*3*) ;

(*e*) promissory notes of any *scheduled* bank *or a provincial co-operative bank*, supported by documents *evidencing* title to goods which have been transferred, assigned, hypothecated *or pledged* to any such bank as security for a cash credit granted for *bonâ fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops: provided that no loan or advance shall be made on the security of any promissory note such as is referred to in this sub-clause after the expiry of five years from the date on which this section comes into force ;

(*5*) the making of advances to the Governor General in Council repayable in each case not later than three months after the close of the financial year in respect of which the advance has been made ;

(*6*) the issue of demand drafts and the making, issue and circulation of bank post bills made payable on its own branches ;

(*7*) the purchase and sale of securities, maturing within five years from the date of such purchase, of the Government of any gold standard country *specified in this behalf by the Governor General in Council by notification in the Gazette of India ;*

(*8*) *the purchase and sale of securities of the Government of India of any maturity, or of a Local Government or of a local authority in British India maturing within ten years from the date of purchase: provided that the amount of such securities held at any time in the Banking Department shall be so regulated that—*

(*a*) *the total value of such securities shall not exceed the aggregate amount of the capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits ;*

(*b*) *the value of such securities maturing after six months shall not exceed the aggregate amount of the capital of the Bank, the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits ;*

(*c*) *the value of such securities maturing after one year shall not exceed the aggregate amount of the capital of the Bank, the Reserve Fund and one-tenth of the liabilities of the Banking Department in respect of deposits : and*

(*d*) *the value of such securities maturing after ten years shall not exceed the aggregate amount of the capital of the Bank and the Reserve Fund* ;

(*9*) the custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividends, of any such securities ;

(*10*) the sale and realisation of all property, whether moveable or immoveable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims ;

(*11*) the acting as agent for the Secretary of State in Council, the Governor General in Council or any Local Government in the transaction of any of the following kinds of business, namely :—

(*a*) the purchase and sale of gold or silver ;

(*b*) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company ;

(*c*) the collection of the proceeds whether principal, interest or dividends, of any securities or shares ;

(*d*) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere ;

(*e*) the management of public debt ;

(*12*) the purchase and sale of gold coin and bullion ;

(*13*) the opening of an account with, and the acting as agent or correspondent of, any other bank *which is the principal currency authority of a gold standard country under the law for the time being in force in that country or any of the Federal Reserve Banks in the United States of America ;*

(*14*) *the borrowing of money for period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed*:

Provided that the total amount of such borrowings shall not at any time exceed five crores of rupees or half the aggregate amount of the capital of the Bank or the Reserve Fund for the time being whichever is greater.

Provided, further, that no money shall be borrowed under this clause from any person in British India other than a scheduled bank ;

(*15*) the making and issue of bank notes subject to the provisions of this Act and

(*16*) generally, the doing of all such matters and things as may be incidental or subsidiary to the transaction of the various kinds of business hereinbefore specified.

Power of direct discount.

12. *When, in the opinion of not less than two-thirds of the Directors present at a meeting of the Board, it is necessary or expedient that action should be taken under this section in the interests of Indian trade or commerce or for the purpose of enabling the Bank to perform any of its functions under this Act,* the Bank may, notwithstanding any limitation contained in sub-clauses (*a*) and (*b*) of clause (*2*) of section *11*, purchase, sell or discount any bills of exchange or promissory notes *drawn and payable in India and* arising out of *bonâ fide* commercial or trade transactions, bearing two or more good signatures and maturing within ninety days from the date of such purchase or discount, *exclusive of days of grace.*

Business which the Bank may not transact.

13. Save as otherwise provided in sections *11* and *12*, the Bank may not—

(1) engage in trade or otherwise have a direct interest in any commercial, industrial, or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims: provided that all such interests shall be disposed of at the earliest possible moment ;

(2) *purchase* the shares of any other bank or of any company, or grant loans upon the security of any such shares ;

(3) advance money on mortgage of, or otherwise on the security of, immoveable property or documents of title relating thereto, or become the owner of immoveable property, except so far as is necessary for its own business premises and residences for its officers and servants ;

(4) make unsecured loans or advances ;

(5) draw or accept bills payable otherwise than on demand ;

(6) allow interest on deposits on *current accounts.*

CHAPTER III.

CENTRAL BANKING FUNCTIONS.

Relations of the Bank with the Secretary of State in Council, the Governor General in Council and Local Governments.

Obligation of Bank to transact Government business.

14. The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council *and such Local Governments as may have the custody and management of their own provincial revenues*, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the *public* debt, on such conditions as may be agreed upon.

Bank to have the right to transact Government business.

15. (*1*) The Governor General in Council *and such Local Governments as may have the custody and management of their own provincial revenues* shall undertake to entrust the Bank, on such conditions as may be agreed upon, with all *their* money, remittance, exchange and banking transactions in India and elsewhere and, in particular, to deposit free of interest all *their* cash balances with the Bank:

Provided that nothing in this sub-section shall prevent the Governor General in Council *or any Local Government* from carrying on money transactions at Government treasuries or sub-treasuries at places where the Bank has no branches or agencies, and the Governor General in Council *and Local Governments* may hold at such treasuries and sub-treasuries such balances as *they* may require.

(*2*) The Governor General in Council *and each Local Government* shall undertake to entrust the Bank, on such conditions as may be agreed upon, with the management of the *public* debt and with the issue of any new loans.

NOTE ISSUE.

Right to issue bank notes.

16. (*1*) The Bank shall have the sole right to issue bank notes in British India, and may, for a period of one year from the date on which this Chapter comes into force, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(*2*) On and from the aforesaid date the Governor General in Council shall not issue any currency notes or any other kind of paper money.

Issue Department.

17. (*1*) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 26.

(*2*) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Denominations of notes.

18. Bank notes shall be of the denominational values of *one-quarter mohur or* five rupees, *one-half mohur or* ten rupees, *one mohur or* twenty rupees, *two-and-a-half mohurs or* fifty rupees, *five mohurs or* a hundred rupees, *twenty-five mohurs or* five hundred rupees, *fifty mohurs or* a thousand rupees, and *five hundred mohurs or* ten thousand rupees, and of such other denominational values, if any, as may be directed by the Governor General in Council.

Form of bank notes.

19. The design, form and material of bank notes shall be such as may be approved by the Governor General in Council.

Legal tender character of notes.

20. (*1*) Subject to the provisions of sub-section (*2*), every bank note shall be legal tender at any place in British India in payment or an account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(*2*) The Governor General in Council may, by notification in the Gazette of India, declare that, with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

Re-issue of notes.

21. Any bank note re-issued from any office of the Bank shall be sterilized and disinfected before re-issue, and the Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Recovery of notes lost, stolen, mutilated or imperfect.

22. Notwithstanding anything contained in any *Recovery of notes lost, stolen, mutilated or imperfect.* enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Bank the value of any lost, stolen, mutilated or imperfect bank note;

Provided that the Bank may, with the previous sanction of the Governor General in Council, prescribe the circumstances in, and the conditions and limitation subject to, which the value of such bank notes may be refunded as of grace.

PROHIBITION OF ISSUE OF PRIVATE BILLS OR NOTES PAYABLE TO BEARER ON DEMAND.

Issue of demand bills and notes.

23. No person in British India other than the Bank or, as expressly authorised by this Act, the Governor General in Council, shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand, or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person:

Provided that cheques or drafts payable to bearer on demand or otherwise may be drawn on *a person's account with a* banker, shroff or agent.

Penalty.

24. (*1*) Any person contravening the provisions of section *23* shall, on conviction by a Presidency Magistrate or a Magistrate of the first class, be punishable with a fine equal to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(*2*) No prosecution under this section shall be instituted except on complaint made by the Bank.

ASSETS OF THE ISSUE DEPARTMENT.

The Reserve.

25. (*1*) The Reserve shall consist of gold coin, gold bullion, gold securities, rupees coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(2) Of the total amount of the Reserve, not less than two-fifths shall consist of gold coin, gold bullion or gold securities:

Provided that the amount of gold coin and gold bullion shall not at any time be less than *thirty crores of* rupees in value and shall not be less than one-fifth of the total amount of the Reserve after the end of the fifth year, or than one-quarter of the total amount of the Reserve after the end of the tenth year, from the date on which this Chapter comes into force, *and that, after the end of the tenth year aforesaid, not more than one-half of the total amount of gold coin, gold bullion and gold securities shall at any time consist of gold securities.*

(3) The remainder of the Reserve shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes drawn and payable in British India as are eligible for purchase by the Bank under sub-clause (*a*) or sub-clause (*b*) of clause (2) of section *11* or under section *12*:

Provided that the amount held in rupee coin shall not exceed—

(*a*) during the three years after the date on which this Chapter comes into force, *ninety-five crores of* rupees,

(*b*) during the next three years, *seventy-five crores of* rupees,

(*c*) during the next four years, *sixty crores of* rupees, and

(*d*) *fifty-crores of* rupees thereafter,

one one-tenth of the total amount of the Reserve, whichever amount is greater:

Provided, further, that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the Reserve or five hundred million rupees, whichever amount is less.

(4) For the purposes of this section, gold coin (*other than sovereigns, half-sovereigns and mohurs*) and gold bullion shall be valued at 8.47512 grains of fine gold per rupee, *sovereigns, half-sovereigns and mohurs and* rupee coin shall be valued at *their face* value, and gold and rupee securities shall be valued at the market rate for the time being obtaining.

(5) Of the gold coin and gold bullion held in the Reserve not less than *seventeen-twentieths* shall be held in British India, and all gold coin and gold bullion forming part of the Reserve shall be held in the custody of the Bank or its agencies:

Provided that gold belonging to the Bank which is in any other bank or in any mint or in transit may be reckoned as part of the Reserve.

(6) For the purposes of this section, the gold securities which may be held as part of the Reserve shall be securities of any of the following kinds payable in the currency of any *of such* gold standard countries *as may be specified in this behalf by the Governor General in Council by notification in the Gazette of India, namely*:—

(*a*) balances at the credit of the Issue Department with a bank which is the principal currency authority under the law for the time being in force of such country, *or with any of the Federal Reserve Banks in the United States of America*;

(*b*) securities, maturing within five years, of the Government *of any part of His Majesty's dominions which is a gold standard country or of any other gold standard country specified in this behalf by the Governor General in Council by notification in the Gazette of India*:

Provided that, for a period of two years from the date on which this Chapter comes into force,—

(*i*) any of such *last-mentioned* securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section *11*, and

(*ii*) *sterling securities of the Government of India may be held as part of the Reserve.*

LIABILITIES OF THE ISSUE DEPARTMENT.

Liabilities.

26. (1) The liabilities of the Issue Department shall be an amount equal to the total of the amount of the currency notes of the Government of India and bank notes for the time being in circulation and of an initial amount of *fifty crores of* rupees for the purpose of providing for rupee redemption, which last-mentioned amount shall be reduced by one rupee for every five rupees delivered to the Governor General in Council under the provisions of section *28*, and shall be increased by one rupee for every five rupees received from him under section *29*.

(2) For the purposes of this section, any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value therefor shall, notwithstanding anything contained in sub-section (2) of section *17*, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be; but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

Initial Assets and Liabilities.

Transfer of assets and liabilities to the Bank.

27. On the date on which this Chapter comes into force, the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation, and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, gold securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred and of a sum of *fifty crores of* rupees. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section *25*:

Provided that the total amount of the gold coin, gold bullion and gold securities so transferred shall not be less than one-half of the whole amount transferred.

Supply of coin, and of different forms of legal tender Currency.

Delivery to Government of surplus rupee coin.

28. The Bank may deliver to the Governor General in Council all rupee coin held by it in excess of the amount which the Issue Department is permitted to hold as part of the Reserve under section 25, against payment of four rupees in bank notes, gold or gold securities for every five rupees so delivered.

Purchase of rupee coin.

29. When the amount of rupee coin for the time being held in the Reserve does not exceed two hundred and fifty millions, or one-tenth of the total amount of the Reserve, whichever is greater, the Bank may demand delivery of rupee coin from the Governor General in Council, on payment of four rupees in bank notes, gold or gold securities for every five rupees so delivered.

Obligations of Government and Bank in respect of rupee coin.

30. The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 28 nor to put into circulation any new rupees, except through the Bank and on the Bank's

demand; and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor General in Council under that section.

Obligations to supply different forms of currency

31. The Bank shall issue rupee coin on demand in exchange for currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin, *which is legal tender under the Indian Coinage Act, 1906*, and it shall in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or *mohurs or* rupees or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor General in Council shall, subject to the provisions of section 29, *and of sub-section (1) of section 3A of the Indian Coinage Act, 1906*, supply such *mohurs*, rupees or other coins to the Bank on demand. If the Governor General in Council at any time fails to discharge this duty, the Bank shall be released from its obligations to supply such coins to the public.

Obligation to sell gold and gold exchange.

Sale of gold.

32. (1) The provisions of this section shall have effect from such date, not later than the 1st day of *July*, 1931, as the Governor General in Council may, by notification in the Gazette of India, appoint.

(2) The Bank shall sell gold bullion for delivery in Bombay to any person who makes a demand in that behalf at its office at Bombay, Calcutta, Madras *or Rangoon* and pays in legal tender currency the purchase price as determined under the provisions of this section:

Provided that no person shall be entitled to demand an amount of gold bullion containing less than 250 tolas of fine gold.

(3) The price of gold bullion for delivery in Bombay shall be twenty-one rupees, three annas and ten pies per tola of fine gold with an addition representing twice the normal cost per tola of transferring gold bullion in bulk from Bombay to *such place in a gold standard country as may be specified in this behalf by the Governor General in Council by notification in the Gazette of India*, including interest on its value during transit:

Provided that no such addition shall be made when the rate at which the currency of the country in which the place *so specified* is situate can be purchased in Bombay for immediate delivery at that place is such that the equivalent of the price at which the principal currency authority of that country is bound by law to give gold in exchange for currency is less than twenty-one rupees, three annas and ten pies per tola of fine gold *by an amount equal to or greater than* the normal cost per tola of transferring gold bullion in bulk from the *specified* place to *Bombay*, including interest on its value during transit.

(4) The Governor General in Council shall from time to time determine, in accordance with the provisions of sub-section (3), the price at which the Bank shall sell gold bullion for delivery in Bombay, and shall notify the price so determined in the Gazette of India. Such notification shall be conclusive as between the Bank and any other person as to the price which the Bank shall be entitled to charge in respect of any sale of gold bullion.

33. (1) The Bank shall sell, to any person who makes a demand in that behalf at its office at Bombay, Calcutta, Madras *or Rangoon* and pays the purchase price in legal tender currency, at a rate equivalent to twenty-one rupees, three annas and ten pies per tola of fine gold, the currency of such gold standard country as may be notified in this behalf by the Governor General in Council in the Gazette of India, for immediate delivery in that country:

Provided that no person shall be entitled to demand an amount of currency of less value than that of 250 tolas of fine gold.

(2) For the purpose of determining the equivalent rate applicable to the sale of currency under this section, twenty-one rupees, three annas and ten pies shall be deemed to be equivalent to such sum in that currency as is required to purchase one tola of fine gold in that country at the rate at which the principal currency authority of that country is bound by law to give *currency* in exchange for *gold*, after deduction therefrom of an amount representing the normal cost per tola of transferring gold bullion in bulk from Bombay to that country, including interest on its value during transit.

(3) The Governor General in Council shall from time to time determine the equivalent rate in accordance with the provisions of sub-section (2), and shall notify the rate so determined in the Gazette of India

Obligation to buy gold.

Obligation of Bank to buy gold.

34. The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Madras *or Rangoon*, gold bullion for delivery in Bombay at the rate of twenty-one rupees, three annas and ten pies per tola of fine gold, if such gold is tendered in the form of bars containing not less than 250 tolas of fine gold:

Provided that the Bank shall be entitled to require such gold bullion to be melted, assayed *and refined*, by persons approved by the Bank, at the expense of the person tendering the bullion.

Suspension of Reserve requirements and tax on note issue.

Suspension of Reserve requirements.

35. (1) The Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold in the Reserve gold coin, gold bullion or gold securities of less aggregate amount than that required by sub-section (2) of section 25 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative.

(2) In respect of any period during which the holding of gold coin, gold bullion and gold securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum prescribed by sub-section (2) of section 25; such tax shall be payable at the bank rate for the time being in force with an addition of one per cent. per annum when such holding exceeds thirty-two and-a-half per cent. of the total amount of the Reserve and of a further one-and-a-half per cent. per annum in respect of every further decrease of two-and-a-half per cent. or part of such decrease:

Provided that the tax shall not in any event be payable at a rate less than six per cent. per annum.

Bank exempt from further note tax.

36. Save as provided by section 35, the Bank shall not be liable to the payment of any stamp duty or other duty or tax in respect of bank notes issued by it.

Duration of the privilege of note issue.

Powers of Government in respect of note issue and assets of the Bank in certain circumstances.

37. If at any time the Bank fails to comply with any provision of this Chapter or with any other provision of this Act, the Governor General in Council may, by notification in the Gazette of India, declare that the Bank has forfeited the right of note issue, and shall thereupon take over the liabilities of

the Issue Department, together with such portion of the assets of the Bank as is required to meet such liabilities, and thereafter the business of the Issue Department shall be carried on in the manner prescribed by this Act by such agency as the Governor General in Council may determine.

Cash reserves to be maintained by banks.

Cash reserves of certain banks to be kept with the Bank.

38. (1) *Every scheduled bank shall maintain a balance with the Reserve Bank the amount of which shall at no time be less than* seven and one-half per cent. *of the daily average* of the demand, and two and one-half per cent. *of the daily average* of the time liabilities of such bank in India.

(2) *For the purposes of sub-section (1), the daily average of the amounts of the demand and time liabilities of each scheduled bank shall be computed in respect of each period ending on the fifteenth and on the last day of each month.*

(3) Every such bank shall send to the Governor General in Council and to the Bank a monthly return signed by two responsible officers of such bank, showing—

(a) the amounts of its demand and time liabilities respectiely in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin respectively,

(d) the amounts of advances made and of bills discounted in India respectively, and

(e) the balance held at the Bank,

at the close of the month to which the return relates.

(4) Every such return shall be sent not later than fourteen days after the close of the month to which it relates, and shall state whether the bank has during that month maintained with the Reserve Bank the minimum balance required by sub-section (1).

(5) Any bank failing to comply with the provisions of sub-section (3) or sub-section (4) shall be liable, on application made by or on behalf of the Governor General in Council to the principal Civil Court having jurisdiction in a place where an office of the bank is situated, to a penalty of one hundred rupees for each day during which the failure continues.

(6) When it appears from any such monthly return or from a report of the Board that any *scheduled* bank has failed to maintain the minimum balance required by sub-section (1), the Governor General in Council may call for such further return, or make such inspection of the books and accounts of *that* bank, as may be necessary to ascertain the amount of the deficiency, *if any*, and the period during which it has continued; and *a* bank so in default shall be liable, on application made by or on behalf of the Governor General in Council to the principal Civil Court having jurisdiction in a place where an office of the bank is situated, to a penalty at a rate per annum which shall be three per cent. above the bank rate on the amount of the deficiency for each day during which the default has continued, and shall be raised to five per cent. above the bank rate after the first seven days of the deficiency.

(7) *The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the First Schedule of any company, not already so included, which carries on the business of banking in British India and which—*

(a) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or company incorporated by or under any law in force in any place outside British India, and

(b) has a paid-up capital and reserves of an aggregate value of not less than three lakhs of rupees;

and shall, by a like notification, direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up capital and reserves at any time becomes less than three lakhs of rupees.

Agreement with the Imperial Bank of India.

39. The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for twenty-five years, and shall further contain the provisions set forth in the Second Schedule.

CHAPTER IV.

General Provisions.

Reserve Fund and allocation of surplus.

Allocation of surplus.

40. After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, one-half of the *net annual profits of the Bank* shall be allocated to a Reserve Fund, until such Reserve Fund is equal to *two-and-one-half crores of rupees*, and the remaining one-half shall be paid to the Governor General in Council. Thereafter, until the Reserve Fund is equal to *five crores of rupees*, one-tenth of the *net annual profits* shall be allocated to the Reserve Fund, and the balance shall be paid to the Governor General in Council. When the Reserve Fund is equal to *five crores of rupees, the whole of the net annual profits* shall be paid to the Governor General in Council :

Provided that, until the Reserve Fund is equal to *five crores of rupees, fifty lakhs of* rupees of the *net annual profits*, or the whole of *such profits* if *they are* less than that amount, shall be allocated to the Reserve Fund :

Provided, further, that the Board may, with the sanction of the Governor General in Council, if the Reserve Fund is equal to five crores of rupees, allocate a sum not exceeding one-twentieth of the net annual profits in any year to the repayment, in whole or in part, of any of its capital subscribed by the Governor General in Council, in which case an amount equal to the amount of the capital so repaid shall be added to the Reserve Fund.

Bank rate.

Publication of bank rate.

41. The Bank shall make public from time to time the minimum rate at which it is prepared to buy or rediscount bills of exchange or other commercial paper eligible for purchase under this Act.

Audit.

42. (1) *The auditors of the Bank shall not be less than two in number, shall be appointed annually by the Board, and shall receive such remuneration as the Board may determine.*

(2) *Any casual vacancy during a year in the office of any auditor shall be filled by the Board.*

Appointment of special auditors by Government.

43. Without prejudice to anything contained in section 42, the Governor General in Council may at any time appoint such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Powers and duties of auditors.

44. (1) Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the account and vouchers relating thereto; and every auditor

shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the Board and to the Governor General in Council or, in *the case of auditors appointed under section 43, to the Governor General in Council,* upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Board, whether it has been given and whether it is satisfactory.

Returns.

45. (*1*) The Bank shall prepare and transmit to the Governor-General in Council a weekly account of the Issue Department and of the Banking Department in the Form set out in the Third Schedule or in such other Form as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India.

(*2*) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual account signed by the Governor, Deputy Governor and the Chief Accounting Officer of the Bank, and certified by the auditors, and the Governor General in Council shall cause such accounts to be published in the Gazette of India.

Liquidation.

Provision regarding application of Act VII of 1913 and liquidation.

46. (*1*) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in voluntary or compulsory liquidation save with the sanction of the Governor General in Council and in such manner as he may direct.

(*2*) *Directions under sub-section* (*1*) *may provide for the disposal of the assets of the Bank.*

Regulations.

Power of the Board to make regulations.

47. (*1*) The Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(*2*) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(*a*) the manner in which the business of the Board shall be transacted, and the procedure to be followed at meetings thereof;

(*b*) the establishment of Local Boards and the delegation to such Boards of powers and functions;

(*c*) the constitution and management of staff and superannuation funds for the officers and servants of the Bank;

(*d*) the manner and form in which contracts binding on the Bank may be executed;

(*e*) the provision of an official seal of the Bank and the manner and effect of its use;

(*f*) the manner and form in which the balance-sheet of the Bank shal be drawn up, and in which the accounts shall be maintained;

(*g*) the circumstances in which, and the conditions and limitations subject to which, the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and

(h) generally, for the efficient conduct of the business of the Bank.

Amendments and Repeal.

Amendment of Act III of 1906.

48. In the Indian Coinage Act, 1906, *the following amendments shall be made, namely* :—

(*1*) *After section 3 the following section shall be inserted, namely* :—

The Mohur.

3A. (1) A gold coin, to be called a mohur, shall be coined at the Mint in such quantity as the Governor General in Council may direct.

(2) The standard weight of the mohur shall be 188.346 grains troy, and its standard fineness shall be nine-tenths of fine gold and one-tenth of alloy :

Provided that, in the making of the coin, a remedy shall be allowed not exceeding two-thousandths in weight and two-thousandths in fineness."

(*2*) *In clause* (*a*) *of sub-section* (*1*) *of section 10, after the words "referred to in" the words "sub-section (1) of section 3A and" shall be inserted.*

(*3*) *For section 11 the following sections shall be substituted, namely* :—

Sovereigns and half-sovereigns as legal tender.

"11. Gold coins, coined at His Majesty's Royal Mint in England or at any Mint established in pursuance of a proclamation of His Majesty at a branch of His Majesty's Royal Mint, shall be legal tender in British India in payment or on account at the rate of *thirteen and one-third rupees for one sovereign* :

Provided that such coins have not been called in by any Proclamation made in pursuance of the Coinage Act, 1870, or have not lost weight so as to be of less weight than that for the time being prescribed for like coins by or under the said Statute as the least current weight.

11A. A mohur shall be legal tender in payment or on account :

Mohurs a legal tender.

Provided that the mohur—

(a) has not lost in weight so as to be of less weight than 187.153 grains, and

(b) has not been defaced."

(*5*) *In sub-section* (*1*) *of section 12, after the words "on account" the words "at the rate of twenty rupees for one mohur" shall be inserted.*

(*5*) *In section 16, for the words "where any silver coin" the words "where any gold or silver coin" shall be substituted.*

(*6*) *In section 20, for the word "silver", wherever it occurs, the words "gold or" shall be substituted.*

(*7*) *In sub-section* (*2*) *of section 21—*

(*a*) *in clause* (*a*) *after the words "allowed by" the words "sub-section* (*2*) *of section 3A and" shall be inserted; and*

(*b*) the word "and" *shall be added* at the end

(*b*) the word "and" *shall be added* at the end of clause (*d*), and *after that clause the following clause shall be added, namely* :—

"(e) provide for the acceptance at prescribed rates by officers authorised in this behalf of the gold coins described in section 11 where such coins have lost weight so as to be of less weight than that for the time being prescribed for like coins by or under

the Coinage Act, 1870, at the least current weight."

Repeals.

49. The Indian Paper Currency Act, 1923, and the Currency Act, 1927, are hereby repealed.

[*See section 2 (l).*]

[*See section 39.*]

Provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India.

1. The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India and no branch of the Banking Department of the Reserve Bank of India.

2. In consideration of the performance by the Imperial Bank of India on behalf of the Reserve Bank of India of the functions which the Imperial Bank of India was performing on behalf of the Governor General in Council at the places referred to in clause 1 before the coming into force of the Reserve Bank of India Act, 1927, the Reserve Bank of India shall pay to the Imperial Bank of India a commission calculated on the total of the receipts and disbursements dealt with annually on account of Government by the Imperial Bank of India on behalf of the Reserve Bank of India. Such commission shall be one-sixteenth of one per cent. on the first 250 crores of such total and one-thirty-second of one per cent. on the remainder.

3. Subject to the condition that the Imperial Bank of India shall keep open branches not less in number than those existing at the time of the coming into force of the Reserve Bank of India Act, 1927, the Reserve Bank of India shall allow the following balances to the Imperial Bank of India at the interest rates hereinafter specified, namely :—

(*a*) during the first five years *from that time* —3 crores free of interest;

(*b*) during the *next* five years—2 crores free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 1 crore at 2 per cent. per annum;

(*c*) during the next five years—1 crore free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 2 crores at 2 per cent. per annum; and

(*d*) during the *next five* years—at the option of the Imperial Bank of India, an amount not exceeding 3 crores at 2 per cent. per annum.

4. The Imperial Bank of India shall not, without the approval of the Reserve Bank of India, open any branch in subsitution for a branch existing at the time this agreement comes into force.

[*See section 45.*]

Dated the day of 19 .

CALCULATION OF THE REMUNERATION PAYABLE TO THE IMPERIAL BANK OF INDIA UNDER THE SECOND SCHEDULE TO THE GOLD STANDARD AND RESERVE BANK OF INDIA BILL, 1927.

Clause (2).—The aggregate amount of the total receipts and disbursements dealt with on account of Government by the Imperial Bank of India at its branches (excluding Calcutta, Bombay and Madras) for the two last half years available covering both the slack and busy seasons was Rs. 328 crores. The amount of commission that would be payable to the Imperial Bank under this clause is therefore estimated at about Rs. 18 lakhs. So long as the number of branches remains unchanged and all Government transactions are put through them, the proportion of the total transactions of the Bank to the total Government transactions would naturally tend to remain practically the same and so would the amount of the commission payable to the Bank.

Clause (3).—The value of a free balance of Rs. 1 crore over the 5 years 1921-25, on the basis of employment in India at the bank rate during the period when Government balance was being utilised, and employment in London at 4 per cent. per annum during the period when Government balance was not being utilised, has been worked out by the Imperial Bank, and the result is an average earning power of 5.4 per cent. It would not, however, be possible to keep such balance fully employed and allowing for periods of non-employment, time lost in transit and in making investiments, a better average return than 4 per cent. per annum is improbable. The value of the free balances to the Bank under this clause will, therefore, be Rs. 12 lakhs during the first five years, 10 lakhs during the second five years, 8 lakhs during the third 5 years and 6 lakhs during the last 10 years.

2. Excluding the remuneration proposed to be given to the Imperial Bank under clause (5) for opening new branches—on terms which do not appear to be unduly generous—the arrangement proposed in Schedule II would give to the Imperial Bank:—

	Rs. in lakhs.
(1) Commission on the Government business in the mofussil	18
(2) Value of free balances	12
Total ...	30

The Bank would thus under the agreement obtain a benefit of Rs. 30 lakhs per annum during the first 5 years of the agreement which will be reduced to Rs. 28 lakhs in the second 5 years, 26 lakhs in the third 5 years and 24 during the last 10 years.

3. The Imperial Bank *now* obtains from Government the following direct or indirect remuneration:—

	Rs. in lakhs.
(1) Profit on the administration of the public debt	2.81
(2) Interest on Government balance at Bank rate (quinquennial average) ...	32.91
Total ...	35.72

The value of Government balance to the Bank has been worked out on the basis that at times when the Bank's cash balances, less the balance of Government account, exceeded 15 per cent. of the Bank's total liabilities to the public (other deposits), Government balances were not being utilised, but that at times when the Bank's cash balance so diminished was less than 15 per cent., Government balances were being utilised to the extent of the difference. It is also assumed that the Bank rate was earned on the balances so utilised. The amount of interest earned on Government balances since the inception of the Bank on this basis works out as follows:—

	Rs. in lakhs.
1921	1.74
1922	17.13
1923	32.80
1924	69.66
1925	43.24
1926 (January to June) ...	7.61
Quinquennial average ...	32.91

4. The remuneration which the Imperial Bank now obtained from Government is as shown below just sufficient to compensate the Bank (1) for the cost of conducting the Government business in the mofussil and (2) for the loss in its work of development of branch banking in India. The cost of maintaining Government account at all branches is, according to the statement furnished by the Imperial Bank, Rs. 16.75 lakhs per annum. The aggregate loss for the two past half years suffered by the Imperial Bank on account of the opening of the 100 branches in conformity with its agreement with Government is Rs. 16.20 lakhs, making a total on account of two items (1) conducting Government business and (2) developing branch banking, of Rs. 32.95 lakhs.

5. It is reported by the Imperial Bank that of the 107 new branches and pay offices opened by them, 26 are on a paying basis, 18 are expected to be on a paying basis by 1931, 32 may possibly be on a paying basis by 1931, and 31 are unlikely ever to pay their way.

It is, of course, impossible to forecast the future of these branches and it is probable that the net loss at the end of 25 years may be considerably reduced. It must be remembered that in the absence of some agreement of the nature given in this Schedule, the Imperial Bank would obviously close down all the branches except those which might be making a reasonable profit and would, therefore, be in a position to make a definite profit on the remaining branches. The remuneration therefore must do some thing more than cover the net loss of the Bank over the whole period.

shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the Board and to the Governor General in Council or, in *the case of auditors appointed under section 43, to the Governor General in Council*, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Board, whether it has been given and whether it is satisfactory.

Returns.

45. (1) The Bank shall prepare and transmit to the Governor-General in Council a weekly account of the Issue Department and of the Banking Department in the Form set out in the Third Schedule or in such other Form as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual account signed by the Governor, Deputy Governor and the Chief Accounting Officer of the Bank, and certified by the auditors, and the Governor General in Council shall cause such accounts to be published in the Gazette of India.

Liquidation.

Provision regarding application of Act VII of 1913 and liquidation.

46. (1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in voluntary or compulsory liquidation save with the sanction of the Governor General in Council and in such manner as he may direct.

(2) *Directions under sub-section (1) may provide for the disposal of the assets of the Bank.*

Regulations.

Power of the Board to make regulations.

47. (1) The Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely :—

(a) the manner in which the business of the Board shall be transacted, and the procedure to be followed at meetings thereof;

(b) the establishment of Local Boards and the delegation to such Boards of powers and functions;

(c) the constitution and management of staff and superannuation funds for the officers and servants of the Bank;

(d) the manner and form in which contracts binding on the Bank may be executed;

(e) the provision of an official seal of the Bank and the manner and effect of its use;

(f) the manner and form in which the balance-sheet of the Bank shal be drawn up, and in which the accounts shall be maintained;

(g) the circumstances in which, and the conditions and limitations subject to which, the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and

(h) generally, for the efficient conduct of the business of the Bank.

Amendments and Repeal.

Amendment of Act III of 1906.

48. In the Indian Coinage Act, 1906, *the following amendments shall be made, namely* :—

(1) *After section 3 the following section shall be inserted, namely* :—

The Mohur.

3A. (1) *A gold coin, to be called a mohur, shall be coined at the Mint in such quantity as the Governor General in Council may direct.*

(2) *The standard weight of the mohur shall be 188.346 grains troy, and its standard fineness shall be nine-tenths of fine gold and one-tenth of alloy* :

Provided that, in the making of the coin, a remedy shall be allowed not exceeding two-thousandths in weight and two-thousandths in fineness."

(2) *In clause (a) of sub-section (1) of section 10, after the words "referred to in" the words "sub-section (1) of section 3A and" shall be inserted.*

(3) *For section 11 the following sections shall be substituted, namely* :—

Sovereigns and half-sovereigns as legal tender.

"11. Gold coins, coined at His Majesty's Royal Mint in England or at any Mint established in pursuance of a proclamation of His Majesty at a branch of His Majesty's Royal Mint, shall be legal tender in British India in payment or on account at the rate of *thirteen and one-third rupees for one sovereign* :

Provided that such coins have not been called in by any Proclamation made in pursuance of the Coinage Act, 1870, or have not lost weight so as to be of less weight than that for the time being prescribed for like coins by or under the said Statute as the least current weight.

11A. A mohur shall be legal tender in payment or on account :

Mohurs a legal tender.

Provided that the mohur—

(a) has not lost in weight so as to be of less weight than 187.153 grains, and

(b) has not been defaced."

(5) *In sub-section (1) of section 12, after the words "on account" the words "at the rate of twenty rupees for one mohur" shall be inserted.*

(5) *In section 16, for the words "where any silver coin" the words "where any gold or silver coin" shall be substituted.*

(6) *In section 20, for the word "silver", wherever it occurs, the words "gold or" shall be substituted.*

(7) *In sub-section (2) of section 21—*

(a) in clause (a) after the words "allowed by" the words "sub-section (2) of section 3A and" shall be inserted; and

(b) the word "and" *shall be added* at the end

(b) the word "and" *shall be added* at the end of clause *(d)*, and *after that clause the following clause shall be added, namely* :—

"*(e) provide for the acceptance at prescribed rates by officers authorised in this behalf of the gold coins described in section 11 where such coins have lost weight so as to be of less weight than that for the time being prescribed for like coins by or under*

the Coinage Act, 1870, at the least current weight."

Repeals.

49. The Indian Paper Currency Act, 1923, and the Currency Act, 1927, are hereby repealed.

Provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India.

1. The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India and no branch of the Banking Department of the Reserve Bank of India.

2. In consideration of the performance by the Imperial Bank of India on behalf of the Reserve Bank of India of the functions which the Imperial Bank of India was performing on behalf of the Governor General in Council at the places referred to in clause 1 before the coming into force of the Reserve Bank of India Act, 1927, the Reserve Bank of India shall pay to the Imperial Bank of India a commission calculated on the total of the receipts and disbursements dealt with annually on account of Government by the Imperial Bank of India on behalf of the Reserve Bank of India. Such commission shall be one-sixteenth of one per cent. on the first 250 crores of such total and one-thirty-second of one per cent. on the remainder.

3. Subject to the condition that the Imperial Bank of India shall keep open branches not less in number than those existing at the time of the coming into force of the Reserve Bank of India Act, 1927, the Reserve Bank of India shall allow the following balances to the Imperial Bank of India at the interest rates hereinafter specified, namely :—

(*a*) during the first five years *from that time* —3 crores free of interest;

(*b*) during the *next* five years—2 crores free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 1 crore at 2 per cent. per annum;

(*c*) during the next five years—1 crore free of interest and, at the option of the Imperial Bank of India, an amount not exceeding 2 crores at 2 per cent. per annum; and

(*d*) during the *next five* years—at the option of the Imperial Bank of India, an amount not exceeding 3 crores at 2 per cent. per annum.

4. The Imperial Bank of India shall not, without the approval of the Reserve Bank of India, open any branch in subsitution for a branch existing at the time this agreement comes into force.

[*See section 45.*]

RESERVE BANK OF INDIA.

An Account pursuant to the Gold Standard and Reserve Bank of India Act, 1927, for the week ending on the day of .

Issue Department.

CALCULATION OF THE REMUNERATION PAYABLE TO THE IMPERIAL BANK OF INDIA UNDER THE SECOND SCHEDULE TO THE GOLD STANDARD AND RESERVE BANK OF INDIA BILL, 1927.

Clause (2).—The aggregate amount of the total receipts and disbursements dealt with on account of Government by the Imperial Bank of India at its branches (excluding Calcutta, Bombay and Madras) for the two last half years available covering both the slack and busy seasons was Rs. 328 crores. The amount of commission that would be payable to the Imperial Bank under this clause is therefore estimated at about Rs. 18 lakhs. So long as the number of branches remains unchanged and all Government transactions are put through them, the proportion of the total transactions of the Bank to the total Government transactions would naturally tend to remain practically the same and so would the amount of the commission payable to the Bank.

Clause (3).—The value of a free balance of Rs. 1 crore over the 5 years 1921-25, on the basis of employment in India at the bank rate during the period when Government balance was being utilised, and employment in London at 4 per cent. per annum during the period when Government balance was not being utilised, has been worked out by the Imperial Bank, and the result is an average earning power of 5.4 per cent. It would not, however, be possible to keep such balance fully employed and allowing for periods of non-employment, time lost in transit and in making investiments, a better average return than 4 per cent. per annum is improbable. The value of the free balances to the Bank under this clause will, therefore, be Rs. 12 lakhs during the first five years, 10 lakhs during the second five years, 8 lakhs during the third 5 years and 6 lakhs during the last 10 years.

2. Excluding the remuneration proposed to be given to the Imperial Bank under clause (5) for opening new branches—on terms which do not appear to be unduly generous—the arrangement proposed in Schedule II would give to the Imperial Bank :—

	Rs. in lakhs.
(1) Commission on the Government business in the mofussil ...	18
(2) Value of free balances	12
Total ...	30

The Bank would thus under the agreement obtain a benefit of Rs. 30 lakhs per annum during the first 5 years of the agreement which will be reduced to Rs. 28 lakhs in the second 5 years, 26 lakhs in the third 5 years and 24 during the last 10 years.

3. The Imperial Bank *now* obtains from Government the following direct or indirect remuneration :—

	Rs. in lakhs.
(1) Profit on the administration of the public debt	2.81
(2) Interest on Government balance at Bank rate (quinquennial average) ...	32.91
Total ...	35.72

The value of Government balance to the Bank has been worked out on the basis that at times when the Bank's cash balances, less the balance of Government account, exceeded 15 per cent. of the Bank's total liabilities to the public (other deposits), Government balances were not being utilised, but that at times when the Bank's cash balance so diminished was less than 15 per cent., Government balances were being utilised to the extent of the difference. It is also assumed that the Bank rate was earned on the balances so utilised. The amount of interest earned on Government balances since the inception of the Bank on this basis works out as follows :—

	Rs. in lakhs.
1921	1.74
1922	17.13
1923	32.80
1924	69.66
1925	43.24
1926 (January to June) ...	7.61
Quinquennial average ...	32.91

4. The remuneration which the Imperial Bank now obtained from Government is as shown below just sufficient to compensate the Bank (1) for the cost of conducting the Government business in the mofussil and (2) for the loss in its work of development of branch banking in India. The cost of maintaining Government account at all branches is, according to the statement furnished by the Imperial Bank, Rs. 16.75 lakhs per annum. The aggregate loss for the two past half years suffered by the Imperial Bank on account of the opening of the 100 branches in conformity with its agreement with Government is Rs. 16.20 lakhs, making a total on account of two items (1) conducting Government business and (2) developing branch banking, of Rs. 32.95 lakhs.

5. It is reported by the Imperial Bank that of the 107 new branches and pay offices opened by them, 26 are on a paying basis, 18 are expected to be on a paying basis by 1931, 32 may possibly be on a paying basis by 1931, and 31 are unlikely ever to pay their way.

It is, of course, impossible to forecast the future of these branches and it is probable that the net loss at the end of 25 years may be considerably reduced. It must be remembered that in the absence of some agreement of the nature given in this Schedule, the Imperial Bank would obviously close down all the branches except those which might be making a reasonable profit and would, therefore, be in a position to make a definite profit on the remaining branches. The remuneration therefore must do some thing more than cover the net loss of the Bank over the whole period.

GOVERNMENT'S MEMORANDUM ON REMITTANCES

1. The Reserve Bank shall effect such transfers as may be required between the account of the Government of India in India and the accounts in London of the Secretary of State and the High Commissioner.

2. Transfers to London shall be made on the demand of the Secretary of State in Council or the High Commissioner, who shall on Friday in each week notify the Bank of the amounts required to be placed to the credit of their respective accounts on each day of the succeeding week, and shall at the same time advise the Government of India by telegram of the ammounts so demanded.

Note.—The Secretary of State in Council and the High Commissioner will regulate their remittance programme with a view to restricting their balance so supplied to an amount not materially in excess of current requirements on capital and revenue account.

3. The rupee amounts corresponding to the transfers referred to in 2 above shall be debited to the account of the Government of India in India on the day on which the sums are credited to the accounts of the Secretary of State or the High Commissioner and shall be calculated at the selling rate of the day for Telegraphic Transfers in Bombay. In the event of any fluctuation during the day, the rate shall be fixed by agreement between the Governor of the Bank and such officer of Government as the Government of India may appoint.

4. The following information shall be supplied to the Bank :—

(*a*) Before the end of December in each year the Government of India shall furnish a preliminary estimate of the probable sterling requirements for the next financial year, showing the probable amount of the drawings in each month.

(*b*) Before the end of March the Government of India shall furnish a revised estimate as above.

(*c*) Seven days before the end of each month the Secretary of State and the High Commissioner shall send to the London Office of the Bank statements showing their probable drawings during each of the next three months, noting the days on which net disbursements are likely to be heavy and the probable amount of such disbursements.

The Bank shall be given the earliest possible intimation of any substantial change in the estimates furnished as above.

5. In regard to all matters connected with the remittance programme, the Government and the Bank shall maintain close and continuous contact, and due regard shall be paid by Government to any representations made by the Bank regarding the reaction of the programme of the exchange and money market.

MEMORANDUM ON RELATIONS BETWEEN CO-OPERATIVE BANKING AND THE PROPOSED RESERVE BANK

1. **Summary of Organisation.**—At the outset a brief statement of the organisation of the Co-operative movement in India, taken from the **Times of India** "Indian Year Book" 1927, may be given.

The basis of the movement is the primary credit society either of the agricultural or non-agricultural type which consists of a minimum number of persons and is registered and controlled under the regulations of the Co-operative Societies Act. The main business of the Credit Society is to raise funds by deposits from members and loans from non-members, Government and other co-operative societies, and to distribute the money thus obtained in loans to members or, with the special permission of the Registrar, to other co-operative credit societies.

Agricultural Societies.—As regards agricultural societies the commonest type is that prevailing in the Punjab, Burma and the United Provinces, **i.e.**, a society of unlimited liability with a small fee for membership and a share capital, the share payments to be made in annual instalments. In some places compulsory deposits are required before full membership can be attained. The system in Bombay and parts of the Central Provinces is different, there being no share capital and only an admission fee.

Part of the working capital of agricultural societies is raised by deposits from members and local friends of the movement, but the bulk of the capital is obtained by loans from central and other co-operative societies. According to the latest available figures out of the total working capital 2¾ crores were shares, 2 4/5 crores reserves, 12 crores deposits of members, 1¼ crores deposits from non-members and 15 crores were loans from central societies.

2. **Non-agricultural societies.**—The non-agricultural societies have grown up in cities and towns for the improvement of the economic position of artisans, small traders, members of particular castes, employees of large firms and Government departments. These societies are usually of limited liability with substantial share capital, payments being made in monthly instalments, while the rest of the working capital is obtained from local deposits from members and others. Loans from co-operative banks and societies form only a small portion of the capital. On 31st March 1925 it is stated that out of a total working capital of over 7 crores only 72 lakhs were held from central banks. To this class belong a few societies organised as Peoples' Banks mainly in Bombay and Burma. The larger banks open current accounts, grant cash credits and overdrafts and discount local bills of exchange. Some of the larger non-agricultural societies after meeting the needs of their members have large balances which they advance to the smaller societies, but this practice is being discouraged and the surpluses of primary societies are generally concentrated in the central banks.

3. **Financing of Societies.**—At an early stage the necessity for central organisations to control and co-ordinate the financing of societies was realised and central co-operative banks have been created controlling the societies generally in areas corresponding to revenue districts but also operating in smaller areas where the movement is intensive in character. The constitution of the centarl banks is not uniform but they are generally of two main types (1) banks of which the membership is confined to societies and (2) banks which include socieites and individuals as their members and secure to societies separate representation on the Board of Directors. Further, in all Provinces, except the United Provinces, and also in the States of Mysore and Hyderabad there are Apex or Provincial Banks generally with the Central Banks as shareholders or affiliated to the Provincial Banks, but there is no uniformity in the constitution of the shareholders and directorate of the various banks. The Provincial Banks are the mainstay of co-operative finance and the main advisory and supervising authorities in financial operations. Their business is mainly the attraction of deposits other than those available to central banks, the rediscount of co-operative paper and the regulation of funds between central banks. They thus co-ordinate the financing of the central banks which in turn finance the primary societies. According to the returns for 1924-25 the following was the position of the movement in that year:—

Central Societies (including Provincial and Central Banks and Banking Unions)	555
Supervising and Guaranteeing Unions	1,340
Agricultural Societies	64,281
Non-agricultural Societies ...	5,432

Of the central and provincial banks, 10 had a capital and reserves of 5 lakhs and over, while 104 had capital and reserves between one lakh and 5 lakhs.

4. The External Capital Committee drew attention to the very important part played by co-operative societies in the provision of credit facilities throughout India, a part which is certain to become more influential in the future. In this connection a passage may be quoted from the evidence given to the Committee by the Bihar and Orissa Provincial Co-operative Bank:—

"If the progress of co-operative credit is to be more rapid, and if the financial requirements are to be adequately met, stronger central financing institutions will be required than those that exist at present in some of the Provinces as Apex Banks. In the matter of financial resources, all Provinces are not equally fortunate and while in a large number of the Provinces it is found that there is no outlet for the accumulated funds, in others it is equally evident that the progress of the credit movement will be retarded for lack of funds at the Apex, unless direct Government aid is granted. The latter method is admittedly, not desirable, and the Joint Stock Banks or the Imperial Bank cannot provide the necessary long term capital required. Such banks, however, have always willingly lent their support to co-operative banks on their own terms especially regarding the period. This difficulty was foreseen by the Committee on Co-operation in India in the year 1914 and now, due to the substantial progress made by the movement, it is necessary to review the financial structure of co-operative credit and to examine the necessity of either an Imperial Board of co-operation to co-ordinate the working of the movement and to facilitate the supply of funds **plus** Provincial Banks to **minus** Provincial Banks or the organization of a strong central institution for the finance of the whole movement in India by the amalgamation of the existing Provincial Banks."

5. It may be relevant at this stage to indicate briefly how co-operative banking is related to the Central Banks (corresponding to the Reserve Bank) in other countries. Broadly speaking, the national co-operative unit is most frequently an Apex Bank **which is part of the movement** and is frequently aided by the State or given some form of guarantee,

e.g.,- of its debentures. In Italy the National Institute of credit performs this function while the great Banks of Naples and Sicily assist co-operative banking in return for special privileges from the State. In France, according to Wolff on "Co-operative Banking" it was realised that the Bank of France could not provide credit directly for agriculture, because agriculture could not take up three months' paper but required advances for terms much longer than fitted in with the business usages of a central bank like the Bank of France. Therefore, under its charter of 1899, it had to hand over every year a portion of its net profits to the Minister of Agriculture to be employed at his discretion in support of agricultural credit generally by making advances on easy terms to the local central societies. The system is said not to work well. Probably the best instance for present purposes is the case of the National Bank of Egypt which was founded in 1898 to take over the note issue and the Government balances and was intended to make advances to agricultural institutions. Subsequently it was realised that the latter operations were not part of the functions of a great Central Bank of the State and a separate Agricultural Bank was organised to undertake this business. General experience therefore appears to show that the Apex Bank of a co-operative system ought to be a separate bank which is part of the co-operative movement and exists solely for co-operative finance.

6. **Relations of the Imperial Bank to Co-operative Banking.**—The Imperial Bank now grants facilities on a considerable scale to co-operative banks on the security of promissory notes of primary societies and is always ready to consider any definite proposals for extension of these facilities which may be advanced by the Registrars. In granting these facilities, the Bank has to keep before it the advisability of discouraging the use of its credit to replace deposits the accumulation of which is one of the main objects of co-operative credit banking. The general lines on which the Bank works are:—

(1) All promissory notes of co-operative credit societies or central co-operative banks require to be scrutinised and approved by the Registrar before being handed to the Bank as securities.

(2) The banks to which advances are made are required to give an undertaking that all promissory notes held by the Imperial Bank as security are covered by actual advances made to societies or central banks.

(3) A margin of 20 per cent. calculated on the actual advances given on the promissory notes by the provincial banks to the co-operative societies or central banks has to be maintained.

(4) Before granting advances, the balance-sheets of the central banks concerned have to be submitted for scrutiny.

(5) Advances are purely seasonal in their nature for crop purposes only and for a period not exceeding 6 months.

In addition societies have the concession of Remittance Transfer at par without commission up to certain limits.

The following statement shows the credits from the Bank outstanding in June 1927 in lakhs of rupees:—

IMPERIAL BANK OF INDIA.

ADVANCES TO CO-OPERATIVE BANKS.

June 1927.

Province	Limit of Credit against Government and other Authorised Securities, etc.	Limit of Credit against the borrowers D.P. Notes and D.P. Notes and Rural Credit Societies.	Total.
	Rs.	Rs.	Rs.
Bengal ...	37,73,900	6,06,000	43,79,900
Bombay ...	83,000	8,00,000	8,83,000
Bihar and Orissa	...	8,00,000	8,00,000
Burma ...	34,20,500	1,00,000	35,20,500
Central Provinces ...	9,05,800	4,60,000	13,05,800
Delhi ...	2,07,000	...	2,07,000
Kashmir ...	...	...	...
Madras ...	14,50,000	54,31,000	65,81,000
Punjab ...	38,96,000	21,15,000	60,11,000
United Provinces ...	...	...	...
Total ...	137,36,200	103,12,000	236,88,200

7. **Co-operative Bankinpg and the Reserve Bank Bill.**—The opinions received on the Bill from Co-operative institutions indicate a strong desire that the more important co-operative banks should be included in the Schedule as members of the Reserve system, but this desire is generally accompanied by a stipulation that such Banks should be freed from the necessity of keeping balances with the Reserve Bank under section 41 of the Bill, **i.e.**, they desire to have the privileges of Scheduled Banks without the responsibilities. This question of including co-operative banks in the Schedule was considered when the Bill was first drafted, but it was felt that co-operative banks from the nature of their business and their comparatively small resources would not be able to keep funds locked up with the Reserve Bank.

8. The Finance Department have since consulted certain expert officers with wide experience of the co-operative movement.

The first question which arises is that of representation of the co-operative movement on the Board of Directors of the Reserve Bank. This is desirable for two reasons, firstly, because of the importance of the co-operative movement in stimulating habits of thrift and because it is by the development of co-operative banking that banking needs will be satisfied in places remote from the main centres of trade and industry and, secondly, because the co-operative movement is allied to the development of India's most important industry, agriculture.

It has been suggested that the provincial co-operative banks should be organised to provide the necessary representation of co-operation and agriculture on the Board of the Reserve Bank, but this proposal is strongly opposed to expert opinion which holds that these Banks tend to represent the urban side of the movement and their Directors are not always closely conversant with the interests of the agricultural classes. Urban interests will already be represented fully on the Board by other means and it

is undesirable to add to this representation through the medium of co-operative banks. In the alternative it has been suggested that the representation of co-operation might be secured through an organisation of the provincial co-operative unions or institutes which are central organising bodies more representative of the movement than the Banks. There is, however, no uniformity in their constitution and activities in the various provinces and there is no influential central organisation in the largest agricultural province in India, e.g., the United Provinces. The constitution and purposes of these central organisations vary from Province to Province. In Bombay, there is a central co-operative institute with a representative constitution. In the Punjab, there is a provincial union with 125 central institutions affiliated to it. In Madras, there is also a union for propaganda whose chief activity is the publication of a bulletin. In Bengal, there is an organisation society for propaganda. In Burma, there is a Council designed to be of representative character, but, owing to lack of funds, it is said not to be functioning properly. In Bihar and Orissa, there is a Co-operative Federation to which societies are affiliated. It employs auditors to audit the accounts of the societies and does propaganda work. In the Central Provinces, there are separate organisations in different areas and the central Co-operative Federation is said to be moribund. In Assam, there is an organisation for the Surma Valley area and an Advisory Board for Department. In the United Provinces, there is only a Standing Committee of Co-operators.

In view of the diversity of their constitution and purposes it is manifest that these bodies could not be suitably organised to provide satisfactory representation for the movement, and the only satisfactory solution left for representation of co-operation and agriculture appears to lie in the nomination by the Governor General in Council with the advice of Provincial Governments of individuals who have played an outstanding part in the development of co-operation and agriculture in India. It is considered to represent these activities.

9. As regards the proposed business of the Reserve Bank, Co-operative Banks are interested in—

(*a*) Clause 14-2 (*b*), *i.e.*, purchase, sale and rediscount of Bills of Exchange and promissory notes drawn and issued for the purpose of financing seasonal agricultural operations or the marketing of crops.

(*b*) Clause 14-4 (*a*), the making of loans and advances against the security of stocks, funds and securities.

(*c*) 14-4 (*e*), Advances against promissory notes of banks supported by documents giving title to goods.

It has already been shewn that the Imperial Bank grants extensive facilities to Co-operative Banking institutions and is prepared to take any reasonable steps to extend these facilities. There is no reason to believe that the Bank will not continue to work on the same lines under the new conditions when the Reserve Bank comes into force, as during the course of the last few years the business has developed considerably and is now a source of profit to the Imperial Bank. If so, there will be no necessity for the Reserve Bank to deal directly with Co-operative Banks. There is, however, some evidence of apprehension that when the Imperial Bank attains a larger measure of independence, its terms may become less reasonable than at present or it may desire to discard this form of business. It is stated that other banks can seldom assist with terms which are profitable to co-operative institutions. It would be possible to provide in the terms to be given to the Imperial Bank that it would continue to finance Co-operative Banks as at present, but there is such force in the suggestion that the Reserve Bank should be given power to deal with Co-operative Central Banks if the Imperial Bank does not continue to offer reasonable terms. The Reserve Bank should be able to advance direct to the provincial co-operative banks against Government securities and should rediscount bills bearing their signatures. A provision of this kind would put the Co-operative Banks in a stronger position than at present as it might enable them to get better terms from the Imperial Bank.

10. If this view is accepted it would be necessary to provide—

(**a**) for a definition of "Co-operative Central Banks" and "provincial co-operative banks" and

(**b**) for inclusion in 14-2 (**b**) of provincial co-operative banks as a class of banks whose signatures on a bill will be accepted for rediscount, etc.

Expert opinion holds that, if provision is thus made, the facilities offered by the Bill will be sufficient. No useful purpose would be served by extending clause 14 (4) (**e**) to Co-operative Banks and thus allowing advances to be made against promissory notes. In the first place, advances would be limited to 90 days while the vast bulk of loans required by Agricultural Co-operative Societies are wanted at seed time and cannot be repaid till after the harvest, i.e., a period of 6-7 months. Further, such loans are normally advanced on personal credit with sureties or mortgages and it is rare for societies to be in a position to supplement their pro-notes with documents giving title to goods hypothecated to them. The basis of the Co-operative movement is the honesty, character and credit of the individual cultivator and any provision which substitutes hypothecation of goods for this security is opposed to the fundamental principles of the movement.

11. Further suggestions have been made that the period of 6 months in 14-2 (**b**) should be extended to nine months so far as co-operative bills are concerned in order to meet the longer period required for agricultural credit.

As regards the proposal to add debentures issued by land mortgage and co-operative banks to the category of securities which the Reserve Bank may negotiate, it is held to be undesirable that any such debentures should be accepted unless they are also trust securities as in the case of the debentures of the Bombay Central Co-operative Bank.

A. F. L. BRAYNE.

18th July, 1927.

MEMORANDUM ON THE EFFECT ON THE BUDGET OF CLAUSE 40 OF THE BILL

The following statement showing the effect of clause 40 of the Bill on the Budget of the Government of India has been prepared on the lines of a similar statement which was prepared at the instance of the Members of the Royal Commission.

2. The net profit of the Paper Currency Department and the Gold Standard Reserve on the basis of the 1927-28 Budget are—

	(In Lakhs of Rs.)
Paper Currency Reserve ...	2,29
Gold Standard Reserve ...	2,17
	4,46
Less charges of Currency Department	52
	3,94

3. For purposes of the estimate of the effect of the building up of the Reserve Fund at the rate which has been provided for in clause 40 of the Bill, we may take the net annual profits of the Bank as follows:—

	(In Lakhs of Rs.)
Net profits at present	3,94
Add investment of reserve balances, etc.	70
Deduct payments to Imperial Bank ...	18
Extra establishment of Reserve Bank	10
Net profit ...	4,36

4. The following statement gives the distribution of the above profit between Government and the Bank:—

		(In Lakhs of Rs.) Government.	Bank.
I year	... ...	2,18	2,18
II ,,	... ...	3,67	69
III ,,	... ...	3,86	50
IV ,,	... ...	3,86	50
V ,,	... ...	3,86	50
VI ,,	... ...	3,86	50
VII ,,	... ...	4,23	13
			5,00

5. The loss to the Revenue Budget works out as follows:—

...	(In Lakhs of Rs.) (–means gain).
I year	1,76
II ,, ...	27
III ,, ...	8
IV ,, ...	8
V ,, ...	8
VI ,, ...	8
VII ,, ...	–29

6. The amount earmarked out of the surplus of 1926-27 for meeting the temporary deficit due to the utilisation of the profits for strengthening the Reserve Fund as recommended by the Commission is about 1 crore. The anticipated deficit in the next few years is not likely to involve additional taxation or embarrass the extinction of Provincial Contributions.

MEMORANDUM ON THE PRACTICABILITY OF A GOLD CURRENCY FOR INDIA

The standard of value which the Gold Standard and Reserve Bank Bill establishes for India is a gold rupee of 8.47512 grains. Under the plan proposed, there will be no gold coin in India representing that standard nor any gold coin of any kind in circulation. The silver rupee will remain as at present unlimited legal tender and Reserve Bank notes will also be unlimited legal tender. The standard will be a national gold rupee just as, *e.g.*, in Germany the standard is a national gold mark. The legal tender media of circulation will be kept stable in relation to gold by the operation of the law requiring the Currency Authority to buy gold and to give gold bullion in exchange for legal tender (gold exchange up to 1st January, 1931 and gold bullion thereafter) subject to specified conditions.

2. It is objected that the notional gold rupee is an abstract idea which the average mortal finds extreme difficulty in assimilating or in dissociating from the silver rupee which connotes a silver standard and does not, by its recent history, give him any kind of confidence in its future stability in terms of gold. It is claimed that India ought to have a visible symbol of the gold standard and of her admission among gold standard countries, and that this might be done fairly simply by giving India a new standard of value and a new unit of account, *e.g.*, a 10 rupee gold mohur containing 84.7512 grains of gold. It is urged that this change, though striking in form, would involve no modification of substance in the Government's proposals so long as the discretion as to the amount of gold mohurs to be coined and put into circulation is vested entirely in the Government.

3. Such a change would give India a gold coin as her standard of value. But it would not necessarily result in any gold coins being minted and put into circulation either immediately or at any future date, seeing that the Government would have complete discretion whether or not to coin gold mohurs. Some of the advocates of a gold currency, therefore, go further and demand that either at once or after a certain date, the Indian mints should be opened to the coinage of gold brought to them by the public, and that an obligation should be put upon the Currency Authority to redeem rupees and notes in gold coins on demand.

4. The question to which an answer is demanded is the question why India should not have a gold currency in circulation either—

(*a*) in the form of gold mohurs minted by the Government and put into circulation at its discretion, or

(*b*) in the form of sovereigns and half sovereigns which would be legal tender though not minted in India, or

(*c*) in the form of gold mohurs minted by the Indian mints from gold brought to them by the public.

5. As is well known, there are strong arguments for the view that a gold currency in circulation in any form is a useless extravagance and that the gold bullion standard with no gold coins in circulation in any form is preferable to a gold currency standard. It is not open to question that the trend of currency development in western countries since the War has, for the time being at least, been away from the use of a gold coin in circulation. It is not proposed, however, in this note to develop the arguments for and against the adoption of a gold currency standard. The question whether a gold coin in circulation is practicable in India will be examined entirely apart from the question whether it is desirable.

6. There is one major difficulty in the way of any proposal to give India a full value gold coin in circulation. So long as conditions in India are not radically changed from those which at present exist, a full value gold coin will not in practice remain in circulation for the ordinary purposes of monetary transactions but will inevitably be withdrawn from circulation for the purpose of being melted down or hoarded, that is, locked up for indefinite periods as a store of value. So long as the social customs and habits of the people are not radically modified, there must always be in India a very large demand for the precious metals for non-monetary purposes. If, therefore, now or at any date in the immediately foreseeable future the Currency Authority were to issue a full value gold coin, say, a 20 rupee gold-mohur containing 169.5024 grains of gold, there will always be a demand for this coin for non-monetary purposes which will prevent its circulation as money, because in almost all circumstances the gold mohur would be the cheapest as well as generally speaking, the most convenient form in which gold would be obtainable. The gold required by the goldsmiths for making into gold bangles and ornaments would be obtained by them by melting down gold mohurs. Even if the fact that gold mohurs were freely available in exchange for legal tender and could be freely changed back into legal tender, led to ornaments being made out of strings of gold mohurs instead of out of melted mohurs, the gold mohur would none-the-less cease to function as currency. For the purposes of hoarding, gold coins might tend to be preferred to gold bullion, but even so, they would not function as currency in circulation. If, therefore, gold coins are to function at all as currency, some solution must be found for this major difficulty.

7. The average annual demand for gold for non-monetary purposes in India is not less than 20 to 30 crores of rupees worth, and in some years rises to twice the larger figure or even higher. If gold coins are to function as currency at all, they (or their equivalent in gold bullion) must be available in quantites sufficient to meet the maximum demand for gold for non-monetary purposes in all circumstances with a surplus over to supply the gold coins which are to remain in circulation. It can hardly be doubted that an attempt to supply gold mohurs in such enormous quantities is not a satisfactory solution of the difficulty abovementioned. In the first place, the accumulation of a reserve sufficient to stand up against the maximum demand will obviously be an operation which would have to be spread over a very long period and would be very costly owing to the loss of interest obtained. The reserve would have to be big enough not merely to supply the maximum demand but also to ensure that the minimum amount of gold left in the reserve at any time should be sufficient to maintain undiminished confidence in the stability of the currency. In addition to the heavy cost due to loss of interest there would be a large annual charge to the Currency Authority, that is, to the taxpayer for importing gold. The Currency Authority would get Rs. 20 per mohur for each mohur issued, but the cost of importing the gold would amount to something appreciably more than 20 rupees (approximately Rs. 20-4-8). If, for example, the average amount of mohurs issued yearly were 30 crores of rupees worth of gold mohurs and the average rate of exchange were 1s. 6*d.* per rupee, the loss on importing gold would amount to about 40 lakhs of rupees per annum. A small seignorage charge to cover the cost of minuting would no doubt be fully justified. But if the gold mohur is to be the standard coin and standard of value for India, it would clearly be impossible to charge a seign-

orage to cover the cost of importing gold. The alternative of issuing an overvalued gold mohur is discussed below.

8. The only method by which the Currency Authority could reduce this heavy charge upon the taxpayer would be by attempting to keep exchange always up to the gold import point, say, 1s. 6-3/16*d*. It could not do this successfully, if at all, without keeping bank rate always high and rigidly controlling the supply of legal tender money and of credit in a way that would result in continued stringency in the money market. The cost of the country of such action will be at least as serious as the cost to the taxpayer of the alternative.

9. It is not possible to get over this difficulty by relieving the Currency Authority of the liability to redeem rupees and notes in gold mohurs. It is sometimes suggested that the difficulty could be avoided by simply opening the mints to the coinage of gold mohurs out of gold brought to them by the public, while not putting any obligation upon the Currency Authority to give gold in exchange for legal tender except at the price as proposed in the Gold Standard and Reserve Bank Bill corresponding to the gold export point. Any such attempt would obviously result at once in gold mohurs being permanently at a premium as compared with legal tender with the result that they could not possibly function as currency. On the contrary, it would obviously be necessary to impose on the Currency Authority an obligation to sell gold in exchange for legal tender at par not only in the form of gold mohurs but also in the form of bullion, in order to avoid the absurdity and the cost of continually minting gold into coins to be melted down as soon as they were issued.

10. There is a theoretical alternative method for surmounting the major difficulty referred to above, namely, the issue of an over-valued gold mohur. For example, if instead of coining a gold mohur of Rs. 20 containing $20 \times 8.47512 = 169.5024$ grains of gold, the Government were to mint a gold mohur containing only 165½ grains, such a coin could be issued to the public as the equivalent of 20 rupees, if the public would accept it as such, without any loss to the taxpayer, since the difference of 4 grains of gold between the monetary value and the gold value of the coin would be sufficient to meet the cost of importing the gold and minting it into coin, even if exchange were at the export gold point at the moment of import of the gold. The charge of about 4 grains of gold per mohur would be regarded as a seignorage charge, and its theoretical justification would be exactly the same as the justification given in Schedule I to the Currency Commission's Report for the selling rate of Rs. 21-11-9 per tola for gold for delivery in Bombay under the plan for a gold bullion standard proposed by them and adopted in the Government's Gold Standard and Reserve Bank Bill.

11. A gold mohur of 165½ grains might well remain in circulation as legal tender for 20 rupees. It would not tempt the goldsmiths who would in normal circumstances be able to get a slightly larger amount of gold for melting by buying gold bullion in the market for 20 rupees. Such a coin might still be used for hoarding as being more convenient and more easy to convert back into money than gold bullion, but the hoarder would generally prefer to keep his hoard in bullion or in sovereigns as these would represent full value in gold, and whenever exchange was above the gold export point, he could purchase rather more than 165½ grains of gold for 20 rupees.

12. If therefore the demand for a gold coin in circulation is simply a demand for the convenience of having such a coin in circulation, this method offers a means of meeting it, and when the time arrives and India's gold reserves are strong enough to be able to spare gold for circulation as currency the plan of a gold mohur of 165½ grains will be worthy of careful consideration provided that those who desire a gold currency still desire it and are satisfied that the public want and will accept such a coin. It must however be made clear that a 20 rupee gold mohur of 165½ grains cannot become the standard of value for India. That standard of value would still have to be the notional gold rupee of 8.47512 grains. The 20 rupee gold mohur would simply be an additional and possibly a very convenient form of unlimited legal tender. Further, in times of contraction of currency, gold mohurs of 165½ grains coming back from circulation into the Currency Reserve would not be entirely satisfactory from the standpoint of the Currency Authority, since they would not be convertible into 20 rupees worth of gold bullion for purposes of export. If held in the Currency Reserve, as they doubtless would be at times, they would always leave, if valued at 20 rupees, a small margin of the liability for outstanding notes and rupees uncovered by gold. A fiduciary element corresponding to the fiduciary element in the silver rupee, though trifling in amount by comparison, would still remain in the gold mohur of 165½ grains. In other words, the standard would still be a gold bullion standard and the gold mohur of 165½ grains would still be, to a small extent, a token coin, not a full value gold goin, and this solution of the difficulty though worthy of full consideration does not meet the demand in so far as it is a demand for a full value gold coin.

13. In so far therefore as the demand for a gold currency standard is a demand for a full value gold coin in effective circulation, it appears that the only possible answer to the demand is that it is frankly impracticable in the immediate future. How long this condition of affairs will remain cannot be forecasted. The chief hope of reducing the demand for gold in India for non-monetary purposes lies in the development of the habits of banking and investment. It is no doubt the view of many competent judges that once India has a full value gold coin freely available to her, she will be far more ready than at present to make use of gold productively, and will bring large quantities of gold out of hoards for use as money. But even if this claim is granted, the process of bringing gold out of hoards must clearly be a slow one and it is certain that, quite apart from the demand for gold for hoards, the demand for gold for melting down into ornaments will remain very large. So long as this is the case any attempt to put a full value gold coin into circulation involves the import by the Currency Authority at the expense of the taxpayer of large quantities of gold which will immediately be taken out of circulation and melted down. The double cost of keeping up the gold reserves to the figure necessary for meeting this non-monetary demand and of continually importing gold for issue at a loss remains a formidable obstacle.

14. It is not clear how far those who look to a gold currency as a means to bring gold out of hoards would regard the plan of issuing a 20 rupee gold mohur of 165½ grains as satisfying their condition. As has been shown, such a gold coin might become an effective part of the circulation and once the necessary gold reserves have been built up, a gold currency would be a practicab e proposition. If, however, it is upon the ready availability of full value gold coins as currency that the rapid development of the banking and investment habits depends, a larger reserve and a longer delay will be necessary though it will no doubt still be desirable to introduce a full value gold coin as soon as may be. But it is in any case evident that the gold reserves required either for the purpose of an overvalued gold coin or for that of a full value gold coin are not at present in the possession of the Currency Authority, and the first step to take is therefore in any event to set to work to build them up quickly. This is what is proposed by the Government in the Gold Standard and Reserve Bank Bill, and a strong argument is thus offered for the gold bullion standard. It is unnecessary for the present to arrive at a final decision on the question

whether, if the introduction of a gold currency is ultimately held to be desirable for India, the gold coin to be minted should be a full value one or a slightly overvalued one. This decision may well be deferred till the gold bullion standard has been in operation for some time and the gold reserves have accumulated and further experience has been gained of the extent to which the banking and investment habits have been developed. Nothing is gained and something is lost by attempting to arrive at a decision on this point now.

15. If the reasoning of this memorandum is correct, the answer to the third part of the question in paragraph 4 may now be given. It is impracticable to secure for India a gold currency in circulation for some long time to come by opening the mints to the coinage of a full value gold in exchange for gold brought to them by the public. It might be possible at an earlier date to put into and keep in effective circulation a slightly overvalued gold coin by opening the mints to the coinage of such gold coins from gold brought to them by the public. But the first step in any event is to adopt the gold bullion standard and build up the gold reserve, since all the available gold is required for the present inside the reserve, and postponement of the choice between the full value and the overvalued gold mohur will enable the decision to be taken, if and when desired, in the light of fuller experience.

16. The answer to the first part of the question in paragraph 4 is contained in the answer to the third part. It would of course be possible to legislate at once for the minting of a gold coin which the Government would be under no obligation to mint for the present in any but the smallest quantities—a few specimens only. This would not however give India a gold currency in circulation and, besides requiring an immediate decision on the controversial question whether a gold coin is ultimately desirable, involves a premature choice between the alternatives of a full value and a slightly overvalued coin in favour of the former thus actually postponing the date at which it may eventually be possible to have a gold coin in effective circulation in India.

17. The second part of the question in paragraph 4 relates to the use of sovereigns and half sovereigns as legal tender in India. The objections to this course are partly but not entirely the same as those to the other two courses. Even though demonetised, sovereigns can of course be freely imported into India and will continue to be so imported, but they will not function as currency. Monetisation, however, will not make them function as currency under the Gold Bullion Standard for exactly the same reasons which would prevent a full value gold mohur from functioning as currency, viz., the fact that they would in normal circumstances be worth more as bullion than as money and would consequently command a premium over other forms of legal tender. There is however a further objection to monetisation of the sovereign under the Gold Bullion Standard. Just as the presence in hoards of a large quantity of silver rupees which are unlimited legal tender and may at any time come back into circulation complicates the task of the currency Authority in controlling the supply of currency and weakens its effectiveness, so would the presence of large quantities of sovereigns which are legal tender but are not, save in exceptional circumstances, functioning as part of the medium of circulation impair the power of the Currency Authority and the efficiency of its action. It is desirable to avoid a drain on the gold assets in the reserves and still more a demand for gold from the Currency Authority even at the higher of the two prices fixed by the Gold Standard and Reserve Bank Bill not in the circumstances envisaged by the Bill when it is really required to support the exchange value of the rupee, but simply for the purpose of facilitating the import of sovereigns into India. Gold can be freely minted into sovereigns in South Africa on the demand of the public (this being possible there because South Africa is a regular exporter of gold) and in certain circumstances it is conceivable that large quantities of sovereigns would be imported into India with serious reactions on the efforts of the Currency Authority to maintain ample reserves to secure the stability of the exchanges. In fine, the monetisation of the sovereign, while not giving India a gold currency in effective circulation, is fraught with many dangers for the working of the Gold Bullion Standard, and must inevitably retard the building up of the Gold Reserves and the arrival of the day when India will be in a position, if she so desires, to decide for a Gold Currency in effective circulation.

18. It may be useful before this memorandum is closed to consider in rather greater detail two points which have been mentioned more or less casually hitherto, the cost involved in the introduction of a gold currency, and the necessity for allowing a fair interval of time for the building up of the gold reserves. The last point may be taken first. The objection that an attempt by India to convert her sterling securities into gold forthwith would damage the monetary interests of Great Britain or of the Western World in general is often misunderstood. India has not at present the resources required to make it certain that she could obtain the necessary quantities of gold which will be needed to make her gold reserves amply secure against all emergencies if she embarked on the policy of introducing a gold currency standard without delay and would therefore have to make sure of being able to borrow in England or in the United States of America in case of necessity. It is therefore essential to the success of the attempt that she should retain sufficient good-will in London and New York to make them willing to lend. The enquiries of the Currency Commission have made it clear that neither London nor New York are ready to promise unqualified assistance on this matter. But it does not follow that these monetary centres are sacrificing India to their own selfish interests. Their attitude is based on the belief that the extra demand upon the gold stocks of the world which India's action would entail would be such as to cause a tremendous dislocation and that, even if worse consequences did not ensue as many believe, threatening the stability of the gold value of every currency in the world, one result would inevitably be a very heavy fall in gold prices everywhere. India would not escape this fall, and the dislocation would be very severe, particularly for India's industrial enterprises. Whatever differences may have arisen over the question of the 1s. 6d. ratio, it is common ground that India does not want a renewed heavy fall in wholesale prices. India is therefore at least as much interested as London and New York in preventing a *cataclysmic fall in gold prices*. And it is well to remember that if London and New York are convinced that a particular course of action by India will have these results, even though their reasoning may conceivably be mistaken or exaggerated, the consequences they fear will probably follow simply because they fear them. It is not therefore a sufficient or complete answer for India to say that the view taken by London and New York is, in India's opinion, an erroneous or exaggerated one.

19. The extent to which India's adoption of a gold currency standard would cause an increased demand upon the world's gold stocks must be a matter of opinion. Certain figures were put before the Currency Commission which gave reasons for holding that even those large estimates were below the mark, or at any rate, below the potential maximum. Those who look for a large return of unproductive gold from hoards in India are entitled to argue that the figures placed before the Currency Commission are an overestimate. It is however inevitable that the first effect of a decision by India to introduce a gold currency must be to cause a considerable extra demand for gold. Even the introduc-

tion of a gold bullion standard means—and has indeed already meant—the gradual conversion of a considerable portion of India's sterling securities into gold. It is pertinent to observe that the recent purchases of gold in London from the Gold Standard Reserve have had the effect of retarding the fall of interest rates in London and keeping Bank rate at 5 per cent. for a little longer than it would otherwise have been there, and that this has reacted on money conditions in India and made it necessary to keep rates up here also. The minimum gold reserves required before a gold currency standard could safely be embarked upon would clearly be very much larger than those required for a gold bullion standard. It has been remarked already that the process of drawing gold out of hoards in India must necessarily be a gradual one, so that the gold obtained from this source for supplementing the existing stock of gold in the world available for monetary purposes would do little in the first few years to diminish the strain. Further, if the newly available gold coins went into hoards to replace silver bullion, silver rupees, or notes, these, together with any gold coins which went into effffective circulation, would all represent a new demand for gold, and at the same time an additional demand on the gold resources of the Currency Authority in India. Finally, time must obviously be allowed to the Currency Authority in India to find a solution for the problems which are raised by the recent large flow of silver rupees into the Currency Reserves accelerated as it would be by the issue of a gold coin. For all these reasons, it is clearly impossible for India to build up her gold reserves otherwise than cautiously and by gradual stages.

20. The question of the cost of a gold currency to India can best be approached if we begin from the cheapest of the theoretically possible alternatives viz., a sterling exchange standard. Under a sterling exchange standard it would be possible to dispense altogether with gold in the reserves, but there are some valid objections to this course, and it will be enough to assume that under such a standard India would have been content to hold and to continue to hold not more than the amount of gold, approximately 30 crores, which she held when the Currency Commission reported. At 4 per cent. the cost of holding 30 crores of gold may be taken to be 1.20 crores per annum. It may further be assumed that the pace at which silver rupees are being displaced from hoards would not be less than it is, had a sterling exchange standard been favoured and that the amount of currency notes in circulation would also be unaffected. It is true that the case for selling surplus rupees in order to obtain gold assets would have been less strong under the sterling exchange standard, but the loss involved in melting down silver rupees is to a certain extent a paper loss, and the expense of carrying large stocks of silver rupees is comparable to the expense of holding gold bullion. In any case the difference in cost of the sterling exchange standard and the gold bullion standard in so far as holding of silver rupees are concerned is not in point in the present connection. With a total circulation of 180 crores of notes and after allowing for 50 crores for the proposed rupee redemption liability the minimum amount of gold required by the provisions of the Gold Standard and Reserve Bank Bill [Section 28 (2)] is 30 crores at the start, one-fifth of 280 crores or 46 crores after 5 years and one-fourth of 230 crores or 57½ crores at the end of 10 years. It is reasonable to allow for a growth of the circulation amounting to 20 crores in the first five years and 30 crores in the next five. The amount of gold required may then be taken as =50 crores after five years and =70 crores after 10 years. The growth of the gold reserve may further be assumed to be taking place at a fairly regular pace throughout the period, say, 4 crores a year. The extra cost of holding these amounts in gold instead of in securities at 4 per cent. is then :—

16 lakhs in the first year.
32 lakhs in the second year.
48 lakhs in the third year.
64 lakhs in the fourth year.
80 lakhs in the fifth year.
96 lakhs in the sixth year.
112 lakhs in the seventh year.
128 lakhs in the eighth year.
144 lakhs in the ninth year.
160 lakhs in the tenth year.

The additional cost thereafter would be 160 lakh a year *plus* something extra representing the cost of keeping a minimum of 25 per cent. in gold against further expansions of circulation. The complications caused by the proposed transfer of the note issue to the Reserve Bank may be ignored. They do not affect the argument.

21. It is a matter of guess work to estimate the minimum gold reserves that would be required to be accumulated before it would be safe to inaugurate a gold currency standard with a full value gold coin in circulation. The figure may perhaps be put at a minimum of 125 crores. In order to secure this, the Currency Authority would have to borrow outside India and special steps would be necessary to dispose of silver rupees. The cost in interest would therefore on the average probably be more than 4 per cent., but taking the same figure of 4 per cent. as before, the gross interest charge works out at 500 lakhs, the extra charge for interest as compared with the sterling exchange standard being 380 lakhs and as compared with the gold bullion standard 220 lakhs. The charge for interest is however not the only extra cost involved by the gold currency standard. Account must be taken of the cost of issuing gold at a loss. It may be assumed that the minting charge will cover the cost of minting, but some further expenditure will be involved in withdrawing light weight coins from circulation. If 30 crores worth of gold a year be taken as the average amount of gold that would be imported by the Currency Authority for issue to the public, the loss involved is, as already stated, approximately 40 lakhs per annum. The annual charge for withdrawing uncurrent coin which might amount to a lakh, may be ignored. Experience in England shows that sovereigns lose on the average 0.026 grains a year in weight and half-sovereigns 0.040 grains. In India the loss would be greater. The extra cost of the gold currency standard, with a full value gold coin, may therefore be estimated at 4.20 crores a year as compared with the sterling exchangs standard and 2.60 crores a year as compared with the gold bullion standard.

22. The cost of adopting the alternative of an overvalued gold mohur of 165⅜ grains would of cours be less than that of a gold currency standard, but more than that of the gold bullion standard. The taxpayer would have to bear the loss of interest on the amount required to provide the gold for such gold coins as remained in circulation. These gold coins would displace an equivalent amount of notes or rupees, but it may be assumed that the deduction in the total liabilities of the Currency Reserve due to the reduction of the total circulation would be at the expense not of the gold holding of the reserve but of its holding of securities. The amount of such gold coins as would remain in circulation may be put at a guess at 25 crores. The extra annual cost to the taxpayer then of this alternative as compared with the gold bullion standard may be put at 1 crore for interest plus something under a lakh for the cost of withdrawing worn coin. This is 2.60 crores per annum more than the sterling exchange standard, and 1.60 crores per annum less than the gold currency standard.

B. P. BLACKETT.

May 1927.

LEADING CENTRAL BANKS

OUTLINES OF CONSTITUTION

(WITH ACKNOWLEDGMENTS TO SIR CECIL KISCH'S BOOK, *"CENTRAL BANKS"*)

UNITED STATES OF AMERICA

Federal Reserve System

Board of Directors of Federal Reserve Banks.

The Board shall administer affairs of Bank fairly and impartially and without discrimination...and shall, subject to provisions of the law and the orders of the Federal Reserve Board, extend to each member bank such discounts, advance and accomodations as may be safely and reasonably made with due regard for the claims and demands of other member banks.

Board to consist of nine members in three classes:

A. Three chosen by, and representative of, stockholding banks.

B. Three at time of election actively engaged in their district in commerce, agriculture or other industry;

C. Three designated by Federal Reserve Board, one of whom to be designated Chairman and Federal Reserve Agent—he must be a person of banking experience.

Senator or representative of Congress to be member of Federal Reserve Board or officer or director of a Federal Reserve Bank.

No director of class B to be connected with a bank as director or official.

No director of class C to be connected with a bank as director, official or stockholder.

A & B directors to be elected by member banks under a prescribed procedure.

Term of office three years.

Federal Reserve Board

Eight members—Secretary of the Treasury and Comptroller of the Currency (ex-officio) and six members appointed by the President with the approval of the Senate not more than one of whom to come from any one Federal Reserve Bank district. In making selection President to have regard to fair representation of financial, agricultural, industrial and commercial interests and geographical divisions of the country. The six members to be full-time officers and to be salaried ($12,000 per annum); term of office ten years. One of the six appointive members to be designated by President as Governor "the active executive officer", and one as Vice-Governor of Federal Reserve Board, Secretary of Treasury to be **ex-officio** Chairman of Board.

The Secretary of the Treasury may assign office in Department of Treasury.

All members of Board to take oath of office.

Expenses of Board to be met from a levy on Federal Reserve Banks in proportion to their capital stock and surplus.

No member of Board to be officer or director or stockholder in a bank.

Secretary of the Treasury and Comptroller of the Currency to be ineligible while in office and for two years after to hold any office in a member bank. This applies also to other members of the Board who resign prior to the expiration of their appointed term.

Board to make annually full report for information of Congress.

ENGLAND

Bank of England

Management.

Under the charter of 1694 a Governor, Deputy-Governor and 24 Directors are to be appointed, of whom at least 13, including the Governor or Deputy-Governor, shall form a Court of Directors for managing the affairs of the Corporation. (A Court is held at least once a week).

The election of Governor, Deputy-Governor and Directors takes place at General Courts. These are held at least twice yearly, and holders of Bank Stock of amount not less than £500 present at the meeting, may give one vote and no more. Term of office of Directors, including Governor and Deputy-Governor, one year. They are eligible for re-election. Members of Court must be natural-born or naturalised British subjects.

FRANCE

Bank of France

Management.

Governor and two Deputy-Governors appointed by President on proposal of Finance Minister. No specified term of office is laid down. The Governor directs all the Bank's business and the importance of his position is emphasised by the law.

The above officials may not be members of Parliament.

General Council to consist of Governor and Deputy-Governor together with fifteen Regents and three Auditors (Censeurs) elected by the General Assembly.

Three of the Regents must be chosen from the Treasury disbursing agents, five of the Regents and the three Auditors from the commercial and industrial members among stockholders, and one Regent from the agricultural members.

Term of office of Regents, 5 years.

Term of office of Auditors, 3 years. Regents and Auditors are eligible for re-election.

The General Council is responsible for the administration of the Bank and the conduct of business.

Discount Council consists of 12 shareholders, elected by the Auditors, and acts in advisory capacity.

General Assembly consists of the 200 largest shareholders, but only French citizens are eligible for membership. Meets regularly once a year at the end of January, but may be summoned specially. Each member has one vote.

Main duties:

(1) To elect Regents and Censors.
(2) To receive annual report of General Council.
(3) To receive Censor's report on balance sheet.

GERMANY

The Reichsbank

Management.

Managing Board to adminster Bank and to direct currency, discount and credit policy.

President and members must be Germans.

President to be elected by General Council, election requiring majority of seven votes and the confirmation of the Reichpresident, who signs the deed of appointment.

The members of the Board (number unspecified) having been approved by General Council (the same majority being required as for President) are appointed by the President—term of appointment 12 years but retirement at 65.

President holds office for 4 years.

President and Members are eligible for reappointment.

On important grounds President or member of Managing Board may be dismissed—former by General Council, subject to majority vote as above, and latter under same condition, but not without President's consent.

General Council.

The General Council is composed of 10 members; these members must be Germans. The President of the Bank is one of the members, and is Chairman of the General Council.

Term of office of members of Council three years, with exception of President.

Members, with exception of President, are elected by means of co-option by those members of the General Council, who are in office at the time, subject to confirmation of the part of such of the shareholders as are German nationals. Before the election the Chairman of the General Council or his deputy shall consult the Government of the Reich concerning the election.

Following classes are ineligible for General Council:

(a) Officials of Reich or any German State unless permanently retired;
(b) Persons who receive any payment from the Reich or a State other than payment for previous services.

Resolutions of General Council require a simple majority; if the votes are equally divided, the Chairman has a casting vote. This provision does not apply to the election of the President, neither does it apply to the assent to be given to the appointment of the members of the Managing Board.

At each meeting at least once in three months General Council shall examine reports and decide on proposals submitted by President.

In order to maintain permanent contact as to currency matters and financial policy, Reichbank Managing Board is obliged to report at regular intervals to the Government or at any time on the request of the Government in regard to these matters.

General Meeting of Shareholders.

The general meeting represents the shareholders. (According to Statutes it must be held at least once a year not later than May).

Each share gives one vote, but no one to have more than 300 votes.

A report on administration is printed annually. General meeting decides as to balance sheet and distribution of profits according to law.

Central Committee of Shareholders.

Central committee of shareholders shall be formed, whose advice Managing Board may obtain, if desired. Members to be elected by General Meeting on proposal of Managing Board from German shareholders representing banking, industry, commerce, agriculture, manual trade and labour.

JAPAN

Bank of Japan

Management.

Art. 17 and B. Art. 41. Administrative Board to consist of one Governor, one Vice-Governor and four Directors. Three to five Auditors to supervise business Management. Also Discount Committee to examine bills to be discounted.

Governor.

Art. 18 and B. Art. 42. Governor to be appointed by Government on Imperial nomination and Vice-Governor with Imperial approved for five years, both being eligible for re-appointment. They are to hold no other official appointments while in office.

Directors and Auditors.

B. Arts 45-46. Directors to be appointed by Finance Minister from twice as many candidates elected by General Meeting of Shareholders. Casual vacancies to be filled by nomination by Finance Minister. Term of office, four years; eligible for reappointment.

B. Art. 50. Auditors to be elected in general meeting of shareholders for three years and are eligible for reappointment.

Art. 19. Directors and auditors may not be officials of other banks or companies.

B. Art. 53. If share of half-yearly profits to be distributed under paragraph 3 of Article 36 exceeds 5000 yen for each Director and 2000 yen for each Auditor, general meeting of shareholders may reduce share to said amounts.

B. Art. 55. If Governor considers decision of Administrative Board improper he may summon General Council of Bank to consult. If he considers a decision adopted by any meeting as contrary to the Act or By-Laws or to the interests of the State he shall suspend decision and report to Government. If no instruction is received from Government within thirty days from the report original decision to be carried out.

B. Art. 58. Administrative Board shall decide all matters relating to Bank, calculate rates of discount and amounts to be applied to discount of bills or notes issued by Government, to loans on pulic bonds and other securities and to purchase of public loan bonds. Execution of decision is subject to approval of Auditors' meeting.

Annual report on operations of Bank to be submitted to shareholders.

B. Art. 61. Auditors shall supervise all operations of Bank and inspect all books. Approval of Auditors' meeting to be obtained to all decisions on matters relating to change in rate of discount, to increase or decrease in amount of loans to be made on Government securities or to the purchase of public loan bonds. But if immediate action is required, rate of discount may be changed by Administrative Board, provided the approval of Auditors' Meeting must be obtained within five days.

B. Art. 62. Auditors' Meeting to be held at least once a month.

General Council.

B. Art. 64. Meeting of Governor, Vice-Governor, Directors and Auditors to be called General Council of the Bank.

B. Art. 65. General Council to meet at least once a month. Determines distribution of profits and amount of bonuses, internal regulations of Bank, establishment and abolition of branches, terms and procedure for receiving deposits for safe keeping. Decision on above four topics cannot be carried into effect unless approved by Finance Minister.

Discount Committee.

B. Art. 67. Discount Committee to consist of three persons appointed by General Council of Bank, to receive fees in proportion to their attendances.

B. Art. 68. Discount Committee to be presided over by one Director to examine all bills submitted for discount.

DENMARK

National Bank of Copenhagen

Management.

Art. 39. The Bank shall be managed by 17 directors and four or five managers according to the determination of the directors and managers.

Art. 40. The Directors and managers shall take an oath that they will administer their offices with faithfulness and zeal in strict accordance with the regulations.

Directors.

Art. 41. The directors shall be elected by the general meeting of the shareholders from amongst the shareholders entitled to vote.

The three directors who have been longest in office shall resign every year and shall be eligible for re-election.

By an amendment of 1919, on the resolution of the management the board of directors is increased by two members to be appointed for five years by the Minister of Trade.

Art. 42. Two at least of the directors must be resident in Jutland and two at least in other parts of the country outside Copenhagen.

Art. 44. The directors shall elect a chairman from their number who must resign after one year, but is eligible for re-election. Directors must meet at least once every three months or otherwise as necessary and if demanded by Royal Bank Commissioner or Managers.

Art. 46. The directors shall receive statements of accounts and reports every three months, and are responsible for checking these statements with the books, and shall arrange for the daily audit by the proper officials.

Art. 47. The directors shall approve the accounts for the fiscal year submitted by the managers, and at the proposal of the managers determine the dividend to be paid to the shareholders.

If a director is related to a manager he cannot take part in the approval of accounts.

If the managers are dissatisfied with a decision of the directors they may take the matter to the Supreme Court, whose judgment shall be decisive.

Managers.

Art. 49. The King shall appoint two of the managers, one of whom shall be versed in agriculture, and the others shall be appointed by the directors.

The appointments shall be for an indefinite period, the appointees being subject to dismissal by the King and directors respectively. In the latter case a two-thirds majority is necesasry.

Art. 51. The managers must not be partners—active or dormant—in commercial or industrial firms, nor hold office in any other financial corporatin.

Art. 52. No bill of exchange may be discounted or other bond accepted by which any of the managers would become indebted to the Bank.

Art. 55. The managers are responsible for transacting the daily and current business of the Bank, according to the charter, including decisions on discounting, loans, purchase and sale of foreign exchange, bullion and securities fixing the rates of discount and interest and general organisation. In important cases, concerning which no legal provision exists, they shall consult if time warrants, the Board of Directors.

Royal Bank Commissioner.

Art. 61. Supervision of the business of the Bank shall be made on behalf of the State by the Royal Bank Commissioner, whose duties are attached to one of the Ministers, according to the decision of the King.

He shall see that the Bank fulfils the duties imposed upon it regarding the State and the national finances, and particularly that the metallic reserve is kept in the prescribed proportion to the circulation.

Art. 62. The Royal Bank Commissioner shall take the chair at all meetings of the directors, without the right to vote, and shall have acess to the meetings of the managers and to the Bank's book and documents. On the other hand, he shall not take any part in the daily administration of the Bank.

If he is of opinion that the managers are acting in violation of the Bank charter, he shall deliberate with the Directors and, failing agreement with them, he shall be entitled to take the matter to the Supreme Court.

Art. 63. If the Bank wish to make representations to the King they shall do so through the Commissioner.

NETHERLANDS

Netherlands Bank

Management

Art. 24 Management consist of President, Secretary and not less than two directors. Number of directors to be fixed by combined meeting of Management and Commissaries.

Art. 25 President and Secretary are appointed by Crown for seven years, two names for each post being submitted by combined meeting of Management and Commissaries.

Directors are appointed by voting shareholders (who must be Netherlanders—Article 7) for five years from nomination list of three persons, prepared by combined meetings as above.

On proposal of combined meeting as above, President and Secretary may be suspended or dismissed by Crown ; upon similar proposal Directors may be dismissed by voting shareholders.

(Members of Management are eligible for re-election).

Art. 26 Combined meeting as above may appoint Deputy-Directors.

Advisory Committee

Art. 27 Advisory Committee consists of five persons elected by voting shareholders from nomination of two persons for each vacancy prepared by Board of Commissaries. Appointment is for five years and holders are ineligible for immediate re-election.

Committee shall meet with Management at fixed periods, and shall be consulted on important matters. If there is a difference of opinion Board of Commissaries to be informed.

Commissaries

Fifteen commissaries are to be elected by, and from, voting shareholders for five years, one-fifth resigning annually and being eligible for re election. They are entrusted with the supervision of the management and the examination of the annual returns.

They meet as may be necessary and have right to demand information from management and prodution of documents.

The annual balance-sheet is submitted for approval of Commissaries.

Combined Meeting of Management and Commissaries

Combined meeting may be convened by President at any time. Royal Commissioner may attend and give advisory vote.

Duties of combined meeting include :

(1) preparing nomination list for selection of members of Management ;

(2) fixing regulations for approval of Crown ;

(3) fixing of general rules for investment of Reserve Fund and one-fifth of capital ;

(4) deciding to call extraordinary meeting of shareholders.

General Meeting

A share for voting purposes is 1,000 guilders.

Proxies are allowed. But under no condition may one person return more than six votes.

Right to vote is exercised only by shareholders who are subjects of the Netherlands.

Ordinary general meeting receives report of President on year's working and deals with distribution of profits and with vacancies in Management Commissaries and Advisory Committee, and other matters as may arise.

BELGIUM

National Bank of Belgium

Management

Art. 43. The Bank is directed by a Governor with a Board of Directors, and administered by an Administrative Council (Conseil de Regence), and is under the supervision of a Board of Censors.

There is also a Discount Committee.

METHOD AND CONDITIONS OF APPOINTMENT

Governor and Board of Directors

Art. 44. The Governor is nominated by and can be dismissed or suspended by the Crown. The appointment is for a term of five years, which can be renewed.

Art 46. The Governor may not be a member of either Chamber or hold any State pension.

Arts. 47 & 48. The Board of Directors consists of the Governor as President and three Directors, elected by the General Meeting for six years and eligible for re-election. They must be Belgian subjects by birth.

Art. 52. Neither the Government nor Directors may be on the directing bodies of any commercial or industrial body, with the exception of the Colonial Bank of Issue.

Administrative Council

Art. 53. The Administrative Council consists of the Governor, Directors and nine Regents.

Art. 54. The Regents are elected by the General Meeting for three years. They are eligible for re-election.

(1) Three of the members are elected from a double list of candidates submitted for each vacancy by :

(*a*) Representatives of the Council of Industry and Commerce and the members of the Council of Trades and Commerce each body submitting one candidate.

(*b*) The members representing industrial or other occupations on the Trade Council.

(*c*) The elected or co-opted members of the Council of Agriculture.

(2) The remaining members are elected directly, and must be leading personages in commerce, industry or banking.

Board of Censors

Arts 55 & 65. The Board of Censors consists of 10 members elected by the General Meeting for three years ; they are eligible for re-election. Three are elected from lists submitted as in Article 54.

Art. 57. No member of either Chamber may be a member of the Board of Directors, a Regent or on the Board of Censors.

POWERS

Governor and Administrative Council

Art. 62. The Governor can suspend the execution of the decisions of the Administrative Council pending submission to an urgency meeting of the General Council.

He reports to the Government any decision which would be contrary to the laws, statutes or interests of the State.

Art. 63 The Administrative Council must meet once a week. It fixes the rate and conditions of discount and advances and the amount of capital to be used as loans against State bonds or for their purchase, subject to the approval of the Board of Censors.

It deals with questions of Staff.

It verifies at least every six months the situation of the Discount Offices of the Bank.

Board of Directors

Art. 64 The Board of Directors takes charge of the daily business of the Bank. It accepts or refuses the applications for discounts and advances, and reports thereon to the Administrative Council.

In case of emergency it may decide on the rates of discount and advances, but must refer the matter to the next meeting of the Administrative Council.

Board of Censors

Art. 67. The Board of Censors has the right to supervise all operations of the Bank and to examine all the Books.

It approves the balance sheet, and determines the budget and expenditure on the recommendation of the Administrative Council.

Art. 68. It meets at least once a month.

General Council

Art. 69. The Governor, Directors and members of the Administrative Council and Board of Censors form the General Council. It meets at least once a month to consider the general situation.

Discount Committees and Offices

Art. 72 & 73. The Discount Committee at the Head Office (Brussels) consists of two sections over each of which one of the Directors presides. Each section consists of at least three members nominated by the General Council.

It examines the securities offered and advises the administration thereon.

Art. 3. A discount office or a discount committee is attached to each agency, wherever the Government after consultation with the Bank Administration considers it necessary.

General Meeting

Art. 77. The General Meeting consists of all shareholders holding 30 shares.

Art. 80. Thirty shares give the right to one vote. No one person can exercise more than five votes as shareholder and five as proxy.

Art.81. The General Meeting is held twice a year (last Monday of February and August). At the February meeting the report of the preceding financial year is submitted.

Government Commissioner

Art. 74. The Government Commissioner supervises all operations of the Bank. He may be assisted by experts for certain temporary purposes if the Minister of Finance deems it advisable.

Art. 75. He has the right at any time to be informed as to the position of the Bank, and to verify the books and cash.

Art. 76. He may attend the General Meetings, the Boards, Council or Committees when he deems it advisable.

SWEDEN

Sveriges Riksbank

Management

Art. 72 of Constitution of 1809. The Riksbank is governed by a board of seven directors in accordance with the laws laid down jointly by the King and the Riksdag.

One director (with one substitute) appointed by the King for a renewable term of three years.

Six directors appointed by the Riksdag for a renewable term of three years ; three substitutes for a renewable term of one year.

The director appointed by the King shall be President of the Riksbank.

Members of the Ministerial Council and directors of the National Debt Office may not be directors of the Bank.

Directors must be Swedish citizens.

They may not be members of any other Swedish bank other than a savings bank of the Post Office Savings Bank or of any foreign bank except the Bank for International Settlements.

Directors of the Bank and managers of branch offices may not act as agents in connection with the discounting of bills and the securing of loans.

Auditors

Art. 72. Regulations of 1866. Twelve auditors for each year six from each chamber, shall be elected each session of the Riksdag to verify the balance sheet, administration and management of the Treasury, the Riksbank and the National Debt Office.

AUSTRALIA

Commonwealth Bank of Australia

Management

Board to consist of Governor and seven other Directors, composed of :

(*a*) Secretary to the Treasury ;

(*b*) Six persons who are or have been actively engaged in agriculture, Commerce, finance or industry.

The Governor, Deputy-Governor and Directors shall be appointed by Governor-General, and shall hold office for a period not exceeding seven years, being eligible for reappointment.

The Governor and Deputy-Governor shall devote whole time to their office. The Governor is Chief Executive Officer of Bank.

There shall be a London Board of Advice consisting of three members appointed by Governor-General on recommendation of Board of Directors. The term of office is for four years, and members are eligible for reappointment.

Each Director and member of London Board shall make declaration of fidelity and secrecy.

Following are ineligible for Directorship or London Board :

(*a*) A director of any corporation (other than the Commonwealth Bank), the business of which is wholly or mainly banking :

(*b*) An officer of any similar corporation.

Board shall meet at least once a month and otherwise as Chairman directs. The Chairman shall be chosen by Board from its own members for 12 months' office.

Board may appoint from its own members Executive Committee of not less than three members to carry on business between meetings of Board.

Directors and officers of Bank shall not borrow from Bank, except that an officer may with consent of Board borrow for the erection or purchase of a home in which he intends to reside.

SOUTH AFRICA

South African Reserve Bank

Management

Board to consist of eleven Directors of whom

(1) six are to be elected by the Stockholders. They must be, or have been actively engaged, three in commerce or finance, one in agriculture, and two in industry ;

(2) three shall be appointed by Governor-General ;

(3) and two, *viz.*, the Governor and the Deputy-Governor also shall be appointed by the Governor-General.

All to be British subjects and resident in Union of South Africa. Directors are eligible for re-election and reappointment. Governor and Deputy-Governor to be men of tested banking experience and to have no interest in any other bank. Appointment to be for five years.

No person to be appointed or remain a director if he is or becomes a director, officer or employee of another bank or is a member of either House of Parliament or of a Provincial Council.

Audit. Two qualified accountants to be elected by stockholders as auditors. Treasury is authorised to inspect Bank's books and to call for returns from any bank in the Union with a view to ascertaining whether provisions of law are complied with.

WORLD OF INDIAN FINANCE

Calcutta, October 6.

Money has been usable during the days when banks were open in the past fortnight. Taking the period beginning from September 23, total sales of Treasury Bills up to date would amount to Rs. 5¾ crores. Treasury Bills Maturities in the same period should be in the neighbourhood of Rs. 6 crores. On Treasury Bill position, there has, therefore, been no disturbance in the money market. Moreover, we have reasons to think that most of the purchases of Treasury Bills are accounted for either by the Imperial Bank or the Indian Joint Stock Banks. With a hardening tendency in London discounts, and with three months Treasuries yielding less than one per cent. in India there has been hardly any inducement for exchange banks to take interest in Treasuries. If, then, exchange banks could not have experienced any drain of funds on account of Treasury Bills, how are the steady monetary conditions to be explained? In the first place, there has been quite a fair emergence of export bills in Calcutta on jute and hessian account. Gold shipments have also been lively in the Western Capital. Owing to the rise in the rupee price of gold to over Rs. 33, the inflow of gold from upcountry parts to Bombay has been increasing. Both for ready position and forward position, gold export bills have contributed a great deal of strength. Exchange banks should certainly have had to meet a considerable demand on account of the discounting of bills against merchandise and gold. In the second place, we have suggested above that it is the Indian banks that should have taken a lion's share of the Treasury Bills sold in the past few weeks. Now, the Imperial Bank has, since the past half year, stopped all cash credit facilities to Indian banks. Formerly the practice was to have a cash credit facility for a specified maximum amount with a minimum interest clause. The Imperial Bank is not affording this facility to Indian banks. If the latter have to seek the assistance of the Imperial Bank, they must take fixed loans for a minimum period of seven days. While the cash credit arrangement was possible, Indian banks could operate on a lower cash ratio, relying on the undrawn portion of the cash credit for emergency. Now that they have to take a fixed loan for a fixed period, the need for maintaining a higher cash ratio results in the Indian banks having considerably larger sums to lend out in the short loan market. It follows that to the extent that these banks have put out bigger amounts in Treasury Bills in the last two or three weeks, the floating supplies in the call loan market are reduced.

That the surplus resources in the hands of banks are on the small side is indicated by the smaller amount of applications on the Treasury Bills tender day on October 5. The total amount of applications amounted to Rs. 1.65 crores as against Rs. 3.01 crores on September 25. Tenders for sterling at £1.2 million on October 5 compares with £.22 million on September 25. With money rates in London showing an uprising tendency, exporters and shippers have been anxious to get the arrangements for their bills fixed up. They have, however, been trying to bargain for cut rates. But for the very reason of the rise in London discounts, bankers are not keen on meeting them even half way. While bills have made their appearance on an increasing scale, there has hardly been any enquiry for remittances. The result is that there has been a very firmish undertone in the exchange market.

While the gold market in Bombay has been extremely lively and active dealings have taken place therein, the share market has been passing through panicky conditions. It has been known for some time that the affairs of the mills in the Currimbhoy group were not as satisfactory as one might wish. A few years ago, His Exalted Highness the Nizam of Hyderabad came to the rescue of the Currimbhoys by giving a substantial loan. The loan then given was, perhaps, mostly used up in meeting old liabilities rather than in furnishing a reserve against future troubles. In the period following the timely accommodation extended by the Nizam, the cotton mill industry has been going from bad to worse. Unfortunately for the Currimbhoys, all their eggs have been kept in the cotton mill basket. The financing of twelve mills in times when each day proved worse than the day before, and when bankers looked askance for any proposal for accommodation to cotton mills, must have been a terrible strain even to a business house of the highest standing and amplest resources. In their weakened condition, the

Currimbhoys could not stand the strain. For ten years, they put up a good fight, knowing all the time that the odds were dead against them. They made no secret that the management of the large number of mills under their control was causing serious embarassment to them. But the public had confidence that the Currimbhoys would leave no stone unturned to keep their concerns going. There was also the hope that if it came to a pinch, the Nizam would again be willing and ready to lend a helping hand to the premier Moslem business house in India.

In this confidence and hope the public are disappointed. It is now learnt that it will be practically impossible for the Currimbhoys to carry on the burden any longer ; that it would be necessary to undertake the reconstruction of the finances of the concerns ; and that this process would mean the transfer of most of the companies to the managing agency of other firms. Reconstruction of finance means the writing down of capital, which is another way of saying that the market quotations of the shares of the Currimbhoy group should suffer a retrogression. The extent of the decline will be determined upon by the nature of the new plan decided on and on the new managing agency firm to whom the transfer will be effected. Meantime, the Bombay Stock Exchange is in a condition of panic. The Currimbhoy shares have tumbled down heavily. Other share values have also declined sympathetically. Even the giltedge market has been adversely affected. But for the weakness induced by the Currimbhoys debacle, giltedge in Bombay should have recorded a substantial rise. India sterling securities have been making good headway. We have to-day the somewhat abnormal phenomenon of 3½ per cent. Rupee Paper quoting Rs. 83¼ while 3½ per cent. sterling paper is in the neighbourhood of £86½. The strength of sterling securities should have, in normal circumstances, pulled up rupee securities. But the difficulties occasioned by the rumours as regards Currimbhoys were fully exploited by the bears to hammer down prices. Since the opening of the market in Calcutta on Thursday, there has been, however, a less diffident feeling in the giltedge market. There has been a considerable investment demand for 4 per cent. 1960-70 which is quoted at Rs. 98/6. 3½ per cent. Rupee-Paper has also brightened up sympathetically but only to a small extent. 3½ per cent. New Loan has been following the fortunes of 3½ per cent. Paper. There is really no reason why any circumstance occasioning weakness in cotton mill shares should at all affect the giltedge securities. On the other hand, to the extent that industrial shares recede in popular favour, government securities should receive increasingly greater public support. The debacle in the share market, is, if the matter is understood properly, really a bull point for giltedge. The general opinion in Calcutta market circles is that this weakness in giltedge is a temporary phase ; that after the shock of the Currimbhoy difficulties is over, giltedge is bound to record a speedy rise ; and that intrinsic conditions both in India and London warrant a brighter outlook for rupee securities.

NOTICE

As the week has been cut up by holidays, the usual share tables and "World Trade and Finance at a Glance" do not appear in this issue of "Indian Finance."

EDITOR,
"Indian Finance."

The Imperial Bank's statement for the week ended September 29 shows ways and means advances at Rs. ½ crore. In view of the fact that early month disbursements should have been provided for in the week following and in view of other September-end commitments, it is quite likely that the next return of the Imperial Bank might show an increase in the ways and means advance by anything like Rs. 3 crores.

The exchange market has maintained a very firmish undertone. Bills have been making their appearance on a satisfactory scale. On the weekly tender day applications for £1,205,000 at 1s. 6 1/16d., were received and allotted approximately 83 per cent.

The closing rates are: 1s. 6 3/64d., October-January T.T. ; 1s. 6 1/32d., February-April T.T. ; and 1s. 6d., September T.T.

Bills may be quoted 1s. 6¼d., up to February with 1s. 6 7/64d., possible December.

Money has been in demand at 1 per cent. One-month, twomonth and threemonth deposits may be quoted at 1 per cent. all through.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, October 5.

Business locally has been restricted during the week and the closure of Calcutta markets for the Puja holidays has been a contributing factor. Banks are good sellers at 1s. 6 1/32d T.T. right through to February and at 1s. 6d. for March and April a sharp rise in London discounts has tended to a hardening of bill rates for forward deliveries though very few bills have been offering, and those mostly for near positions.

The market closes with a very steady undertone. There has been some enquiry for interbank call money at 1 per cent with lenders scarce.

The securities market was erratic. 3½ per cent Paper during the period under review gradually sagged to Rs. 83-8 and then suddenly spurted to Rs. 84-3 on news of a 2½ per cent British Loan. The market again came down owing to sales by bulls and lack of investment support. The lowest touched on the local market was Rs. 82-14 and subsequently it recovered to about Rs. 83-4. 4 per cent 1960-70 loan has been persistently bought for investment account from about Rs. 98 to Rs. 98-5 with buyers over. A good investment support was forthcoming in 5 per cent 1945-55 loan, 4 per cent 1934-37, 4 per cent 1948 and 5½ per cent 1938-40 and 3½ per cent 1947-50. 5½ per cent 1938-40 has put on a few annas at Rs. 107-12. The rest show fractional losses. Mysore Government securities were quiet. 5½ per cent 1938 changed hands around Rs. 109-7 on Bombay account and 5 per cent 1955 at Rs. 113-8. There were no transactions in the Port Trust or Municipal debentures, owing to lack of sellers in joint stock company debentures. There were buyers for Singareni new debentures at Rs. 2 premium.

Imperial Banks af...ter touching Rs. 1,230 reacted to 1,215, the Contributories being a dull market at Rs. 300, at which rate some business transpired. Central Banks were taken up at Rs. 24 with sellers over. Mysore Banks advanced one point and were transacted at Rs. 217 with buyers over.

Electric shares were quiet with Trichys bid up to Rs. 143 and Vellores Rs. 9-8, on rumours of a dividend.

Sugars were easy and in the absence of support Deccans both big and small weakened.

No business was done in cements owing to Bombay being shut for forward business.

Rubber attracted greater attention on the advance in the price of raw rubber. Malkankaras were taken up at Rs. 27 and Rubber Plantation Investment Trust at £1-7-3. Cochin Malabars (Rs. 2-6-0) paid were wanted at 15 annas and Thirumbadis at Rs. 4-8 with sellers quoting at Rs. 1-2 and Rs. 5-8 respectively.

Teas were steady Periakaramalais were taken up at Rs. 30 and Vellamalais were bid up to Rs. 6-8.

In the miscellaneous section, beyond isolated deals in Spencers ordinary shares at Rs. 8-8, W. E. Smith ordinary at Rs. 25 and Singareni collieries at Rs. 7-10, there was no outstanding feature. Markets closed with a quiet undertone and there may be scattered falls.

FINANCE ABROAD

	Sterling Dollar	Sterling Franc	London Price of gold
Sept. 28 ...	4.71⅝	79.68	132s. 4d.
Sept. 29 ...	4.73⅜	79.46	133s. 3d.
Sept. 30 ...	4.75½	79.34	133s. 1d.
Oct. 2 ...	4.78¾	78.68	133s. 5d.
Oct. 3 ...	4.78⅞	78.87	134s. 8d.
Oct. 4 ...	4.76⅝	78.71	134s. 6d.
Oct. 5 ...	4.74¾	78.90	133s. 8½d.

The decline in the dollar in terms of sterling and in sterling in terms of the franc has continued apace during the week. The dollar at one time came as low as 4.78¾ and closed on Thursday at 4.74¾. Sterling had an uninterrupted fall up to October 2, to the level of 78.68 and has thereafter showed a mild recovery closing at 78.90. Air mail reports confirm our reading of the situation a fortnight ago that the decline in sterling-franc rate is due to the "hands-off" policy of the British control and that in pursuing the policy the authorities were governed primarily by the fact that the decline was due to causes which had little to do with the economic and financial position in Great Britain or over which the authorities had little or no control.

The outstanding feature of the international financial situation to-day is the large-scale flight from the dollar which is reported to have amounted by now to over thousand million dollars. And it is this flight that is responsible, in the main, for the pressure on sterling; for such transactions, as has been explained at length in our Overseas columns, are put through the London market and sterling is subject to the full pressure of these forces. It will thus be seen that the forces which tend to depress the dollar in terms of sterling are precisely the same forces as tend to depress the value of sterling in terms of the franc and other gold currencies.

The week-end sees the newspapers emphasising the critical phase into which the American recovery administration has now passed. Much has been made of the coincidence of the flight from the dollar, the recrudescence of labour troubles in an aggravated form, the discontent of consumers with the increasing prices consequent on the changes introduced by the Administration and the growing pressure on all sides for and against inflation. Perhaps some light will be thrown on the motive and the mentality behind these reports, if it is pointed out that such depressing reports of the American situation are invariably accompanied by glowing descriptions of the revival of trade and the improvement in economic conditions in Great Britain. It is not our intention to detract the significance of such improvements as are visible in the landscape of Britain's national economy. Doubtless, the August trade figures have shown signs of improvement in certain respects; but it would be unwise and irrational to overlook the fact that the heavy export industries like coal, iron and steel and cotton textiles are still experiencing an uninterrupted decline in the volume of British exports to foreign countries. This circumstance tends to confirm the view held by competent observers all over the world that the defects of the British economic system to-day are of such a fundamental character that one should not be too elated over an improvement here and there. The fundamental position in America on the other hand, has no distressing features comparable to those in Britain. That the programme inaugurated by Mr. Roosevelt should be confronted at every stage with numerous and serious obstacles was not overlooked by either the supporters or the sponsors of that programme, and least of all by Mr. Roosevelt himself. Thus it may be said that, while in the case of Britain the immediate problems are comfortable and the remoter problems nearly insoluble, in the case of America the long view is encouraging and the difficulties of the moment seem almost overwhelming. But in a position like that what matters is the courage and the determination and the capacity to enthuse popular support of the man at the helm. And who can doubt that Mr. Roosevelt has these requisite qualities in abundant measure?

The fortnight since the last issue of *Indian Finance* is notable for the last stage of the British conversion operations which began with the conversion of the £2,000 millions of war debts. Particulars were announced on September 27 of the new issue of £150 million of new loan which is to be an addition to the existing 2½ per cent conversion loan 1944-49. It was to be subscribed partly by cash and partly by conversion. The cash part of the loan was issued at a price of £94 per cent giving a nominal yield of £2-13-2 per cent. If the loan were redeemed in 1944 the yield on redemption would work to £3-3-1 and if, on the other hand, the Government were to avail of the full term, the redemption yield would be reduced to £2-19-7. £55 million of the existing loan was issued by tender before the weekly sales were suspended at the end of May. And the price of this part is £94-4-8. It is now proposed that the remaining parts will be spread over the next two months, the last payment being due on Decmeber 1st and the first interest payment on April 1st, 1934.

The conversion offer is open to holders of 4½ per cent. Treasury Bonds due for redemption on February 1st. Those who elect to convert will receive £106-7-6 of the new conversion loan for every £100 nominal of the Bonds converted and will receive on February 1st a special interest payment of £1-7-8 per 100 of such bonds and on April 1st a full half-year's dividend on the new loan along with the rest of the holders of the loan. The amount outstanding of the convertible bonds is £55,757,000 and the holders thereof will as usual receive preferential allotment in the conversion loan. The cash portion of the loan is intended to be additional to the £150 million to be issued through the Bank of England and separate prospectuses are being issued in this respect. It has been calculated that if the whole of the 4½ per cent bonds are converted, the Treasury will make a saving of interest charges on this account of £934,246 per ammun.

It is now learned that the response to the loan has proved very satisfactory.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

COMMUNIQUES AND RETURNS

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Thursday, October 5. The total amount offered was Rs. 1,65,00,000. Tenders at Rs. 99-12-3 and above were accepted in full and those at Rs. 99-12 were allotted approximately 85 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being As. 15-5 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, October 10. Successful tenderers should make payment on Friday, October 13. Other conditions are as usual.

Three months' intermediates will be sold from October 6 to 9 at Rs. 99-12-6 per cent. subject to the conditions previously announced.

Three months' intermediates sold from September 26 to October 4 amounted to Rs. 1,40,78,000.

STERLING TENDERS.

The Controller of the Currency notifies that on Thursday, October 5 tenders to the amount of £1,205,000 at 1s. 6 1/16d. were received and allotted approximately 83 per cent.

On Wednesday, October 11 £1,000,000 will be offered for tender on the same conditions as previously announced.

P. O. CASH CERTIFICATES.

During August, 1933, Rs. 1,16,71,000 (approximately) were realized by the sale of 5-year Post Office Cash Certificates, against Rs. 2,40,30,000 in August, 1932, and Rs. 1,64,62,000 in August, 1931.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st August, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,996
British Treasury Bills	16,523,162
Other British and Dominion Government Securities	12,161,508
Gold.—In England	2,152,334
In India	9,160,000
Total ...	40,000,000

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

RURAL UPLIFT

In a brochure composed of his speeches on various occasions, His Excellency Sir Frederick Sykes has made a notable contribution to the problem of India's rural uplift. In saying this we are aware that in the past many gifted minds have been devoted to a study of these problems and that as a result numerous schemes have been propounded. Attempts, too, have been made here and there to tackle them in a practical manner, with results not altogether heartening. And in the nature of things it cannot be that Sir Frederick has given us a panacea by which all our rural ills will before long be a thing of the past. What Sir Frederick can justly claim credit for is that he has succeeded in clarifying the immediate objectives of rural reform and the practical approach thereto. For all social problems in India have, for a long time, suffered grievously from the haziness of our cultural ideals. On the one hand, there are large numbers of Indians who are, doubtless, enthusiastic in the case of rural reform, but are singularly incapable of appreciating the peculiar requirements of Indian rural life as distinct from the needs and problems, with which they are themselves familiar in their own experience. On the other, there are others, perhaps more numerous, who regard village reconstruction as the means of reviving the ideals of ancient Indian life which have little or no chance in the world that is now fast developing under our eyes. It should be easy to appreciate that, if rural reform is not looked upon as a set of particular tasks to be accomplished, numerous political, cultuarl and economic questions will inevitably intrude on our attention, tending to fog the main issues and side-track us from the ends we must pursue. It may also be pointed out here that there is a different class of workers in village reconstruction, who do not belong to either of the two categories mentioned already, but who are none-the-less ineffective in as much as their preoccupations are confined to particular movements like co-operation, or the like.

* * *

What is required, therefore, is the capacity to state the rural problems with freedom from social, cultural or economic fads and to outline the methods by which the solution of such problems might be attempted. And we believe that in this Sir Frederick has, to a large extent, succeeded. But for a few regrettable references to Mahatma Gandhi and his followers in politics, Sir Frederick has kept the rural problems apart from questions on which the bulk of public opinion must inevitably differ from the Governor of a major province. In the foreword to the brochure he gives to the movement for rural uplift what it has lacked most these days, namely, ballast. It is not that he lacks warmth of feeling for the agriculturists or that he overlooks the importance of uplifting the rural population in the future advance of India as a nation. The following culled from his foreword is testimony to the idealistic fervour which has impelled Sir Frederick to devote himself to these problems :

> The economic controversies of to-day will be a short page in history a generation hence, and the political questions which now occupy our minds will have been displaced by new movements and interests. But if by close study and incessant labour, men and women of our generation succeed in laying some sound bricks in the structure of rural betterment, their work will last and our successors will continue at the point where we have left off.

The beginning of any movement of rural reconstruction is the recognition that the betterment of the villager and the village is the supreme interest of India and that it is primarily by and through her agriculture that India will become more prosperous. This is not merely because of the numerical preponderance of the rural classes over all others but because in them reside the very life and soul of the country. But Sir Frederick takes care to insist that "our cry may be 'back to the land' not in the physical sense but in a conscious reorientation of our ideas and conceding in all our thoughts and actions a just tribute to the tiller of the soil." Readiness to pay such a tribute must not land us in the illusion that village betterment depends entirely on forces from without or on the actions of people who have no link with the rural, except vague professions of sympathy for the population in the villages. The hope of achieving rural uplift through urban benevolence betrays a lack of practical sense; and, though many would disown such ideas, traces of such an illusion can be found in many a scheme that has been propounded in this regard. Sir Frederick, therefore, makes a good beginning when he says :

> We want to convince people that it depends first on things which every villager can do, if all will work together for the common end. Improvement must begin with the village, not end there. Every upward step in the general tone of the villages will react right through the body politic and come back to the village in the form of increased prosperity and increased power of utilising the help which the State is so ready to offer and of building fresh progress upon it. My object, then, in inaugurating the village movement is to initiate a new method of approach. It is a method which seeks to enlist the help of the villager himself and of the whole public in doing what is within the power of all, and in awakening and harnessing that "Will to Progress" which is, in my view, the key to the solution of India's greatest problem—that of spreading greater material welfare and with it greater contentment among the agricultural population.

The centre for every form of practical work to be undertaken under this scheme, therefore, will be the village and the method used in the past has been the development of model villages. And in order that work may be continuous it is necessary to take care that villages are not dependent on the enthusiasm of a single individual. The ideal, therefore, is that all villages should work towards becoming model villages and that the urge for improvement should be centred not in individuals but in the whole body of villagers. To this end, the motive power of all activity must be institutional rather than individual. And so Sir Frederick provides for a linking of the agencies on the basis of the present territorial and revenue divisions. As he aptly pointed out, the subject of rural development is in principle "largely a co-ordination of the work of all departments of Government which is already an essential function of the Revenue Department." And so far as this department is concerned, all that is required in addition is the evolution of certain technique or methods particularly (1) methods of organisation including forms, records, reports, statistics and rewards and (2) methods of publicity, including speeches, wireless and any new developments which may be evolved such as touring vans etc. Specialist advice has, of course, to be provided by every department of government which has a local organisation and by the central non-official associations which have been formed to assist the countryside. Above all, the Public Health, Education, Agricultural and Co-operative and Industries Departments will be close partners in the schemes and assist the revenue officers at every point.

The merit of Sir Frederick's scheme lies not so much in the structural organisation of the movement for rural uplift as in the insistance that in the last resort the work in every village will have to be done by the villagers and that it is for them, acting in consultation with the other agencies who participate in the work, to decide exactly what should be attempted and in what order. Many an endeavour has proved abortive in the past mainly because either the directors have lost themselves in unpractical idealism or because they have not taken care to limit their ambitions to the means at their disposal. Assuredly, in all this work simplicity must be the watch-word, for there is no room for the ardent reformer who is not ready to translate his enthusiasm into plain, practical work. It is necessary to recognise that a village can only undertake to improve these in one or two directions at a time; and where work is limited it is desirable that it should be directly remunerative so that the rural classes will be able to recognise that what they engage in is of direct benefit to themselves and not the pursuit of any fad. "Broadly speaking," says Sir Frederick, "it would be probably seen that improvements of sanitation should come first, education second, and improvements of agriculture third. But to the villager the order of importance may possibly seem to be the opposite of this. If these three are accepted to be the immediate practical and practicable ideals of village reconstruction, thinking men in every rural area should be able to chalk out a line of advance, unambitious and unspectacular, perhaps, at first sight, but none the less capable of securing the ends.

* * *

Practical advice on rural reform must be such that, wherever there is a Panchayat composed of public-spirited and influential villagers, it should be possible for them to follow it without that nightmare of financial paralysis into which all our dreams of the future often deteriotate. Sir Federick satisfies this requirement as closely as may be. The financial aspects of his scheme have not been discussed; but for our part, we believe that the less said about finance, the better. What we need now is the re-orientation of ideas towards the village, so far as the Government departments are concerned and the infusion of confidence in the educated and progressive members of the rural community that the uplift of their brethren is not beyond their mental and material resources.

* * *

The assumption behind Sir Frederick's scheme, is that the villages of India still retain among their population the individuals who can take the inspiration from the schemes like those of the Governor of Bombay and work them to success. The worst effect of the recent economic unsettlement is that the metropolis and the town have attracted the best sections of the rural population in a manner, that not enricheth the towns but maketh the villages poor, indeed. The educated youths, who alone, despite all that may be said against their unpracticability, possess the fire for work which is not purely selfish, have gone to the urban areas in search of work which simply does not exist. Most of them have probably spent all their possessions on an education which ultimately proves to be no help, but even a handicap, to life. This drain of capacity and youthful idealism has continued for years now; and no plan for rural uplift can be considered adequate which does not contain provisions for inducing such young men to return to their native villages.

* * *

It may be said that the landed aristocracy of the villages may be relied on as the principal prop of this movement. But we would do well to recognise that even this landed aristocracy has been weakened alike in resources and influences, in resources because of the disastrous fall in agricultural prices and in influence by the many social and political movements, with which the essential conservatism of the landed class is naturally out of sympathy.

* * *

The point we seek to urge here is that in these days rural areas, like the larger national life is sadly lacking in leadership. Relying, of necessity, on our knowledge of conditions in those parts of the country with which we are familiar, we make bold to say that, before rural development can be deliberately engineered, we must create the class which will be the mainspring of such development. It goes without saying that such a class must be capable of enlisting and enthusing support. And we believe that the time is gone when a hereditary landed class or a group of officials can satisfy our requirements in this regard. People who may be said in some manner or other, formal or informal, to enjoy the

suffrage of the rural area, can alone be entrusted with this mission. And who is better fitted to fill these roles than the educated youths whom the villages have sent away to the towns and whom present conditions in towns and villages alike call back to their homes? Whether the return of youth to the heart of India will come about as a natural evolution or as a result of a careful scheme drawn up by the leaders of the nation, we cannot say. But there is no reason why careful and adequate outlay on the nation-building services should not offer a decent living to the young men and enable them to do solid service to the country without detriment to their own individual welfare.

THE NEW INDIA ASSURANCE COMPANY

In spite of the fact that some of its departments have slightly succumbed to the world pervading trade depression, the New India, the biggest composite Insurance Company of India, is growing from strength to strength and its soundness has not been allowed to be impaired even to the slightest extent. The reserves of all the departments have been greatly augmented at the end of its year 1932-33 and they represent much higher ratios to the premiums than in the previous years. The following statement shows how the ratio of the reserves of each department to their restrictive premium incomes, have been progressing year after year during the past four years.

Departments	1929-30 %	1930-31 %	1931-32 %	1932-33 %
Marine Department ...	88.5	94.9	100.0	113.5
Fire Department ...	66.5	69.2	79.0	79.8
Accident Department ...	66.9	75.0	73.6	88.2

* * *

The total funds of the Company have increased during the year by more than Rs. 10 lakhs to Rs. 85.7 lakhs nearly. The balance in the profit and loss account, after providing all other expenses and after transfer of profits from various departments, amounts to Rs. 7,337,313. Out of this a sum of Rs. 5,34,079 has been absorbed in paying a dividend of Rs. 1-2-0 per share of Rs. 15 paid up leaving Rs. 2,03,284 to be carried forward.

* * *

The Fire account shows a net premium income of Rs. 44.4 lakhs representing an increase of Rs. 2.3 lakhs over the figure of last year. The fire fund has been strengthened further by an addition of Rs. 2.2 lakhs to Rs. 35.4 lakhs thereby increasing the ratio of the total reserves to the Premium income to 79.8 per cent as against 79 per cent in last year. Fire losses paid and outstanding during the year amounted to Rs. 23.6 lakhs. The account has revealed a surplus of Rs. 2.3 lakhs out of which a sum of Rs. 1.05 lakhs is transferred to the Profit and Loss account as contribution of profits from the Fire Department.

* * *

Both the Marine and the Accident Departments show a decrease in New business. The Premium income of the Marine department has decreased by Rs. 2.1 lakhs to Rs. 20.7 lakhs but the policy of building up the reserve funds is being vigorously carried on in every department and the ratio of reserves to premium income shows a good increase of 13.1 per cent. from 100.0 per cent. in the previous year though this phenominal increase is partly due to the decreased premium income of the year. The Marine fund has been increased by Rs. 65 thousands to Rs. 23.5 lakhs. The net premium income of this department amounts to Rs. 20.7 lakhs and the losses paid and outstanding amount to Rs. 17 lakhs nearly. The contribution of the Marine account to the Profit and Loss account amounts to Rs. 69 thousands.

* * *

The Accident department which is the smallest of the various branches of insurance conducted by this giant Corporation shows a net premium income of Rs. 5.2 lakhs (a decrease of Rs. 76 thousands compared with that of the previous year), a total loss of Rs. 2.6 lakhs, a surplus of Rs. 95 thousands out of which Rs. 45 thousands is contributed to the Profit and Loss account. Here also as in Marine account, the ratio of the reserves to the premium income shows a big increase of 14.6 per cent. to 88.2 per cent. which is partly due to the decreased premium income of the year. The Accident fund at the end of the year at Rs. 4.6 lakhs shows an increase of Rs. 20 thousands during the year under review.

* * *

Coming to the Life department of the company, it is no exaggeration to say that this department has achieved a miracle during its very short life

NOTICE

The Eleventh Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 8, Hare Street, Calcutta, at 3-30 p.m., on Monday, the 23rd October, 1933, to receive the Directors' Report, pass the Audited Accounts for the year ending 30th June, 1933, declare a dividend, and transact any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from the 16th to 23rd October, both days inclusive, and Warrants for such dividend, as may be declared, will be issued on application to those Ordinary Shareholders whose names stand in the Register Books of the Company, on the 23rd October, 1933.

By order of the Board,
W. H. THOMPSON,
General Manager.

8, Hare Street,
Calcutta, 23rd September, 1933.

of 4 years. Writing in October, 1931 about New India we wrote "we are quite aware that the word record is freely used amongst Insurance Companies, each company contending that it is in a position to claim a record of some kind or other. But new India, for its part, may pride itself on its achievement of securing a business of more than Rs. 71 lakhs during the second year and that, too, at a time when the universal economic distress has played havoc with insurance prospects all over the country and the tallest amongst Indian Insurance Companies are showing an actual fall in the volume of New Business." Writing to-day after the lapse of two years, we do not find any portents of improvement in the universal economic distress though we have seen much more troubled times during the interval. Yet it is a record of records that the New India's Life department has achieved during the year under review. During the fourth year of its existance it has reached the high water mark of Rs. 1 crore of New Business which no other Indian Insurance Company has so far done. It is true that New India had already a wide organisation among other lines of insurance, and that it has the powerful backing of the Tatas. Yet it is something amazing for a company to do a New Business of Rs. 1 crore and 5 lakhs during the 4th year of its existance.

* * *

During the year 1929-30 when the company opened its life department, it did a New Business of Rs. 35 lakhs; in the next year the New Business was more than doubled to Rs. 71 lakhs. In the year 1931-32 it reached 88.4 lakhs and during the year under review it increased by nearly 20 per cent. to Rs. 1,05 lakhs. The fact that the total business in force stands at Rs. 2,20 lakhs at the end of the year shows that much of the New Business done during these 4 years was really sound business. The New premium income amounts to Rs. 5.8 lakhs while the total premium income amounts to Rs. 10.8 lakhs. The claims paid during the year are shown at Rs. 1.26 lakhs. As required by the statute the company has published a separate balance sheet of the life fund and life liabilities (amounting to Rs. 12.6 lakhs). The life fund at the end of the year at Rs. 8.7 lakhs has been increased by over 100 per cent. from Rs. 4.1 lakhs at the beginning of the year. The other liabilities of the Life department amount to Rs. 3.9 lakhs including a sum of Rs. 1.94 lakhs given to this department as advance from the General department, free of interest.

* * *

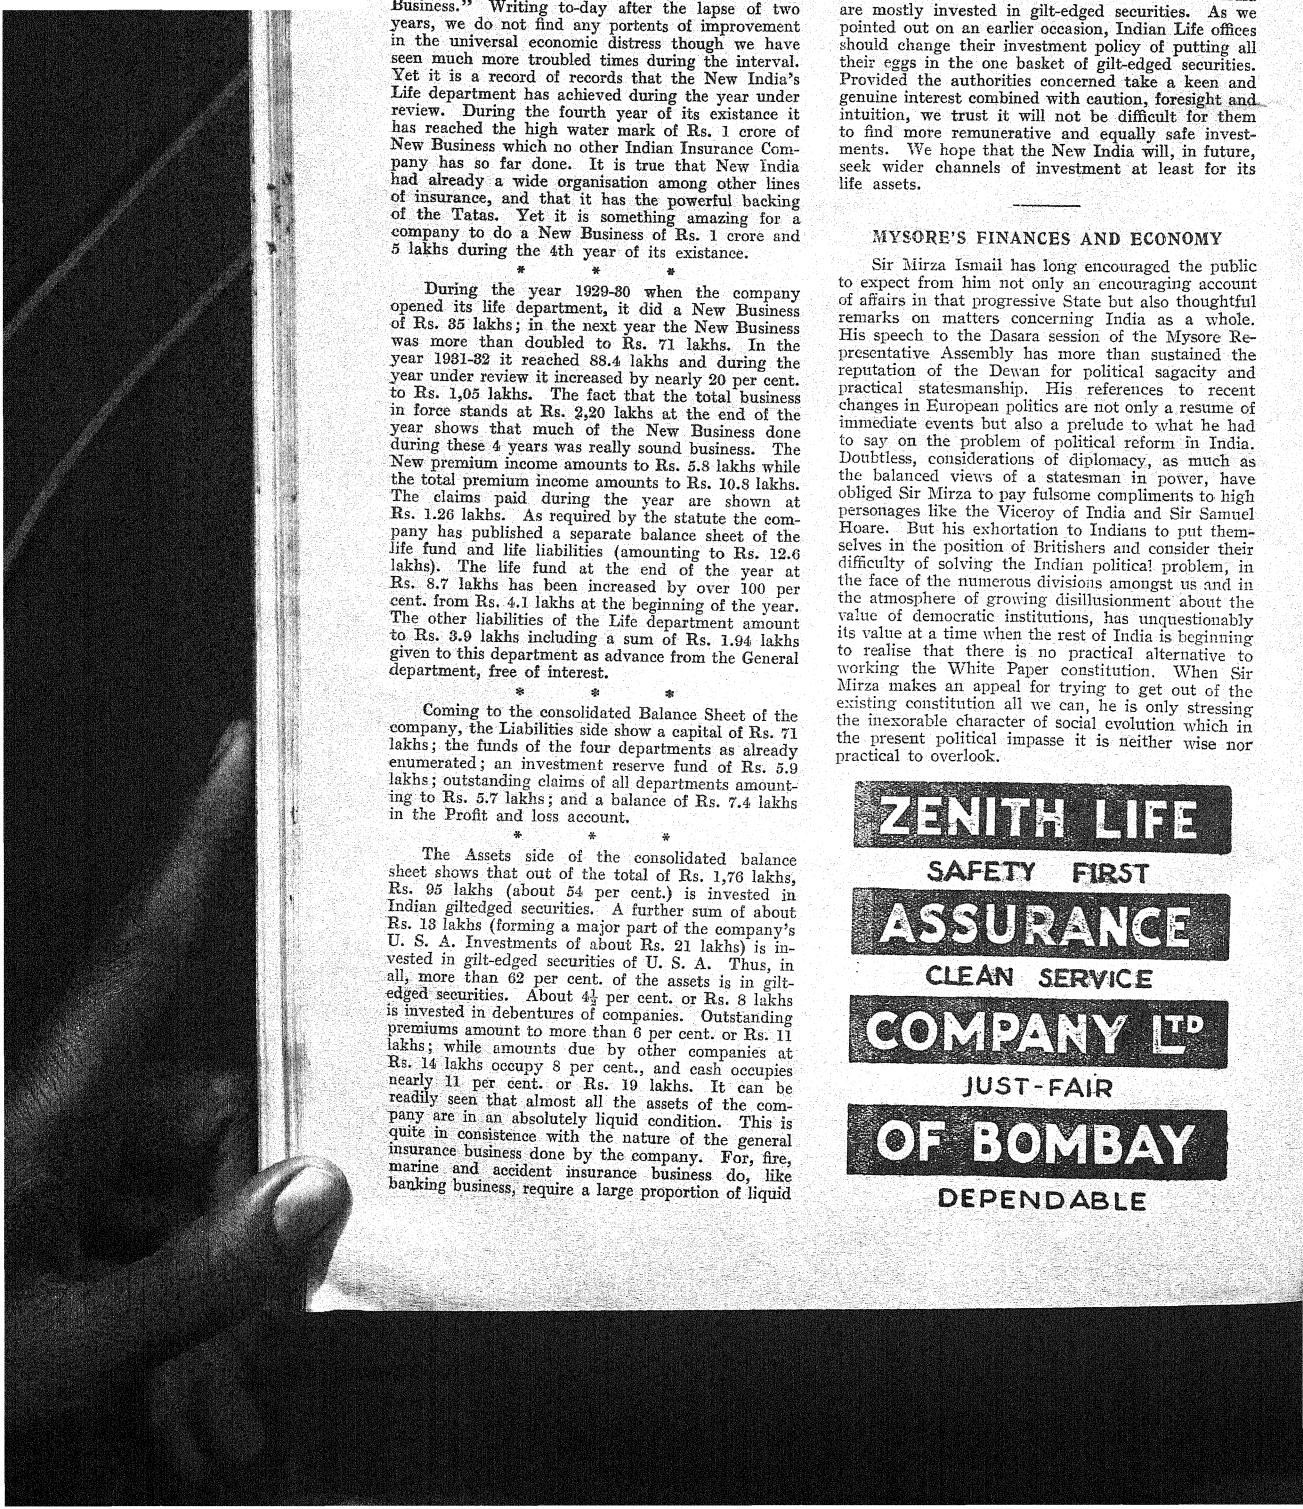
Coming to the consolidated Balance Sheet of the company, the Liabilities side show a capital of Rs. 71 lakhs; the funds of the four departments as already enumerated; an investment reserve fund of Rs. 5.9 lakhs; outstanding claims of all departments amounting to Rs. 5.7 lakhs; and a balance of Rs. 7.4 lakhs in the Profit and loss account.

* * *

The Assets side of the consolidated balance sheet shows that out of the total of Rs. 1,76 lakhs, Rs. 95 lakhs (about 54 per cent.) is invested in Indian giltedged securities. A further sum of about Rs. 13 lakhs (forming a major part of the company's U. S. A. Investments of about Rs. 21 lakhs) is invested in gilt-edged securities of U. S. A. Thus, in all, more than 62 per cent. of the assets is in gilt-edged securities. About 4½ per cent. or Rs. 8 lakhs is invested in debentures of companies. Outstanding premiums amount to more than 6 per cent. or Rs. 11 lakhs; while amounts due by other companies at Rs. 14 lakhs occupy 8 per cent., and cash occupies nearly 11 per cent. or Rs. 19 lakhs. It can be readily seen that almost all the assets of the company are in an absolutely liquid condition. This is quite in consistence with the nature of the general insurance business done by the company. For, fire, marine and accident insurance business do, like banking business, require a large proportion of liquid assets. But life business does not require much of liquid assets as the premium income of a progressive life office will be more than sufficient to meet all its outgo. The two soundest canons of investment of a life fund are (1) absolute safety of capital and (2) High interest earning power consistent with the first canon. While gilt-edged securities satisfy the first one, it does not and can not satisfy the second principle particularly in to-day's times. As such, it is high time that Indian life offices should seek other sources of more remunerative and safe investments. We find that even the life assets of the New India are mostly invested in gilt-edged securities. As we pointed out on an earlier occasion, Indian Life offices should change their investment policy of putting all their eggs in the one basket of gilt-edged securities. Provided the authorities concerned take a keen and genuine interest combined with caution, foresight and intuition, we trust it will not be difficult for them to find more remunerative and equally safe investments. We hope that the New India will, in future, seek wider channels of investment at least for its life assets.

MYSORE'S FINANCES AND ECONOMY

Sir Mirza Ismail has long encouraged the public to expect from him not only an encouraging account of affairs in that progressive State but also thoughtful remarks on matters concerning India as a whole. His speech to the Dasara session of the Mysore Representative Assembly has more than sustained the reputation of the Dewan for political sagacity and practical statesmanship. His references to recent changes in European politics are not only a resume of immediate events but also a prelude to what he had to say on the problem of political reform in India. Doubtless, considerations of diplomacy, as much as the balanced views of a statesman in power, have obliged Sir Mirza to pay fulsome compliments to high personages like the Viceroy of India and Sir Samuel Hoare. But his exhortation to Indians to put themselves in the position of Britishers and consider their difficulty of solving the Indian political problem, in the face of the numerous divisions amongst us and in the atmosphere of growing disillusionment about the value of democratic institutions, has unquestionably its value at a time when the rest of India is beginning to realise that there is no practical alternative to working the White Paper constitution. When Sir Mirza makes an appeal for trying to get out of the existing constitution all we can, he is only stressing the inexorable character of social evolution which in the present political impasse it is neither wise nor practical to overlook.



But more ardent nationalists in the country will be relieved to note that Sir Mirza's practical outlook has not blinded him to the inestimable values which the country can realise from a personality like the Mahatma. When more than one section of politicians in the country, not excluding the ranks of the Congress, are busying themselves with plans for the formation of new political parties and taking for granted the end of Mahatma's political career, it is significant that a statesman of Sir Mirza's standing and credentials openly avows that he is "not one of those who wish Mahatma Gandhi to retire from politics." His remarks on this question are worth reproduction:

> And here I am tempted to say that there is one man above all others who can help us towards a reconciliation of our difficulties, and towards that new phase of character that is the ground-work of self-government. I am not one of those who wish Mahatma Gandhi to retire from politics. There never was a time when India so badly needed the guidance of a genuine leader, and in him we have one who holds a unique position in the country and is not only a convinced lover of peace and an ardent patriot, but also a far-seeing, sagacious statesman. I feel that he is qualified far better than any one else to reconcile the conflicting elements in the country and to induce them all to march together a further stage along the road that leads to self-government. He also has it in his power as no one else has to establish the happiest relations between India and Great Britain. I feel sure that the Government have in him a powerful ally and Great Britain a true friend. If he should retire from politics at this juncture there are indications that the arena would, in all probability, be occupied by demagogues and vain Visionaries out to mislead themselves and the country by meaningless shibboleths.

The speech of Sir Mirza should enable politicians in British India to clarify their political bearings. While it may be true that further advance along every line depends on acceptance of the White Paper constitution and getting the best out of it, it would be disastrous if this departure from the political creed of the Mahatma ends in utter forgetfulness of his past services and further potentialities, and leaves the country to be torn between sordid demagogues on the one hand and self-seeking sectional politicians on the other.

To turn to affairs concerning Mysore, Sir Mirza has reiterated his view that, provided the rights of the Princes and the individuality of their states and their own personal prestige are recognised and respected—and they have been fully conceded in principle—"there is no reason why the Princes as a body or the more important of them individually should alter their intention to adhere to the federal plan. On the contrary, every well-wisher of theirs feels that it is most desirable that they should take a worthy part in the peaceful evolution of India. We should all co-operate in creating a living India and co-operation is the motto of the times." As may be expected he has also reiterated the claims of Mysore to a remission of 11½ lakhs on account of fixed contributions to the Central Government, a claim which has been repeatedly conceded in principle but the fulfilment of which has been delayed on grounds of financial expediency.

On a somewhat different footing is the demand for the restoration to the jurisdiction of His Highness the Maharaja of the civil and military station which is an integral part of the Mysore State. The request in this behalf was made as early as 1924; and it may be expected that Mysore will not rest quiet till it has been fully considered.

As for the budget, the revised estimates for 1932-33 presented in the June session of the Assembly anticipated a revenue deficit of 21 lakhs after providing the full contribution of 19 lakhs to the loan sinking fund and contributions amounting to 12 lakhs to the several depreciation funds. The preliminary accounts for 1932-33, which are now ready, show an addition of 4 lakhs on the revenue side, the increase being mainly under land revenue and Krishnarajasagar Hydro-Electric Works. The total expenditure chargeable to revenue however shows an excess over the revised estimates of only Rs. 2 lakhs, this net increase being due to the entire sum of 5 lakhs received from the Government of India on account of the petrol tax having been drawn up for road repair during the year, against an expenditure of 3 lakhs provided for in the revised estimates. The net result of the year disclosed an improvement of Rs. 2 lakhs over the revised estimates.

The general economic development of the province considered from the standpoint of the well being of the people has gone forward in spite of the depression which has affected the major state enterprises. The iron works have naturally been subject to the conditions which have necessitated the request for renewal of protection and consequent reference to the Tariff Board. Cast iron pipes have been subject to Japanese competition. There was a stoppage in the blast furnace for ten weeks for relining and there was, therefore, a reduction in the output of iron. The reduced output of the furnace and the continued slump in prices resulted in a loss of 2.16 lakhs in the year. But the railways worked well, the net revenue from this source being 22.63 lakhs against 26.13 lakhs in the year before giving a return of 3.81 per cent. on the capital investment of 5.43 crores.

But the developments of Mysore have not been impeded because the extension of electrical supply has gone ahead; and the new irrigation projects have enabled an increase in the acreage under paddy and ragi of 38,000 and 49,000 acres respectively. The tone of the local administration is being improved from day to day owing to the more efficient working of the co-operative movement and the spread of education over all parts of the State.

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

Clive Street Gossip

To those who have lived in Bengal and who understand the spirit of Bengal, the Puja season has a peculiar thrill; it stirs up strange emotions; it evokes a unique response. Puja is the star festival of this province; and the observance in the other provinces are on different lines—I was almost going to say, sectional lines. In South India, the Durga Puja is more or less a feminine function. The housewife, the girls and the kids set up a toy-house, with knick-knacks of diverse kinds arrayed, tier above tier, made up of all the benches and other odd furniture of the house. Fruits in clay shaped and coloured to look somewhere near genuine ones; vehicles of all sorts in all stages of repair; images of Gods of varied ranks; enamel-ware representing constables, village headman, post-peon and other functionaries; shells, conches, stones of various hue—trifles of a miscellaneous nature are brought out from the lumber room, cleaned up, and set out on these tiers covered over with white cloth. The adjacent walls are all studded with pictures. In the vacant space at the foot of the rows on rows, a miniature tank is improvised, wherein the toy fish and tortoise float in real water. The girls of each house vie with their neighbouring fellows to have a larger collection, more rows of covered benches, bigger fish in the tank and walls more crowded with pictures. Of evenings, the girls receive their friends and visit their friends. Great conviviality prevails, thanks to exchange of pan, supari, and sweets; and thanks to the amateur songs of the buudding musicians. The Puja in Madras is a social—and not a religious-festival, beloved by the fairies and left strictly alone by their uncouth and rough-mannered brothers.

* * *

In Bihar the Puja is a masculine function. The *Shaktas* of that province observe the festival with deep religious fervour. Long and late hours of worship; fasting till the sun is past the meridian; sacrifice of goats; worship again in the night—these are some of the attributes of the Puja observance. The late Maharaja of Darbhanga was a sincere *Shakta*. He used to get up before the sunrise, bathe in cold water and get ready for the day's *puja*. He would himself recite the *mantras* and carry out each detail of the religious ceremony. On none of the nine days, would he be free till late in the afternoon. Meantime he would take nothing to eat or drink, not even any of the popular beverages like tea. The Puja in Bihar is an exacting and austere function.

In Mysore, the Puja is an official ceremony. It is marked by pomp and splendour, pageantry and processions, resplendent scenes and impressive *durbar*. Many visitors, invited by the State and otherwise, foregather in Mysore to witness the Puja pageant.

Bombay is left cold by the Puja. Its real festival is *Diwali*.

In Bengal, on the other hand, the Durga Puja is a domestic, social, religious and national festival. Everyone-men and women, elders and children, rich and poor, patriarch and family, earning member and dependents—the entire family, the entire village, the entire province celebrate the Puja with a thrill, fervour and abandon. This is the season when troubles are forgotten, enmities are left behind, family unions take place, and everyone drinks of the fountain of friendliness to all and peace with all. The Bengalee is an emotional race; and there is real meaning in this annual renewal of friendship and banishment of enmity. Writing as one domiciled in Bengal, I wish everyone of my readers all manner of felicity, serenity of mind and outlook, and peace with oneself and the world.

* * *

Appropriate to the season, I may extract the following letter received from one who is a bank assistant and a subscriber on usual concession terms:

Dear Sir,

I am in receipt of your letter of 2nd inst. and enclose a cheque for Rs. 12 to be apportioned as under:
1. 6 months subscription on my account: Rs. 6-0-0.
2. 6 months subscription on account of . . . . . Assistant, Imperial Bank: Rs. 6-0-0.

I intend to send as *Diwali* present to my above friend *Indian Finance* for six months from 19-10-33.

Yours faithfully,
R. R. PANDIT.

* * *

After a year of uninterruptedweekly issues, with a good few supplements and mid-week numbers thrown in, the *Indian Finance* office had a week off for the Pujas. I availed myself of the holiday to pay a visit to Jamshedpur in the company of Sir Shunmukham Chetty, Mr. K. P. Thampan, M.L.A., Dr. P. P. Pillai and Mr. N. Sundaresan. Mr. J. C. Mahindra of the Tatas accompanied us on the to and fro journeys. It was altogether a happy and harmonious holiday party. But, at the other end, it was a holiday only in the sense that we had functions and entertainments. Otherwise it was strenuous, physical work from early morning to late evening. It takes fully twelve hours to make a complete tour round Tatas' factory even when you are in the hands of the most capable guide who arranges for cars to wait at the other end of each mill. By the time you have gone through the entire works, the pedestrian activity involved should be easily in the vicinity of fifteen miles. Walking all the time along yards made warm by red-hot iron and steel at a temperature well over 1000 degree F., is not exactly an ideal way of getting rest and recreation in a holiday.

* * *

All the same, it was a most instructive and exhilarating visit. You feel elated that here is a concern of which India can be proud as equal to any the best-planned factory in the Empire. Whoever planned the Tata Iron Works knew his job. And

Clear Striking Proof!

In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

whoever is now keeping the works going knows his responsibility. The entire staff work with 100 per cent. efficiency and cheerfulness. There is the utmost co-ordination. Rationalisation in the highest sense is the rule. Foreman and workman, superintendent and day-labourer—each one is proud of his contribution to the gigantic work done at Jamshedpur. It is a colony cosmopolitan in the completest sense. There are Americans and Germans, Englishmen and Scotchmen, Parsees and Bengalees, officers and workers from all provinces, Hindus, Moslems and Sikhs. There is no racial or communal feeling or prejudice amongst the workers or staff. Let it not be forgotten that there has been progressive, even rapid, Indianisation of the higher staff. The Europeans on their side have not raised a hue and cry for this change-over. Many of them have gladly helped and hastened Indianisation.

* * *

It was roundabout 1920 that the plans for the subsidiary concerns were taken on hand. The Tatas did not want their attention to be diverted by allied concerns. Their policy was to encourage firms of standing to sponsor the subsidiary concerns, arrange the necessary finance and look after the management, on an arrangement wherein the Tata Steel Works would extend varied and substantial facilities. Lease of land for the factory and quarters was to be given on cheap terms ; adequate water supply and power from Tata generating plant would be made available ; for raw material, concession rates would be allowed. The idea was, on the one hand, to make Jamshedpur a growing industrial centre and, on the other hand, to stimulate an automatic disposal of a portion of the products of the steel company. The terms offered to promoters of subsidiary companies were generous and attractive. Sir Lalubhai Samaldas, in partnership with Mr. Walchand Hirachand and Mr. Kapadia, started the Steel Wire Products Company. Kiburns promoted Enamel Iron Ware and Enfield Cable Company. A Syndicate connected with Mr. Mathradas Gokuldas was responsible for Agricultural Implements. Shaw Wallaces started the Tin Plate Company with a view to furnish the plates needed by the Burmah Shell Company and also by a few cigarette manufacturers. It is only in Tin Plate and Agricultural Implements that Tata Steel Company took a share in capital.

* * *

All the subsidiary concerns passed through very difficult times during the last decade. The Tin Plate Company has continued under the same management. In respect of the others, there has been change of management. Enfield Cable is now re-christened Indian Cable Company and is working in association with British Insulated Cables. Since the new arrangement came into force, the Indian Cables have become a complete and self-contained unit, with a factory well-equipped and well-planned-out. From the spectacular point of view, the visit to the Indian Cable workshop is most interesting. Labourers have now received good training and become greatly skilled. The products turned out in the Jamshedpur factory stand comparison with imported articles and have captured a good portion of the Indian market.

The Agricultural Implements have now come under the direct management of the Tatas. But it is in the nature of a neglected wife. The place is shoddy, the lay-out clumsy and the works far from being a paying proposition.

The Steel Wire Products have been taken over by Mr. Indra Singh and he has the advantage of starting work on a reduced plan of capital. For nails and other goods turned out in his factory, there is a large market in India and I am sure Mr. Indra Singh will have real success in his venture. From contractor to industrialist is a suitable climax.

The Tin Plate Company is kept in a most efficient condition ; and as we were led round by Mr. Townend, Director of Shaw Wallace in supervision of the works, we could see that he was justifiably proud of the planning and working of his factory.

* * *

It is now possible to say that most of the subsidiaries in Jamshedpur have turned the corner and that they should start making profit on a scale which would make the shareholders happy. From the point of view of the Tata Steel Works, they have started consuming increasing quantities of steel ; and they go to make up a complete industrial colony. The labour employed in the subsidiary works would be nearly 5,000. The example of the Tatas in the matter of housing of labour has proved infectious. And it may be said that workmen in Jamshedpur are as well-housed as they are nowhere else in India. Over 5,000 labourers have been helped to own their own houses. The Tatas give the necessary loans on a nominal rate of interest and also supply materials like timber and bricks at cheap rates. One of the most interesting aspects of the working of the Tata factory is this stabilising of the interest of labourers in Jamshedpur. Migratory and seasonal labour has been a serious problem for Indian industry. This problem has been properly tackled and suitably solved by offering inducements to the workmen to own their own houses. The hectagonal plan of labour quarters is a successful experiment from every point of view. There is plenty of fresh air and open space. Each house has its little plot of garden. Filtered water is supplied in any quantity. Free cinema is provided from time to time. Athletics and sports are encouraged. Labour conditions in Jamshedpur are tending to be more and more wholesome owing to the personal attention and fatherly care of Mr. J. A. D. Naoroji, the grandson of the famous Mr. Dadabhai Naoroji. I cannot do better than sum up the impressions of our visit in the words of Sir Shunmukham : "Every Indian should be proud of what has been achieved in Jamshedpur. Every industrialist should emulate the example of the Tatas as regards the treatment of labour."

* * *

The biggest achievement, apart from the amenities to labour, is the striking Indianisation of the top-men. The Director-in-charge on behalf of the Tatas is no longer an European. Mr. A. R. Dalal, as Managing Director and Agent in Calcutta, is a happy selection. The second man at the works is Mr. Gandhi, well-travelled and well-experienced but extremely young ; and he was the first Indian to be the head of the biggest steel works of the Empire. The sales section was a preserve of non-Indians. It is now Mr. J. C. Mahindra who handles goods of the value of over Rs. 10 crores per annum over a far wider market and under far more difficult conditions. The General Manager used to strut about as a miniature Almighty. But Mr. Keenan is the simplest and most affable human one would like to come across.

(From Our Correspondent).

Bombay, October 4.

Conditions in which labourers in Bombay live are so execrably bad that we have to be grateful for all those occasions when prominent publicity is given to this sorry state of affairs. One such occasion was furnished by the conference of the women of Bombay in the Wilson College Hall for discussing the various aspects of labour as it affects women and children employed in factories.

Lady Ramanbhai Nilkanth of Ahemedabad presided over the conference while Mrs. Faiz Tyabji, President of the Bombay Presidency. Women's Council, was, so to say, the Chairman of the Reception Committee. The lead was taken by the Bombay Presidency Women's Council. Delegates attended on behalf of the affiliated societies of the Council as well as from Ahemedabad and Sholapur. The labour unions were also represented. Over 200 women were present at the conference.

There were plenty of speeches and many visits to labour quarters and labour centres. I could not go so far as to say that any tangible good would come out of the present conference. But I do maintain that, as I said at the outset, anything that brings labour problems to public gaze is to be welcomed.

There is another aspect of the matter. If labourers are to have cleaner lives, more wholesome conditions of housing and less and less addiction to habits that pull them down as human beings, it is the womenfolk amongst labourers that should be first brought up to ideas of a healthier and sunnier life. The women workers can, and do, radiate an influence that shapes the lives of males for good or for bad.

From this point of view, experiments have been tried in Western countries of appointing Women Estate Managers in large factories. These women managers come in constant touch with the female workers and inspire all those activities which have, as their aim, the teaching of clean and simple living to female labourers. This experiment has met with great success. Slums have been greatly improved through this means.

By the same token, if the male population of any city are to realise their responsibility to the slum areas, there is no more forcible way of wakening such consciousness than through their womenfolk. If our ladies bestir themselves in the cause of labourers, it will be at once an example and a taunt to us. It is for this reason that this first conference of the women of Bombay must be acclaimed as an important event.

Lady Nilkanth, while stating that labour had several aspects—social, moral, economic and political —and while admitting their inter-dependence, suggested that it would be more profitable to concentrate the attention of the Conference on the social and moral sides of the question. As regards both these aspects, certain important recommendations have been made by the Royal Commission on Labour; these recommendations are the result of exhaustive enquiries, careful deliberations and long and arduous sittings. Are these recommendations being carried out by the State?

In the pre-occupation of Government officials with the so-called constitutional problems, they are likely to take an indifferent view of the urgency of labour legislation. Lady Nilkanth pointed out that "unless and until these are enforced by law, they are likely to remain on paper, and one of the chief reasons for this Conference is that it should agitate in such a manner that these recommendations may find a place in the Statute Book."

Sir Frank Noyce who is in charge of the Industries and Labour Department is himself quite keen and alert in this matter. He should feel all the more grateful to Lady Nilkanth and her colleagues if they could help to create a public opinion conducive to the favourable working of the new labour laws.

Amongst the addresses delivered, much interest belongs to that of Mr. Dalal of E. D. Sassoon and Company. It will be remembered that the Labour Commission has made a recommendation for the appointment of labour officers in mills. E. D. Sassoons have already acted on this suggestion and appointed Mr. Dalal as the labour officer. Mr. Dalal showed clearly how "the power invested in the jobbers, who engaged and dismissed at will, and who, as mechanics, were held responsible for the efficiency of the workmen under them led to a great deal of corruption. The Labour Commission realising what unlimited power was being placed in the hands of the jobbers and how greatly it could be abused had strongly recommended the appointment of a labour officer whose business it would be to engage new hands, dismiss those who had to be dismissed after careful investigation of the jobber, and to look into complaints."

Mr. V. L. Mehta, the fervent idealist of the co-operative movement, spoke on the Reserve Bank Bill in the hall of the Provincial Co-operative Institute. His main purpose was to examine the Reserve Bank scheme in special reference to the co-operative movement in India. As it is, the directorate would be represented of capitalist interest; and agricultural interests do not get a peep in. Mr. Mehta's suggestion that a representative of the co-operative institutes in India be included in the directorate of the Bank is not only reasonable but essential.

In fact, in the scheme suggested by the Joint Select Committee of 1927, the Provincial Co-operative Banks were to be entitled to elect one director to the Board of the Reserve Bank. Some of the speakers in the Assembly referred to the necessity of this provision being included in the present Bill. I do not think that Sir George Schuster will have any serious objection to this proposal.

In a circular that has been sent by the Finance Member to the members of the Select Committee appointed last month, suggestions have been invited for the names of practical bankers who should be invited to confer with the committee. Amongst the groups mentioned, Central Bank and Bank of India are included, as also the Imperial Bank, the exchange banks, the co-operative banks and indigenous bankers. So far as co-operative banking is concerned, three

is hereby given that the Board of Directors of the above Company have decided to pay an Interim Dividend of Rs. 1-8-0 per share equal to 3 per cent. free of Income Tax for the year ending 31st December, 1933, on all issued shares of the Company and that such Dividend will be paid on 7th October, 1933, to the shareholders appearing on the Register on that date by warrant posted to such shareholders.

The Transfer Books and Register of Members of the Company will be closed from the 25th September, 1933, to the 7th October, 1933, (both days inclusive) for preparation of Dividend Warrants.

By Order of the Board of Directors,
R. H. Parker.
General Manager & Secretary.

OLYMPUS

(From Our Correspondent)

Simla, Oct. 3.

Simla Conference: Japanese unwilling for a tripartite conference: Negotiations to be between two parties at a time: Indian mills interests and cotton growers' interests reconciled: Japanese delegates united and strong: Cards not placed on the table by parties:

There was a great flutter yesterday in the camp of the Indian Mill delegates as they found that Japanese delegates were not anxious to have a tripartite conference. I am told that a protest was lodged with the Government of India either formally or informally on the subject and that the position has slightly improved as a result of that.

The contention of Mr. Mody is that the three interests were a party to the plan of a tripartite conference and that the Government of India gave their blessing to the scheme because the Viceroy, in his address to the Legislative Assembly on August 30, mentioned that there would be such a tripartite conference in which the Government of India will not take part but whose conclusions, if they were in the general interests of the country, would be given effect to.

It seems that, originally, the Japanese were not anxious to have any such conference and wanted their negotiations to be conducted with the Government. But, later on, they modified their position and became a party to the scheme of a tripartite conference.

Could they back out of it now? Mr. Mody who was the prime mover in the scheme was naturally indignant. But he had the backing of the Lancashire people so that it was clear that some move would have to be made in the direction of honouring that understanding.

The contention of the Indian millowners is that the Japanese hope to coax better terms from the Government of India than through a conference of industrial interests; and that, for that reason, they were anxious to have nothing to do with the industrial conference as such.

The Indian millowners and the Lancashire people think that when the Japanese meet them face to face, they would not have the same advantage which they would have when they deal only with the Government of India whose representatives are not businessmen.

The result is that a compromise has been arrived at. There will be no tripartite conference but there will be conferences of two parties at a time and in rotation each party will be able to meet the other. And they would call it tripartite!

Indian mill interests and cotton growers' interests are being reconciled. There have been talks between their representatives here and it is said that both sides are agreeable to taking a united stand. If that happens, it would strengthen the hands of the Government of India to strike a really good bargain.

In fact, it is clear by now that the Japanese delegates would agree to putting into the Indian market a fixed quota and that that quota would be determined by the needs of Indian industry. But the field that would be left by Japan would have to be divided between Lancashire and India. How is this division to take place? That is going to be a difficult question.

There is the question of protection. Indian mill industry must have adequate protection which means that it would try to capture all the field it can and Lancashire can have only a small share. But if prices are fixed or put on a level between Lancashire and India, then protection goes by the board.

Further, Lancashire cannot guarantee what quantity of Indian cotton they can consume. Anyway it seems they will be able to get some agreement in return for promising colonial markets. What compensation those markets will yield remains to be seen.

So far, no party has yet put its cards on the table but these will not be kept back for long. Already the official conversations have started, with a view to determine the sphere of Japanese goods in India in respect of textiles.

The impression one gathers is that the Japanese delegates are working as a very united and strong team and they hope to get the best out of the present negotiations. They have not only monopolised every available room in the Cecil, putting everyone else out of court; but they occupy a large space in the negotiations and mean to maintain a strong position.

The Indian mill interests were divided in Bombay but their conversations in Simla have led to some understanding so that Bombay, Ahemedabad, Delhi and Cawnpore millowners can now take a joint stand and Mr. Mody has fallen into line with them.

SOUTH INDIA

(From Our Correspondent)

Madras, October 4.

We have not, on our side, anything like the festivity or langour of your Puja holidays. Bankers and businessmen could not think of a week's rest in this part of the year. No Puri seaside attractions for them. Just the same, stale Adyar beach. Business has been getting along in the slow routine, humdrum style which is characteristic of this city.

One of our really important festivals is the Deepavali. Note the spelling. It is a punctillious way of spelling what our Bombay friends refer to as Diwali. In old days, considerable sales of cloth would be effected on the eve of this autumn-end celebration. Manchester used to have a flourishing trade. 1703 was a kind of mull made by Manchester and consumed by Madras in large quantities. 1703 has practically disappeared from the scene. There was another brand of cloth known as Glasgow mull which was purchased by aristocrats. Even this is out of vogue.

Those who used only 1703 in 1903 wear thick homespun khaddar in 1933. It may be said that, in this Presidency, a large part of the sales of cloth in the Deepavali season is now in the form of khaddar.. Ahmedabad mills are popular for their style of *dhooties* manufactured to suit Madras tastes. Godown Street which used to hum with life when foreign piecegoods trade was brisk has now a deserted look.

Even the fashion of ladies has changed. The feminine wear in middle-class and rich families used to be costly *sarees* in silk manufactured in Bangalore or Conjeevaram. Artificial silk *sarees* and even cotton *sarees* have taken their place.

It is, perhaps, all for the best that these changes in popular tastes have occurred. There is really great economic distress, especially in the rural padts. If fine mull and costly silk should be the wear sought after for Deepavali, many a family, in its reduced circumstances, could not stand up to the expense. What is a change of fashion is really a change suggested by, and suitable to, the changed purse.

While, in the economic field, we have not made a brave showing, three of our important institutions have gone ahead—and this is a circumstance of which we have cause to be proud. The Indian Bank, the Madras Provincial Co-operative Bank and the United India Life Assurance Company are three institutions that have advanced from strength to strength, especially in the last five years.

A sign of the progress of the United India is furnished by its erecting its own building in Calcutta at a cost of Rs. 5 lakhs or thereabout. I understand that the United India has been lucky enough to get tenants for all its floors fixed up even before it had approved of the architect's plan. It is to be hoped that this can be taken as a happy augury for its future success in the Bengal territory.

Mr. V. C. Rangaswami, the Secretary of the Madras Provincial Co-operative Bank has prepared an important memorandum on the Reserve Bank of India Bill in relation to provincial co-operative banks. To Mr. Rangaswami belongs the entire credit of having made a comparatively insignificant institution into a powerful and rapidly growing provincial bank. He has been connected with the Bank from the beginning. He is in touch with the co-operative movement throughout the province. His views are, therefore, entitled to respect and careful attention.

In the course of the memorandum, Mr. Rangaswami recalls that the 1928 Bill gave the Provincial Co-operative Banks representation on the directorate of the Reserve Bank. There is every cause for the revival of this provision.

Dealing with the business that the Reserve Bank may transact, Mr. Rangaswami has made an important suggestion.

> So far as the Provincial Banks are concerned, the Reserve Bank is authorised by clause 17 (2) (b) to sell, purchase and rediscount bills of exchange and promissory notes bearing the signature of a Provincial Co-operative Bank drawn or issued for the purpose of financing seasonal agricultural operations, etc., and by sub-clause (4) (c) of the same section to grant loans or advances against the security of promissory notes of a Provincial Co-operative Bank supported by documents evidencing title to goods, etc. These provisions are good so far as they go. But business conditions of Provincial Co-operative Banks have changed during the last five or six years. With the spread of urban and non-credit movement, the Provincial Co-operative Banks also now deal in bills arising out of commercial or trade transactions, and as years pass, the business in this direction will certainly increase. Further, most of the Provincial Co-operative Banks hold large blocks of Government securities and a certain amount of trading is carried on by them in this line. It is, therefore, suggested that Provincial Co-operative Banks should be brought also within the scope of the provisions of clause 17 (a) and (c) wherein the rediscounting facilities are given to scheduled banks. The exact amendment will run as follows: In sections 17 (2) (1) and (c), after the words, "a scheduled bank" insert, "or a provincial co-operative bank."

(*Continued from page 842*).

names stand out prominently: (1) Mr. Ramdas Pantalu; (2) Mr. V. C. Rangaswami and (3) Mr. V. L. Mehta. It would be useful to have two of these gentlemen invited as co-operative conditions vary in different provinces.

Now that the trade discussions are proceeding in Simla, special importance attaches to the resolutions passed by the committee of the Indian Merchants Chamber at their meeting this week. The first resolution urges that apart from the cotton textile industry, the following important industries are affected by Japanese competition:

> Soap, Leather goods, Hardware, Glassware, Boots and shoes, Electric bulbs and Shipping Industry.

The committee points out that these industries are in a condition of infancy and hence require even much greater protection than industries which have been established for so long a time.

The committee is skating on thin ice when it suggests that Indian agriculture also stands at present threatened, if the boycott of Indian cotton is going to be continued and that it is essential that the interests of the Indian agdriculturists should be safeguarded, so that they may not suffer. It is admitted that the claims of industry and agriculture appear conflicting but the committee fight shy of a solution which will reconcile these claims.

In the second resolution, a general warning is given in regard to the acceptance, without proper scrutiny, of the demands of the British delegates.

The third resolution urges that any settlement arrived at must be subject to public criticism before it is ratified.

In the fourth resolution, the committee expresses its opposition to the suggestion of dividing the foreign trade of this country and assigning to any country abroad any definite quantity or quota.

On the whole, at a time when critical discussions are going on, the committee has done well by passing resolutions which are of a more or less vague character and which cannot cause any embarassment. Nevertheless, it is to be deplored that no definite lead has been given.

GREAT BRITAIN

THE THIRD YEAR OFF-GOLD

With September 21, England completes the second year since her abandonment of the gold standard. And there is, surely, something disquieting in the thought that the two years have not sufficed either to simplify the problems connected with money and exchange or to render Britain's position comfortable and secure. In one respect, it may be said that the position has become even more uncomfortable than it was in September 1932. For it will be remembered that at about this time last year Britain was happy in the consciousness that she had availed of the changed conditions following the abandonment of the gold standard to bring about that degree of monetary ease which could enable her to convert the national debt into a basis of more favourable rates of interest. And she had had time to note the advantages which Britain could enjoy as a result of the depreciation of sterling. But in September 1933, though Britain had not been deprived of her past benefits and triumphs, new elements of instability have developed; and the situation today is unquestionably more complicated and embarassing than even during the time when the palpable overvaluation of sterling was straining the entire edifice of British economy and finance. The abandonment of the gold standard by America and the increasing uncertainties attending her monetary and exchange policies, consequent on the dubious prospects of the Recovery administration, render it impossible for Great Britain any longer to continue the policy of drift in regard to her currency and exchange.

Increasing complexity

The British genius for compromise had, in the middle of the year, enabled the authorities to strike an unexceptionable *via media,* by which, without commiting herself to a stable link with gold, the exchange value of sterling could be protected from any serious vicisssitudes. By the time the second year of this Off Gold Era was completed, the stable link with the franc has had to be virtually abandoned. The last fortnight of the year was a period of grave disturbances in the foreign exchange markets. The hopes that had been entertained earlier consequent on the recovery of the dollar after its sinking to its old sterling dollar parity had been dispelled; talks of inflation filled the air on the other side of the Atlantic, though it must be added there was reason to think that President Roosevelt himself was anxious to avoid inflation; there was a wholesale flight into the franc through the London market and the sterling-franc rate broke off from its moorings heading along an apparently serious downward trend.

Via media no longer possible

The authorities have, as a result of these developments, been deprived of the benefits of a working policy which they had chalked out for themselves and which had served them well in spite of its obvious lack of theoretical outline.

Such a policy may be easily explained as one of preserving a stable link with the franc coupled with attempts to prevent any serious deterioration. Both the wings of this policy have now been clipped, and it is now as urgent a question as in April 1933, when America had just abandoned the gold standard, whether sterling would be allowed to follow the dollar to any depths it might choose to fathom.

For the present, one has to note that the link with the franc has been definitely abandoned. For during the first week of weakness in the sterling franc rate, the control made no determined efforts to prevent the decline. Not that it adopted a masterly inaction for it is found that from time to time sales of francs were effected on behalf of the control but such sales were carried out only with the object of sounding the position and estimating the strength of the current against sterling.

Link with Franc broken

In this abandonment of the sterling franc rate the prime considerations can be easily gussed.

Firstly, it was not part of an avowed, and, therefore, binding, policy of the authorities. The Government, at any rate, had all along asserted that it was not their policy to maintain a stable link between sterling and gold and that, if the sterling franc rate remained comparatively stable during a long period, it was more the result of particular actions on the part of the Bank of England than as a result of a deliberate policy of the Government.

Secondly, even if the Government had inclined towards the maintenance of the sterling franc rate, it was never their intention to waste the resources of the Exchange Equalisation Fund in an effort to counteract the seasonal depression of sterling.

Thirdly, the decline in the sterling franc rate in the present instance has been the result of a large-scale flight into the dollar.

For, the prime motive of this movement is the lack of confidence in the dollar leading to sales of American securities and purchase of francs with the proceeds thereof. It is conceivable that these transactions should be put through without any adverse effects on sterling if the American exchange markets had afforded facilities for buying francs and other Continental currencies. As London is the only market in the world with such extreme diversification of foreign exchanges all the transactions have been put through it ; and hence the cumulative adverse effect on sterling. When the depression in sterling is the result of factors with which the commercial or financial position of Great Britain has little to do and over which the authorities in Britain have no control whatsoever, it is only understandable that the authorities should allow the exchange to itself, without wasting the resources of the nation in an apparently futile effort to maintain the external value of sterling at a high level.

No fear of Franc devaluation

It should, perhaps, be pointed out that the present flight into the franc has not been impeded by any consideration of the fate of the franc itself. There was, no doubt, a time when the possibility of France abandoning the gold standard and depreciating her currency was considered imminent. But such fears are not now entertained, at least so far as the immediately succeeding months are concerned. The circumstances that tended to raise such fears were, firstly the increasing difficulties of the French national budget generally and particularly of financing the ways and means position of the Treasury. Secondly, the reactions of French opinion to the manifest impossibility of coming to any early agreement either with Great Britain or with the United States of America in regard to the stabilisation of the exchanges. Thirdly, the natural feeling that France also might attempt to scrap the handicap on her export trade by a devaluation of the franc.

As regards the first, though Parliament is still indifferent to the question of balancing the budget and though the present estimates for the next year point to a deficit of nearly 6 milliards, it is of no small significance to the short view that it is no longer difficult for the Treasury to finance its own requirements. The importance of this fact lies in that it was originally feared that, because of its inability to find the funds required for the ways and means position, the Government might be tempted to bring about an abandonment of the gold standard. Now that that incentive is not there, and the danger of bear raids on the franc is gone, the view is rightly taken that the fear of a deflation of the franc

Air Mail Week

might be put off to at least the beginning of the next calendar year. It is in this firm hope that the flight of the franc is now taking place, with its obvious consequences on the exchange value of sterling.

Inflation to the fore, again

Apart from these questions of transitory interest, what disturb the minds of the Government to-day is the need for giving the country a clear-cut programme of monetary and economic reform, on the strength of which the public could feel assured that it could wriggle itself out of the depression without any undue dependence on the world situation. On the monetary side, the only pressing problem, therefore, is inflation. The inborn conservatism of the British public is, no doubt, against any sensational changes in monetary policy. But that conservatism has been disturbed sufficiently to induce the people to desire for some liberalisation of credit.

And in this, as in so many other matters, British opinion inclines to a *Via media* between, on the one hand, the obstinate deflationism of the gold standard countries and, on the other, the reckless inflationism of the United States.

August Trade Figures

The August trade figures show a welcome improvement both on the figures of the previous month and on those of the corresponding period last year. Retail imports showed an increase of £3.1 million on July and £2.7 million on the corresponding month of last year. British exports amounted to £31 million as compared with £29.8 million in July and 28.6 million in August, 1932. The following table shows the trade figures on the usual bases of comparison:

Month of August

(000's omitted)

	1933	Increase or Decrease as compared with August, 1932		August, 1931	
	£	£	%	£	%
Imports ...	56,754	+3,432	+6.5	−8,527	−13.1
British Exports	30,997	+2,445	+8.5	+1,860	+6.4
Re-exports ...	4,300	+809	+23,2	+450	+11.7
Total Exports	35,297	+3,254	+10.1	+2,310	+7.0
Excess of imports over total exports ...	21,457	+178	+0.8	−10,837	−33.6
First Eight Months					
Imports ...	430,285	−35,664	−7.7	−122,809	−23.2
British Exports	236,179	−8,700	−3.6	−26,366	−10.0
Re-exports ...	33,775	−2,352	−6.5	−10,720	−24.2
Total Exports ...	269,954	−11,052	−3.9	−37,085	−12.1
Excess of imports over total exports ...	160,331	−24,612	−13.3	−85,724	−34.9

The General Secretary,
E. I. D. Branch,
3 & 4, HARE STREET,
CALCUTTA.

The Manager
Head Office.

The general outlook of industry may be seen from the improvement in the value of the retail imports of raw materials from £12.6 million in July and £10.3 million a year ago to 14.3 million in August 1933. It must be remembered, however, that part of this increase is attributable to the increase in prices of the principal primary products. Imports of manufactures are better at £12.1 million as compared with £10.9 million in July last. Considering the export trade item by item it is found that the expansion in exports is not by any means well spread over all the principal lines. All classes of woolen goods have shown a consistent improvement during the last three years. Motor cars have nearly doubled themselves in the first eight months of the year as compared with the corresponding period of 1931. Linen piecegoods and leather have also participated in the general improvement. But the decline in the exports of coal and cotton piecegoods continue unchecked. For the eight months of 1933 only 25.4 million tons of coal have been exported as against 26.3 million in 1932 and 28.0 million tons in 1931. Textile and other machinery are still on the downward trend while iron and steel shows a mild improvement as compared with 1932 and is still very low as compared with 1931.

Iron and Steel Production

Though exports of iron and steel show a decline as compared with the previous month, iron and steel production in August has been well maintained at about the level of July in spite of the holidays during the month. Pig iron production actually showed an increase while the setback in steel was restricted only to 3%. The number of furnaces in blast continues to be the same as at the end of July and it is expected that in the coming months there will be a considerable improvement.

UNITED STATES OF AMERICA

N. R. A. STRUGGLES THROUGH

The fortnight, which falls to be reviewed in these columns, has not been altogether eventless. Though there have been no sensational developments, such as to enable conclusions on matters on which the public have reserved judgement, there has been no stagnation. Every problem facing the Administration has passed during this fortnight into a distinctly more critical phase. But equally has there been more intensive struggle and progress towards the goal without, however, any appreciable clarification of the solutions which are to be adopted ultimately. The above can perhaps be explained only in the light of specific instances. Taking the relations between labour and the employers and the Administration, there can be no doubt that labour is becoming increasingly bellicose and aggressive.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympethetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

Air Mail Week

There have been threats of country-wide strikes, in order that the Administration may be brought to support the claims of labour more effectively and enthusiastically and to coerce recalcitrant employers into accepting codes containing clauses assuring labour of a distinctly liberal treatment. In the coal mines of Pennsylvania strikes actually occurred, attended by such serious disturbances to the public peace that the authorities had to open fire and heavy and numerous casualties were occasioned. At the end of the period under review, Mr. William Green, the President of the American Federation of Labour, said in a public speech that, if before the winter a substantial portion of the 14 million now unemployed is not reabsorbed into industry at rates of wages ensuring the maintenance of consumptive demand at a level in consonance with the increasing production, he could not answer for the consequences. Mr. Green is, if anything, a less militant spokesman of labour interests than others. There can be no doubt that, if the pace of acceptance of voluntary codes should continue for further period, the relations between employers and employees and the peace of industry and the country as well would be gravely endangered.

Administration Pacifies Labour

While these developments are distinctly disquieting, it is necessary to note that the code for the coal trade has been at last formulated and signed by the parties concerned. At the same time, Mr. Roosevelt is showing a determination that the replacement of the blanket codes by a voluntary specific code should be completed without any further delay. To this end he called General Johnson for a consultation in the White House ; and it was announced that the imposed codes would come to an end by October 1st and that industries must do their best to see that voluntary agreements are brought into force by that date. Again, here, the Administration is inclined to the view that they must do their best to avoid the compulsory imposition of codes in order that there might be no risk of being run into courts for unconstitutional action. The Administration will, doubtless, make vigorous efforts to pacify labour ; and General Johnson has already taken a campaign to enforce compliance with the codes. Compliance Committees, according to the present ideas, are to be set up in every city of the country and complaints about the failure of employers to live up to their codes are to be brought before them for hearing. Action is also being taken against concerns which raised prices unduly. Mr. Peak, Chairman of the Adjustment Administration and Mr. Howe, President of the N. R. A. Consumers Council have issued a threat of prosecution against offenders under the Industrial Recovery Act which carries heavy penalties. Mention was particularly made of certain textile groups which were said to be "gouging."

Rate-War in Oil?

The same kind of mixed situation rules in the oil industry also. Early in the period under review, Mr. Ickes announced that the Committee of 15, which was appointed by President Roosevelt and of which he is the Chairman, is watching the oil price situation carefully and would not have any hesitation in intervening if the companies effected undue advances in price. At that time, there was reason to hope that we had seen the last of the oil price war and that the companies would settle down to the collar. It was in these hopes that gasolene prices were increased and that the Standard Oil Co. of New York Colonial Beacon and the Atlantic Refining Co. raised the tank wagon to service station price. But later it was found that California had gone back to its old tricks and that as a result the price war has been started again. The war might easily extend from gasolene to crude oil prices as well. All eyes are fixed on Washington to see whether the autho-

Air Mail Week.

rities would have resort to price fixing as a means of correcting the situation. But it is recognised that the path of the Administration is far from smooth. For they have to reckon with the statement of the Texas Company made to Mr. Ickes, the Secretary of the Interior, that the company was still opposed to any form of price-fixing, "which is not only unconstitutional but uneconomic as well." The company expresses the view that, if the situation now prevailing in the oil industry and trade is satisfactory, it should suffice if the State brings about a scheme of adequate restriction of output and that price-fixing would be utterly unnecessary to correct the prevalent situation. What is even more important is that the company has blankly refused to supply any data that might be necessary for the administration to fix the prices under any scheme.

Mr. Ford Relents?

The practical significance of Mr. Ford's refusal to join the automobile code is daily dwindling. In the first place, he has announced that his production schedule in August will be maintained in September in spite of the fact that September usually shows a seasonal slump. It has also been announced officially by the company that it is about to increase its pay roll of 50,000 in the Detroit area by taking on an additional 300 a day until the total reaches 55,000. Needless to say, the company is anxious that this should not be interpreted as showing weakness to an Administration which is determined that Mr. Ford's refusal in signing the automobile code should not endanger in any way the success of the recovery programme. Officially, the company is reported to have said that this step was due to the expansion of production and not to the operation of the National Recovery Act. It is of significance that even the Ford Company is able to translate into its policy the spirit of the Recovery Administration and that therefore the pother that has always been made about the recovery programme foundering on the rocks of Ford's recalcitrance ultimately comes to nothing.

Mr. Norman goes back

The same indeterminate course of events, but with the pointers directed to ultimate solution, holds good also in the case of the major monetary problems. The period under review closed with the exit of Mr. Montagu Norman from the American stage. It is now widely understood that Mr. Norman's proposals were turned down some what unceremoniously and that thereafter there can be no doubt that the Administration is not in the least prepared to entertain proposals in regard to the stabilisation of the exchanges. But this in no way dispels the uncertainties attaching to the current monetary and exchange policy. On the one hand, the Administration is engaged in its tussle with the bankers attempting to persuade them to render the heartiest and sincerest co-operation in the task of providing industry the means of carrying on during the period of inevitable gap between increased production costs and prices.

Inflationist Pressure

On the other hand, Senator Thomas the author of the Inflation Amendment has been carrying on an intensive campaign in favour of inflation and further depression of the exchanges. The method of carrying on the campaign is somewhat strange. He has circularised to all the members of the Congress asking for their opinion on what he considers to be the outstanding question of definite inflation versus monetary drift. It is understood that Senator Thomas has received replies which are overwhelmingly in favour of inflation and is therefore in a position to utter a threat to the Administration that, in case they fail to take necessary action, inflation will be carried out by the Congress on its own initiative. Mr. Roosevelt should, undoubtedly, know what this threat of Senator Thomas means. Though politically it would be necessary for the President and his advisers to placate such influential sections of Congress as those represented by Senator Thomas, there can be no doubt that President Roosevelt in his mind is certain that inflation, such as is being advocated by Senator Thomas, is neither advisable nor expedient in the interests of the recovery campaign. He has, therefore, concentrated his attention on devising means by which industry will have increased resources to carry on during the transitional period. He has made clear on more than one occasion—and he does not fail to avail of any opportunity for stressing this viewpoint—that what is needed is credit expansion more than money expansion. His efforts to induce the Reconstruction Finance Corporation to lend directly to industry ended in inevitable failure.

R. F. C.'s indirect Lending to Industry

It is well known that under the legal provisions within which the Reconstruction Finance Corporation is functioning it is not entitled to lend directly to industry. It, therefore, remains for the President to devise other means ; and the two expedients which he has adopted are (1) enabling small banking corporations to liquify their position by making some of their securities which were formerly in favour of depositing in Finance corporation eligible, and thereby bringing the major part of the banking system of America under direct State control and (2) the Reconstruction Finance Corporation has itself been induced to make an offer to banks, that the Corporation will make loans to banks, trusts, mortgage companies of 3 per cent. for any part of six months. The money is to be re-lent by banks to industry.

Air Mail Week

This provision is necessary because, as has been said already, the Corporation is not empowered to lend directly to industry. With the resources thus made available, the banks are asked to re-lend to industry at the rate of 5 per cent., a margin of 2 per cent. being an adequate incentive to engage in the suggested operation. Thirdly, it has now become the role for the reserve banks to buy 35 million dollars of government securities every week.

Stock Exchange moves from New York to New Jersey

One of the most important developments that took place during this fortnight is the movement of a part of the New York Stock Exchange to New Jersey. This has been rendered necessary by certain taxes which the City administration has imposed on the stock exchange. The authorities of the Exchange including Mr. Whitney, the President, lost no time in voicing a firm protest against the contemplated measure and the President even went to the length of threatening the authorities with the transference of the activities of the exchange to New Jersey, if the administration should persist, in handicapping the activities of the exchange. Apparently the municipal authorities thought they were calling off the bluff when they finally passed the proposals into law. As a result, the National Stock Exchange has been formed in New Jersey ; and it is believed that influential firms are supporting the move and that the greater part of the active securities have been listed in the new stock exchange and large-scale transactions have been put through in the new institution.

Perhaps the most hopeful feature of this period is the intelligence that at long last the Federal Government is in sight of a balanced budget. The Treasury surplus so far comes to about 31½ million dollars and this is naturally contrasted with a deficit of 11½ million dollars for the same period last year. The receipts from income tax have been most encouraging as a result of the success of the recovery administration in bringing about increases in wages and salaries. It is reported that for the month ended August 15, industrial pay rolls increased by 12 million dollars.

Business Reports

Business reports continue to be indeterminate.

Three-quarters of a million unemployed are estimated to have returned to work in August, largely as a result of President Roosevelt's drive for shorter hours auccording to Miss Frances Perkins, the Secretary for Labour.

She estimated that some 2,200,000 unemployed have returned to work since the black days of March, when all the banks in the country were shut and there were about 13,000,000 unemployed.

The increase in weekly payrolls since then is put at $40,000,000, a rise of 55.4 per cent. Weekly payrolls in 89 principal manufacturing industries are estimated to have increased by about $12,000,000 in August alone. The rise in employment in August compared with July, is put at 6.4 per cent., and in payrolls at 11.6 per cent.

However, Miss Perkins warns that these figures should not be received too complacently, since employment is still 28.4 per cent. below the "normal" average of 1926, and total payrolls are even lower, being 48 per cent. below the level of 1926.

The August employment index is the highest for more than two years, the payroll figure being the highest since December, 1931.

The largest increase in employment is the seasonal gain of 55.2 in the beet-sugar industry. The locomotive industry reports a gain of 32.9, and an increase of over 20 per cent. is reported in the confectionery, millinery, textile machinery, and typewriter industries.

Prices and production are making some progress. U.S. production of manufactured goods in the first seven months of the year was about 16 per cent. higher than in the corresponding period of last year.

Wholesale prices in August advanced slightly. The index for the month at 69.5 (1926 equals 100) shows an increase of 1 per cent. compared with July.

Motor-car companies are deferring announcement of their 1934 models owing to the heavy volume of sales of the existing models.

Rubber Stocks Down

Rubber consumption in August at 44,900 tons, compares with 50,184 tons in July. Consumption of reclaimed rubber was also lower by about 1,000 tons at 9,400 tons. Arrivals were about 500 tons up, stocks were down about 1,000 tons, and stocks afloat were down 4,000 tons.

Car-loadings for last week at 571,400 cars showed a decrease of 95,300 cars from the previous week, but an increase of slightly under 70,000 on the corresponding week last year.

The crop estimate of the Department of Agriculture for September 1st gives a maize crop of 2,285,000,000 bushels, against 2,273,000,000 bushels on August 1, a wheat crop of 507,000,000 bushels, against 500,000,000 bushels, and an oats crop of 688,000,000 bushels, against 667,000,000 bushels.

finance are unchanged, there will probably be an even longer procrastination over the 1934 budget than over its predecessor. For the financial problems facing the Government and country are, if anything, even more severe. The experiences of the first seven months of 1933—in the case of France the financial year coincides with the calendar year—show that revenue had been considerably over-estimated. Expectations raised by the improved returns during last summer have not only not been fulfilled but serious shortages are now visible. For the first seven months of the year, the shortage of realisation from estimate comes to as much as 1,040 million francs. Income Tax arrears are three times as high as in 1932. And at the present rate 1933 deficit might well be on the wrong side of 4 milliards. As for 1934, it is well known that shortly before the Chambers rose for the recess M. Cailleaux estimated the 1934 budget deficit at 7 or 8 milliard francs. The most hopeful estimates are not below 6 milliard francs. It remains to be seen whether the French Chamber will face up to the task of balancing the budget by effecting the necessary economies in expenditure and by bringing up the revenue to the requisite level. The only improvement in the situation taken as a whole is that the Government will be facing the Chamber with the confidence that its popularity both in the country and in Parliament, has been on the increase in recent times owing to the bold stand which they took in the World Economic Conference on behalf of gold.

Treasury Borrowings

Perhaps the Government are less worried by a prospective deficit of 4 milliard for 1933 and 6 milliard for 1934 than by the immediate difficulties of the ways and means position of the French Treasury. The difficulties of the Treasury arise mainly from M. Moret's interpretation of the law of 1928 which set a limit to the accommodation which the Bank of France might make to the Treasury at the level of 3,200 million francs. The Governor has decided that in as much as the limit has been reached it would not be legal for him even to rediscount any more of French Treasury Bills as such action would be tantamount to transgressing the limit imposed by law. It is not to be expected that banks would invest largely in the short term debt of the Government when they are sure that the central bank would not extend rediscount facilities in regard to these scrips. The situation would have been more difficult for the Government if the loan which they issued at the beginning of August had not brought them the much-needed 3,200 million francs. This, in addition to the 5,200 million francs issued in March last, leaves only 1,600 millions of the 10 milliards which the Government have been allowed to borrow from the market. The Government would be glad to make fresh issues but that the state of the bonds market, as seen in the fall of the 3 per cent. *rentes* from 85 to 66, is hardly encouraging. The attitude of the general investor to government securities, however, has distinctly improved ; and it is believed that a considerable part of the last 2,000 million franc Loan issued in March came from small hoarders.

Is the Franc Overvalued?

It is common knowledge that the difficulties of the French Treasury have an intimate bearing on the attitude of the world towards the safety and integrity of the French franc. It might seem strange that a country, whose gold reserves at one time actually exceeded the total note issue, should subject its national currency to vague fears of forced deflation. There can be no denying that, if the difficulties of the budget are on the increase without any visible sign of the Chamber being more ready to tackle them in the proper spirit, the deflation of the franc would be regarded as a way of escape, too tempting to be easily forsaken. Besides, the point is being slowly reached, when the French Government has seriously to consider the question whether after all the franc has not reached a stage of considerable overvaluation. It is true that at the time the present depression started, France had so far undervalued the franc that she could afford for some time to look with unconcern at what to the rest of the world was a disastrous decline in commodity prices. But now a comparison of the fall in wholesale prices and cost of living in the principal countries of the world would show that the franc has reached the point of over-valuation and that hereafter, she will have to consider the co-ordination of economic policy.

New Commercial Policy

Considerations like these have, perhaps, led M. Serre to announce the new economic policy of the French Cabinet. The beginning of it consists in the announcement that after October 1st, the import quotas will not be renewed wholesale, but that only a quarter thereof will be licensed, the remaining three-quarters being subject to negotiations on a reciprocal basis. France has always had, in addition to unilateral quotas, what is called *contingentment amiable*, a system of negotiated quotas with the quantities fixed by Governments after negotiations among the producers concerned and operating on the basis of certificates delivered to specially designated organisations either in France or in the country of origin. This system grew out of the work of the Franco-German committee set up in the autumn of 1931. This system also inspired the negotiations of the French Delegation in the World Economic Conference. And now according to M. Serre, the French Minister of Commerce, the time is come when France must seek a new commercial policy and trade *rapprochements* between gold standard countries. The announcement has naturally caused disquiet amongst British exporters. And with a view to allay such disquiet, M. Serre pointed out that "by our recent decision we are not seeking to create new quotas but to destroy those in excess so as to obtain appreciable compensations. The work of a new export policy must be seen in this move opening up possibility of obtaining immediate advantages from certain countries, of finding new outlets and of establishing between nations on the gold standard a desirable *rapprochement*." It has also been revealed that commercial negotiations had already begun with Italy, Soviet Russia, Holland, Belgium and Poland to arrive at an agreement which will facilitate trade.

BANKING AND CURRENCY REFORM IN AMERICA

A PEEP INTO RECENT CHANGES

We wish to make it clear at the outset that this article is not intended for American readers, who may be presumed to need no informing on the subjects with which it deals. It is designed to clarify, so far as may be with the information at our disposal, a series of developments which to the non-American are obscure. Two reasons account for his confusion: first, events have moved so rapidly during the past half-year that it is impossible from personal recollection to place them in proper perspective; and secondly, a number of important changes in banking and currency arrangements have been effected by amendments to Acts of Congress to which they have no close relevance. We propose, therefore, to endeavour to answer a number of questions, which may be summarized thus: What recent alterations have occurred in American banking structure and methods, and in what respects do the currency system and the monetary standard differ from those in operation six months ago?

Emergency Banking Measures

It will be convenient to deal with the banking changes under two heads—taking our cue from the World Conference—covering on the one hand immediate, short-term measures and on the other longer-term or permanent changes. We shall then pass on to measures designed to assist economic recovery, and finally to the position regarding the monetary standard and the external valuation of the dollar. Most of the emergency measures were concerned with the task of re-starting the banking system after the disorders of February and early March; but one which occurred before that time must be mentioned, though it was related more directly with efforts to alleviate the business depression. The "Glass-Steagall' Act of 1932 broadened for one year, to March, 1933, the powers of member banks of the Federal Reserve system to borrow from the Reserve Banks, and liberalized the provisions regarding the issue of Federal Reserve notes by granting eligibility, within limits, to United States Government securities as authorized note cover. Under this Act, the Reserve Banks bought large quantities of securities and provided the basis for a marked increase in member bank cash reserves, though for various reasons the process failed to bring about any proportionate increase in the volume of bank deposits. We mention this Act only to record that, in view of its beneficial effect in easing the position of member banks, its provisions were extended last February for a further year.

As is well known, however, this measure did not prevent a major crisis. Following partial or entire closures in various states, which increased the strain in the leading centres where the banks remained open, the Presidential proclamation of March 6, issued under the authority of a war-time Act, declared a national bank holiday until March 9, and authorized the Secretary of the Treasury to re-open banks at his discretion. A few re-opened for restricted business during this period, but it was found necessary to extend the holiday, and the majority remained closed until March 13, when plans for an orderly resumption of business were put into operation. Meanwhile an Emergency Banking Act was quickly passed and became law on March 9. This Act re-affirmed the Presidential proclamation, and conferred on the President autocratic powers over the whole banking system. Member banks were forbidden to carry out any transactions not approved by the Secretary of the Treasury and the President, while provision was made for the appointment of "conservators" to undertake re-organization or winding-up of insolvent banks. National banks were authorized to issue preferred stock, which hitherto had been prohibited, and the Reconstruction Finance Corporation, formed in 1932 with the primary object of preventing bank failures, was empowered to purchase such stock for re-sale in the open market or to make advances against it. The powers of the Federal Reserve Banks were greatly increased: first, by permission to issue notes, distinguished by the title Federal Reserve Bank notes, against a pure paper backing; secondly, by authority to make loans to member banks even though no assets were available which fell within the definitions of eligibility previously laid down; and thirdly, by permission to make advances, secured by Government obligations, to any individual, partnership or corporation, instead of solely to member banks. A later amendment to the Act gave power to the Federal Reserve Banks to extend direct loans to non-member State banks and trust companies.* The time limits on these various provisions differed from clause to clause, being mainly dependent on the President's decision, not yet given, as to the duration of the emergency.

The machinery of the Act was speedily put in motion. The Secretary of the Treasury was empowered to issue licences to member banks to enable them to re-open, while State banking authorities were requested to co-operate with the Treasury by gradually licensing sound State banks to resume business. Banks throughout the country were rapidly re-opened after March 13, the only restrictions on their operations being prohibitions against gold payments, currency withdrawals for hoarding and exchange transactions for irregular purposes. By the end of March nearly 13,000 banks, out of a total of about 18,000, had received unrestricted licenses, while the rest, mainly State banks and trust companies, were still either closed or working on a restricted basis. Re-opening later proceeded more steadily, and, although full figures for a more recent date are not available, it was authoritatively stated towards the end of June that, out of deposits of $44,000 millions in banks closed during the holiday, all but $10,000 millions had been released. It is evident, therefore, that a vast quantity of purchasing power is still immobilised in closed banks. Moreover, it seems likely that a large number of these banks (probably between 3,500 and 4,000 are still without licences) will never re-open, but will be liquidated with some inevitable losses.

Long-term Banking Changes

Passing now to more permanent measures, designed to prevent a recurrence of banking upheavals, we must endeavour to summarize the main provisions of the "Glass-Steagall' Banking Act of 1933, which became law on June 16. This Act, which should not be confused with the earlier "Glass-Steagall" Act already dealt with, added, on a rough estimate, 20,000 words to the already enormous bulk of banking legislation, comprising forty-nine separate codes, any two of which may apply to any one bank. A main feature of the Act was the institution of a system of guaranteeing deposits. A temporary insurance fund is to be formed within the next six months, financed jointly by the Treasury, the Federal Reserve Banks and the participating banks, which will guarantee individual deposits up to $2,500 in all the banks taking part. The fund is to be converted in July, 1934 into a permanent Federal Deposit Insurance Corporation, which will guarantee individual deposits at its member banks fully up to $10,000, and in prescribed proportions beyond that figure. All Federal Reserve member banks must participate, as to contributions and benefits, in both the fund and the Corporation; non-member banks may join the fund, but may remain within the Corporation only if they become Federal Reserve members before July, 1936.

*We may remind readers that national banks, that is banks established under Federal law, are bound to be members of the Federal Reserve system, while State banks and trust companies, established under one of the State codes, may or may not, according to their choice and their compliance or non-compliance with conditions regarding, for example, the size of their capital and reserve funds.

This application on a national scale of a principle which has been tried without much success in various individual States was by no means the only innovation in the Act. Under another section member banks were forbidden to pay interest on demand deposits after June 15, while the Federal Reserve Board is empowered to regulate interest rates on time deposits. One result of this provision was an immediate and heavy transfer of balances in New York banks from demand to time accounts. Then again powers were given to the Federal Reserve Banks to supervise the lending activities of member banks in order to prevent undue use of bank credit for speculation in stocks or commodities, and the Federal Reserve Board was authorized to fix for each reserve district the maximum percentage of a bank's capital and surplus which might be represented by loans on stocks or bonds. Moreover, the Act provided for the divorce of security affiliates from member banks within a year, prohibited inter-locking directorates with security firms or stock-broking houses, and forbade personal loans from member banks to their executive officials. The dissociation of security affiliates had already been undertaken, in advance of the Act, by some of the leading banks. Incidentally, the Federal Securities Act which came into effect on May 27 introduced important permanent changes in methods of business in the new issue market.

The general trend of these provisions is clearly towards still further central control over the Federal Reserve system and restriction of the liberty of member banks. In two respects, however, the Federal Reserve Act has been liberalized in favour of national banks. First, the "Glass-Steagall' Banking Act permits branch banking by national banks in any State where it is permitted by State law, under the same restrictions as apply to the State banks. Secondly, the double liability of stockholders in national banks for all debts to customers was abolished in respect of shares issued after the passage of the Act.

At this early stage it is difficult to foresee the effect of the Act on the American banking structure ; some authorities regard it as likely that the deposit guarantee provisions will attract many smaller and weaker non-member banks into the Federal Reserve system, and that some of the more powerful banks may elect to relinquish their national status in order to leave the system. On the other hand, membership of the system does present very solid advantages which the leading banks would presumably be loath to forgo. The main respect in which, to an outside observer, the banking changes have failed to cope with the weaknesses disclosed lies in the almost total absence of any definite attempt to bring American banking into the shape of a structurally cohesive system. The general appearance of a multiplicity of banks, operating under a variety of scattered laws, seems likely to remain unaltered. Incidentally, the business of banking in the United States is fast becoming as much a profession for lawyers as for bankers pure and simple. The mass of legislation enacted during the past session, together with the steady flow of proclamations, executive orders, Treasury and Federal Reserve regulations and interpretations, superimposed upon the huge bulk of already existing bank laws, must have placed bankers in the position of deciding whether what was lawful yesterday is legal to-day. Since the advent of the new Administration no fewer than thirty amendments have been made to the Federal Reserve Act alone, and even the Federal Reserve Board itself might be excused if it felt a little doubtful as to what a Federal Reserve Bank or a member bank can or cannot do.

Changes in the Currency Circulation

While dealing with what seem to be permanent measures, reference must be made to an important change in the currency arrangements. As already mentioned, reopened banks are permitted to exercise their former functions, excluding payments in gold, withdrawals of currency for hoarding, and foreign exchange operations for unauthorized purposes. The last two of these restrictions are probably temporary, and certainly cannot be strictly enforced, but the first bears the marks of permanence. The heavy withdrawals of gold and gold certificates from the banks in the period prior to the general closure revealed the weakness and futility of the kind of gold standard which maintained free availability of the metal to meet internal demands. The revulsion from this system, hitherto regarded as sacrosanct, was complete. All gold and gold certificates in private possession—with minor exceptions, such as gold for industrial use—were called in under threat of heavy penalties, and all gold and gold certificates held by the banks have been centralised in the vaults of the Treasury and the Federal Reserve Banks. On May 31 only $600 millions of gold and gold certificates remained "in circulation", as against $1,220 millions at the end of February and a similar figure a year earlier, and it may safely be said that a substantial part of the $600 millions is for ever lost. Apparently no definite steps have been taken to impose the threatened penalties on individuals still holding gold ; but it seems clear that gold has in effect disappeared from internal circulation and that, if and when the United States returns to a gold standard, it will set up a gold bullion standard similar to that which existed in this country from 1925 to 1931.

Measures for Economic Recovery

So far we have dealt with measures aimed at overcoming the banking emergency, and with those designed to prevent a recurrence of similar troubles. We now have to describe legislation passed with the object of using the banking system as a promoter of general economic recovery. We exclude, from considerations of space, such measures as the National Industrial Recovery Act, the Railroad Relief Act, the principal parts of the Farm Relief Act, and the Home Owners' Loan Act, remarking only that the last two contain provisions for reducing debt charges by substituting new obligations, bearing lower rates of interest guaranteed by the Government, for mortgages and other fixed debts already outstanding. We confine ourselves here to banking and currency measures.

Probably the most important contribution on the monetary side to the President's plans for economic recovery is embodied in the so-called "inflation powers" contained in the Farm Relief Act. The inclusion of clauses such as these in an Act to which they were not specifically relevant is curious, arising from a convenient facility of American legislative procedure ; the "inflation amendment" was incorporated in this particular bill when in course of passage, simply—as far as one can see—to save time. On April 20, when, as will be recounted later, the dollar was definitely severed from gold, the President announced his intention of deliberately attempting to raise commodity prices. To that end he invited Congress to accord him powers to initiate "controlled inflation". Accordingly, this vital amendment was added to the Farm Relief Act, which became law on May 12. Under one of the added clauses the President was authorized, in order either to protect the commerce of the United States from the depreciation of other currencies, or to secure an expansion of credit, to instruct the Federal Reserve Banks to purchase and hold United States Government securities up to a limit of $3,000 millions, over and above the amount already held. So far little action has been taken in the exercise of this new power, and the extent to which the full enforcement of the provision would increase the volume of credit is uncertain. It would depend partly upon the degree to which member banks would use the newly created cash reserves to pay off their indebtedness to their central banks, and partly on the extent to which the member banks would be able to buy new investments or extend new loans on the basis of the newly provided cash. In the longer run, however, the significance of the new provision lies in the extension of governmental control over the Federal Reserve system, and it is evident that, although the Act contains a clause requiring the assent of the Federal Reserve Banks to any such Presidential instruction, the central banking system, for a time at least, has taken on the character almost of a Government bureau. This is but one ironical effect of the depression upon a system designed specifically to secure, among other things, freedom from political influence. The other relevant clause of the amendment authorized the President, either as an alternative or an addition to the power described above, to cause to be issued United States notes up to a limit of $3,000 millions, such notes to be used only for the purpose of meeting maturing Federal obligations or of purchasing United States bonds. So far as available statistics reveal, it appears that this power has not yet been brought into use.

In view of all that has occurred it is impossible except at great length to analyse the fluctuations in banking statistics during the past half-year, more particularly since the scope of some important figures has changed. The Federal Reserve returns are especially confusing, but the principal movements are these. A very heavy return flow of gold and gold certificates following the general closure resulted in a net increase in the gold holding over the past six months, and this has been accompanied by substantial Federal Reserve purchases of securities. On the other hand, much of the addition to gold and security holdings has merely provided the backing for a higher total of Federal Reserve currency outstanding, which is still well above the level of last January. For the rest, the open market purchases have served to reduce the indebtedness of member banks to the Reserve Banks, and their credit balances with the Reserve Banks actually show a net decline over the half-year. The position of the commercial banks can be only roughly estimated, for the compilation of weekly statistics for "reporting member banks" was interrupted by the closure and has been resumed on a restricted basis, to include only a smaller number of banks. It seems likely, however, that, in conformity with the statement just made as to member banks' reserve balances with the Reserve Banks, the cash basis for the active banking system has not yet been restored to its size six months ago, and that deposits are consequently lower. If, then, it be true that the deposits of the active banks have not yet recovered to their pre-crisis level, then, when allowance is made for deposits still immobilized in closed banks, the volume of active bank money must still show a heavy shrinkage. Reflation, therefore, has a long way to go before the quantity of money available for use by the public undergoes positive expansion.

STATISTICAL INFORMATION

INDIA'S FOREIGN TRADE

The trade returns of British India for the month of August, 1933, as compared with the preceding month, showed increase in the value of imports, exports and re-exports. The value of imports of private merchandise totalled Rs. 9,88 lakhs, an increase of Rs. 1,18 lakhs as compared with the preceding month. The exports of Indian produce and manufactures rose by Rs. 1,85 lakhs from Rs. 12,17 lakhs in July, 1933, to Rs. 14,02 lakhs in the month under report. Re-exports also recorded an increase of Rs. 8 lakhs and amounted to Rs. 32 lakhs. The comparison of the trade figures for August, 1933, and the five months, April to August, 1933, with those of the preceding month and the corresponding periods of the preceding year, is set forth below:—

	Month of August, 1933. Rs. (lakhs).	Month of August, 1932. Rs. (lakhs).
Imports	9,88	8,70
Exports	14,02	12,17
Re-exports	32	24

	Month of August, 1933. Rs. (lakhs).	Month of August, 1932. Rs. (lakhs).
Imports	9,88	11,13
Exports	14,02	9,99
Re-exports	32	26

	Five months, April to August, 1933. Rs. (lakhs).	1932. Rs. (lakhs).
Imports	46,71	59,51
Exports	59,74	48,35
Re-exports	1,30	1,24

Treasure on private account, including currency notes, showed a net export of Rs. 4,43 lakhs in August, 1933, as against Rs. 2,62 lakhs in the preceding month and Rs. 4,38 lakhs in August, 1932. The import and export figures of gold and silver during the five months April to August, 1933, compare as follows with the corresponding period of the preceding year:—

	Five months, April to August, 1933. Rs. (lakhs).	1932. Rs. (lakhs).
Gold imported ...	47	51
Gold exported ...	22,46	23,10
Silver imported ...	22	1,12
Silver exported ...	35	34

Measured by the statistics of merchandise and treasure, the total visible balance of trade in August, 1933, was Rs. 8,92 lakhs in favour of India as compared with Rs. 6,37 lakhs in July, 1933, and Rs. 3,52 lakhs in August, 1932. During the five months ending August, 1933, the visible balance of trade in merchandise and treasure was Rs. 36,62 lakhs in favour of India compared with Rs. 12,05 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in August, 1933, was minus Rs. 4,52 lakhs and in five months, April to August, 1933, minus Rs. 23,70 lakhs.

Changes in Imports

As compared with August, 1932, the imports of food, drink and tobacco in August, 1933, decreased by Rs. 15 lakhs to Rs. 91 lakhs, those of raw materials by Rs. 52,000 to Rs. 1,33 lakhs, and those of manufactured articles by Rs. 1,08 lakhs to Rs. 7,46 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) declined from 27,000 tons valued at Rs. 30 lakhs to 23,000 tons valued at Rs. 24 lakhs. The imports of betelnuts advanced in quantity from 74,000 cwts. to 95,000 cwts. but the value declined from Rs. 9 lakhs to Rs. 8 lakhs. Arrivals of raw tobacco rose from 31,000 lb. valued at Rs. 55,000 to 543,000 lb. valued at Rs. 5 lakhs. Imports of provisions and oilman's stores declined from Rs. 22 lakhs to Rs. 20 lakhs owing mainly to reductions under canned bottled provisions. Imports of salt declined by 36,000 tons in quantity and by Rs. 5 lakhs in value. Under raw materials, the imports of kerosine oil receded from 4.9 million gallons valued at Rs. 22 lakhs to 3.6 million gallons valued at Rs. 13 lakhs. Imports of fuel oil also fell from 11.6 million gallons to 9.9 million gallons. Imports of lubricating oils amounting to 2.0 million gallons showed an increase of 678,000 gallons in quantity. Imports of petroleum, dangerous flashing below 76°F including petrol, benzine and benzol advanced from 76,000 gallons to 737,000 gallons in quantity and from Rs. 45,000 to Rs. 2 lakhs in value. Imports of coconut oil declined by 369,000 gallons in quantity and by Rs. 5 lakhs in value. Raw cotton (chiefly imported from Kenya Colony and the United States of America) recorded an increase of 2,700 tons in quantity and of Rs. 21 lakhs in value. Imports of raw silk fell off by 288,000 lb. in quantity and by Rs. 11 lakhs in value. Under manufactured articles the imports of cotton yarn and manufactures decreased by Rs. 1,39 lakhs. The imports of twist and yarn fell from 4.8 million lb. to 2.5 million lb. in quantity and from Rs. 36 lakhs to Rs. 20 lakhs in value. Under cotton piecegoods imports of grey goods fell from 33 million yards valued at Rs. 50 lakhs to 24 million yards valued at Rs. 30 lakhs and those of white and coloured goods from 43 and 53 million yards valued at Rs. 76 lakhs and Rs. 1,02 lakhs to 16 and 23 million yards valued at Rs. 30 lakhs and Rs. 43 lakhs respectively. Under Iron and Steel there was an improvement of Rs. 5 lakhs due mainly to an increase under sheets and plates. Imports of machinery and mill work recorded an advance of Rs. 42 lakhs due mainly to larger arrivals of sugar machinery. The number of motor cars imported amounted to 658 and that of motor lorries, buses and vans to 382. The value of motor cars imported in August, 1933, amounted to Rs. 12 lakhs and that of motor lorries, buses and vans to Rs. 5 lakhs. The imports of dyes obtained from coal tar rose by 710,000 lb. in quantity and by Rs. 9 lakhs in value. Other noticeable variations were decreases under piecegoods of cotton and artificial silk (−Rs. 19 lakhs), rubber manufactures (−Rs. 4 lakhs), increases under woollen manufactures (+Rs. 3 lakhs) and apparel (+Rs. 2 lakhs).

Variations in Exports

Compared with August, 1932, exports of food, drink and tobacco in August, 1933, rose by Rs. 75 lakhs to Rs 4,28 lakhs. Shipments of rice not in the husk, advanced in quantity from 113,000 tons to 159,000 tons and the value thereof from Rs. 95 lakhs to Rs. 98 lakhs. The exports of tea dropped from 44 million lbs. to 43 million lbs. in quantity but the value rose from Rs. 2,12 lakhs to Rs. 2,95 lakhs. Shipments of tobacco unmanufactured declined from 2.7 million lbs. valued at Rs. 9½ lakhs to 1.8 million lbs. valued at Rs. 6 lakhs. Raw materials and produce exported rose by Rs. 2,88 lakhs to Rs. 5,81 lakhs. Under this group raw cotton recorded an improvement of 15,600 tons in quantity and of Rs. 83 lakhs in value. Of the total shipments of 30,400 tons, Japan took 3,000 tons, Germany 5,100 tons, Belgium 4,900 tons, China 4,600 tons, the United Kingdom 4,500 tons, Italy 3,200 tons, France 2,000 tons and Spain 1,000 tons, the remainder being despatched mainly to the Netherlands and the United States of America. Consignments of raw jute also increased from 27,200 tons to 48,100 tons in quantity and from Rs. 45 lakhs to Rs. 73 lakhs in value. Exports of lac rose by 5,000 cwts. in quantity and by Rs. 1 lak in value to 32,700 cwts. valued at Rs. 9 lakhs. Shipments of oilseeds also improved from 42,000 tons valued at Rs. 68 lakhs to 145,000 tons valued at Rs. 1,90 lakhs, groundnuts showing an increase from 25,000 tons (Rs. 45 lakhs) to 67,000 tons (Rs. 87 lakhs), linseed from 5,000 tons (Rs. 6 lakhs) to 48,000 tons (Rs. 64 lakhs), rapeseed from ,7000 tons (Rs. 9 lakhs) to 11,000 tons (Rs. 13 lakhs) and castor seed from 4,000 tons (Rs. 5 lakhs) to 16,000 tons (Rs. 20 lakhs). Exports of raw hides and skins rose by 2,000 tons in quantity and by Rs. 27 lakhs in value. Exports of manganese ore declined by 2,000 tons. Shipments of raw wool rose from 3.3 million lbs valued at Rs. 13½ lakhs to 6.1 million lbs. valued at Rs. 23 lakhs. Manufactured goods rose by Rs. 40 lakhs to Rs. 3,82 lakhs. The yardage of gunny cloth exported contracted from 102 million to 97 millions but the value rose from Rs. 1,00 lakhs to Rs. 1,13 lakhs. The number of jute bags shipped declined from 40 millions valued at Rs. 1,07 lakhs to 37 millions valued at Rs. 1,00 lakhs. Exports of tanned hides and skins rose by 600 tons in quantity and by Rs. 14 lakhs in value. There was an improvement of Rs. 4 lakhs in each case under pig-iron and paraffin wax while cotton manufactures recorded a decline of Rs. 4 lakhs (chiefly due to piecegoods).

Trade with Foreign Countries

The share of the United Kingdom in the imports rose from 37 per cent. in August, 1932, to 43 per cent. in August 1933, and that in the exports fell from 36 to 34 per cent. The shares of Germany, Japan and the United States in the month under report were 7, 14 and 5 per cent. respectively under imports, and 7, 2 and 9 per cent. under exports.

Movement of Shipping

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of August, 1933, amounted respectively to 592,000 and 705,000 as against 576,000 and 618,000 in July, 1933, and 562,000 and 565,000 a year ago. During the five months ending August, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 2,924,000 and 3,150,000 as compared with 2,792,000 and 2,912,000 in the corresponding period of the preceding year.

FOREIGN TRADE OF BOMBAY.

The following statement shows the value of imports and exports of the principal articles of Foreign trade of the Bombay Presidency for five months from 1st April to 31st August, 1933, compared with the corresponding period of the preceding year:—

	Five Months from 1st April to 31st Aug.		
	1932 Value Rs.	1933 Value Rs.	Increase or Decrease.
Imports—			
Merchandise ...	24,82,38,575	18,45,45,066	−6,36,93,509
Treasure, Gold ...	32,12,695	28,12,729	−3,99,966
Treasure Silver ...	78,22,496	4,89,575	−73,32,921
Treasure Currency Notes ...	2,62,985	1,93,545	−69,440
Total Imports ...	25,95,36,751	18,80,40,915	−7,14,95,836
Exports—			
Merchandise—			
Indian produce ...	6,98,95,656	12,94,48,016	+5,95,52,369
Foreign ,, ...	71,19,774	80,41,983	+9,22,200
Treasure, Gold ...	21,02,73,498	21,03,72,934	+99,436
Treasure Silver ...	7,71,983	4,73,005	−2,98,978
Treasure Currency Notes ...	...	7,000	+7,000
Total Exports ...	28,80,60,911	34,83,42,938	+6,02,82,027
Total Imports and Exports ...	54,75,97,662	53,63,83,853	−1,12,13,809

August Figures

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of August, 1933, was Rs. 10.67 crores, showing an increase of Rs. 1.69 crore, or nearly 19 per cent., over the figures for August, 1932, and of Rs. 2.97 crores, or over 38 per cent. over those for August, 1931. The increase of Rs. 1.69 crore is due to larger shipments of both Indian produce and foreign merchandise and gold. Imports of both merchandise and treasure and exports of silver showed decreases.

Imports of merchandise amounted to Rs. 3.68 crores, showing a fall of Rs. 15.08 lakhs, or 4 per cent. from the corresponding figures for August, 1932, but a rise of Rs. 18.12 lakhs, or 5 per cent. over those for August, 1931. The fall of Rs. 15.08 lakhs is chiefly attributable to smaller arrivals of cotton piecegoods (−over 8¼ million yards and−Rs. 19.14 lakhs), silk, raw (−over ¾ million lb. and−Rs. 10.37 lakhs), cotton twist and yarn (−nearly 1 million lb. and−Rs. 9.43 lakhs), artificial silk piecegoods (−over 3½ million yards and−Rs. 7.68 lakhs) and kerosene oil (−over ¼ million gallons and−Rs. 5.49 lakhs, imports of raw cotton, on the other hand, increased by 2,705 tons in quantity and by Rs. 21.18 lakhs in value and those of machinery and millwork and alizarine and aniline dyes by Rs. 9.8 lakhs and Rs. 6.42 lakhs, respectively, in value. Imports of gold amounted to Rs. 4.97 lakhs as against Rs. 8.9 lakhs and Rs. 12.74 lakhs and those of silver to Rs. 1.37 lakh against Rs. 2.79 lakhs and Rs. 18.79 lakhs, respectively.

Exports of Indian produce were valued at Rs. 2.44 crores, showing a rise of Rs. 1.12 crore, or nearly 85 per cent. over the figures for August, 1932, but a fall of Rs. 65.39 lakhs, or 21 per cent., from those for August, 1931. The rise of Rs. 1.12 crore is mainly due to increased shipments of seeds (+44,522 tons and+Rs. 58.57 lakhs, raw cotton (+5,539 tons and+Rs. 35.61 lakhs), wool, raw (+over 1 million lb. and+Rs. 5.11 lakhs), hides and skins raw and tanned (+Rs. 2.7 lakhs) and myrabolans (+Rs. 2.62 lakhs). Exports of gold were valued at Rs. 4.28 crores as against Rs. 3.49 crores and Rs. 28.95 lakhs and those of silver at Rs. ...1.79 lakh against Rs. 6.04 lakhs and Rs. 24.09 lakhs, respectively.

Re-exports of foreign merchandise amounted to Rs. 19.31 lakhs as against Rs. 15.79 lakhs in August, 1932, and Rs. 26.82 lakhs in August, 1931.

The trade statistics of the first five months of the current financial year show a falling off of Rs. 7.15 crores, or over 27 per cent., and of Rs. 5.65 crores, or 23 per cent., respectively, in imports, as compared with the figures for the corresponding period of the years 1932-33 and 1931-32 but an improvement of Rs. 6.03 crores, or nearly 21 per cent., and of Rs. 15.42 crores, or 79 per cent., respectively, in exports. During this period imports of gold declined by Rs. 4 lakhs and Rs. 28.48 lakhs to Rs. 28.13 lakhs and those of silver by Rs. 73.33 lakhs and Rs. 1.06 crore to Rs. 4.9 lakhs, respectively. Imports of merchandise amounted to Rs. 18.45 crores, showing a fall of Rs. 6.37 crores, or over 25 per cent., and Rs. 4.3 crores, or nearly 19 per cent. The fall of Rs. 6.37 crores as compared with the figures for the corresponding months of 1932-33 is chiefly accounted for by smaller arrivals of most of the principal articles of import, the more important being raw cotton (−38,927 tons and−Rs. 3.43 crores), cotton piecegoods (−23¾ million yards and −Rs. 61.28 lakhs), kerosene oil (−4¾ million gallons and−Rs. 44.39 lakhs), cotton twist and yarn (−nearly 4 million lb. and−Rs. 42.9 lakhs), silk, raw (−over ¾ million lb. and−Rs. 34.92 lakhs), metals and ores (−Rs. 30.67 lakhs), alizarine and aniline dyes (−Rs. 28.22 lakhs) and artificial silk piecegoods (−over 12¾ million yards and−Rs. 27.67. lakhs).

Exports of gold amounted to Rs. 21.04 crores as against Rs. 21.03 crores and Rs. 1.36 crore and those of silver to Rs. 4.73 lakhs against Rs. 7.72 lakhs and Rs. 83.36 lakhs. Exports of Indian produce amounted to Rs. 12.94 crores, showing an advance of Rs. 5.96 crores, or 85 per cent., as compared with the figures for the corresponding period of 1932-33 but a decline of Rs. 3.03 crores, or 19 per cent., as compared with those for the same period of 1931-32. The improvement of Rs. 5.96 crores is brought about mainly by larger shipments of raw cotton (+77,387 tons and +4.88 crores), seeds (+58,218 tons and+Rs. 62.8 lakhs) and raw wool (+over 5½ million lb. and+Rs. 22.43 lakhs).

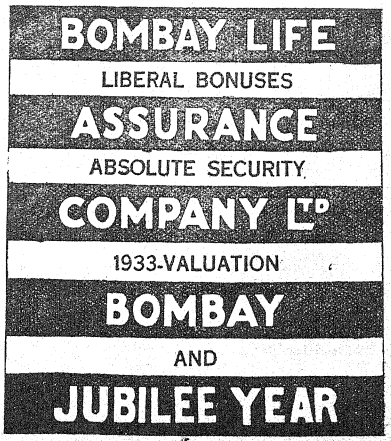
Re-exports of foreign merchandise were valued at Rs. 80.42 lakhs as against Rs. 71.2 lakhs and Rs. 1.25 crore, respectively.

BURMA'S MINERAL TRADE

According to the Report on the Mineral Production of Burma for the year 1932, the total value of all minerals exported during the year was Rs. 17,88,82,225 (as against Rs. 12,64,94,512 in the previous year) of which Rs. 14,22,10,156 were exports to India, and Rs. 3,66,72,069 were exports to foreign countries. The total value is a substantial increase over the figures of the previous year. Minerals worth Rs. 87,55,232 were imported into Burma during 1932, as against Rs. 1,23,56,766 in the previous year. Of the minerals imported Rs. 59,40,994 worth were imported from India, and the balance from abroad. The principal minerals exported to foreign countries were jade, gold, silver, copper blocks, pig lead, lead (other sorts), tin-ore, wolfram-ore, zinc concentrates and mineral oils of various kinds. There was a marked drop in the export of gold, copper blocks, pig lead, wolfram-ore and zinc concentrates to foreign countries. The principal minerals exported to India were bar-silver, pig lead, tin blocks and mineral oils of all kinds. The principal minerals imported from foreign countries were precious stones (including diamonds), uncoined gold, chalk and lime, clay., coal, tin and mineral oils of all kinds. The principal imports from India were coal and minerals oils of various kinds. The kinds and quantities of mineral oils imported during the year are set out below:—

Kinds of Mineral Oil.	From Foreign Countries	From India
	Gallons	Gallons.
Fuel oil	7,829,556	...
Kerosene oil in tins ...	517,963	127,417
Petroleum dangerous, etc. ...	27	131
Lubricating oil	421,092	10,644
White oil	27,926	...
Other kinds	35,207	145,770

53,208,325.75 gallons of dangerous and 165,155,617 gallons of non-dangerous petroleum, 8.6578 tons of tin (metallic), 182.1429 tons of tin concentrates carrying wolfram and 185.3213 tons of mixed tin and wolfram concentrates were refined in Burma during the year.



COMPANY REPORTS

RATIBATY COLLIERIES

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,00,000	Block (nett) ...	4,09,207
Compensation fund	1,304	Stocks ...	16,580
Loans ...	1,96,500	Outstandings ...	29,971
Debts ...	17,670	Investments ...	1,304
		Cash balance ...	3,056
		Loss	55,356
Total Rs. ...	5,15,474	Total Rs. ...	5,15,474

Extracts from Directors' Report:

The directors of the Ratibaty Collieries submit the audited accounts for the half-year ended June 30, 1933. During the half-year raisings were 20,926 tons coal as against 25,127 tons in the corresponding half-year, 1932. During the half-year despatches were 17,698 tons coal as against 17,549 tons in the corresponding half-year, 1932. The average rate realised for steam coal at pitsmouth was Rs. 3-12 per ton and the stock of steam coal has been valued in these accounts at Rs. 3 per ton. The collieries continue to work on restricted output. After providing for all charges and carrying Rs. 27,000 to depreciation fund there remains a balance of Rs. 55,355 at the debit of profit and loss account including the loss of Rs. 42,801 brought forward from the previous half-year.

SATPUKURIA AND ASANSOL COLLIERIES

Synopsis of Balance Sheet:

The managing agents (Messrs. Shaw Wallace and Company) submit their report and accounts for the half-year ended July 31, 1933. The working for the half-year shows a gross profit of Rs. 23,976, to which has to be added the amount brought forward from last half-year Rs. 7,071 making a total of Rs. 31,048. After providing for depreciation, Rs. 9,273, taxation and manager's commission, Rs. 4,533, there remains a balance of Rs. 17,286. This sum the managing agents recommend should be dealt with as follows:—In payment, on application, of a dividend at the

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent.)

Bombay, October 6.

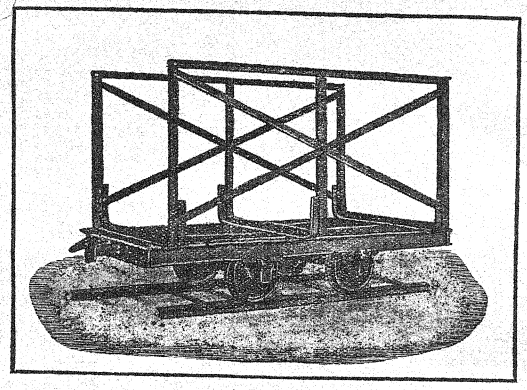
The crisis that was precipitated in the local share bazar had its repercussions on the securities market. People who have to face heavy liabilities in respect of mill shares had perforce to sell their actual holdings of securities and other scrips. As a sequel to this, rates for giltedged securities weakened, with 3½ per cent. government paper coming down to 82-13 from its previous level around Rs. 84. However, as Indian sterling loans in England are being maintained at a high level, rates here, too, have again steadied and 3½ per cent. Paper closed to-day at 83-4-6 after touching 83-8. In the Share Bazar only cash business is going on. Directors have fixed rates different on shares at which "budlee" is to be effected in respect of forward transactions. Rule No. 188 has been brought into operation so that purchasers of shares will get extension of time for paying money against delivery. However, the position is very grave. There is the contingency of all kinds of Currimboy group going into liquidation which would bring a veritable crisis to bazar. If this is averted by persuading creditors and on finding financiers to take over the agencies of these mills, then only the blow will be less calamitous. Other mill shares have suffered in value to some extent but industrials are not much affected.

American markets have moved within a narrow range and on balance showed a small decline. In view of the Government's loan plan, the holding movement is expected to stiffen. However, daily hedges carry down rates, trade demand being inadequate to cope with them. Next Bureau report is unlikely to provide any sensation. Local rates however have sagged badly, Broach rate declining from 201-4 to 193. The closing rate to-day was 195-8.

With heavy movements in foreign exchanges, local prices had witnessed exciting fluctuations. Rate for ready gold in London touched the record height at 6-14-8, while local October rate rose to 33-7-6, as the sterling franc rate declined to 78. Franc rate is moving about 79 this afternoon with local rate being quoted 33-1.

Silver prices remained very dull throughout the week with a slightly easier tendency. October rate this afternoon hovered about 56-4.

AR CANE TRUCKS



Four wheel or Double Bogie Type to suit any desired capacity

Manufactured by Experts at their Kidderpore Works, Calcutta,.

12, MISSION ROW, CALCUTTA.

rate of 7½ per cent. per annum, free of income-tax, Rs. 9,375 ; leaving to be carried forward Rs. 7,861. The loss of the usual railway contract referred to in our last report is reflected in the results for the half-year. Satisfactory reductions in costs have been made to meet the reduced offtake, but prices continue to show a steady decline. Raisings and despatches of all grades of coal for the last two-half-years were as follows :—Half-year ended July 31, 1933.—Raisings 31,646 tons, despatches 35,662 tons. Half-year ended January 31, 1933.—Raisings 47,230 tons, despatches 44,167 tons.

DYER, MEAKIN AND COMPANY

Synopsis of Balance Sheet:

Assets.	Rs.	Liabilities.	Rs.

		Cash balance ...	1,86,639
Total Rs. ...	24,09,749	Total Rs. ...	24,09,749

Extracts from Directors' Report:

The directors of the Dyer, Meakin and Company submit their report for the year ended March 31, 1933. The accounts for the year 1932-33 show a profit, subject to income-tax, of Rs. 1,03,820 ; to this sum has to be added the amount brought forward from last year, which, after payment of income-tax, left a balance of Rs. 16,216 ; bringing the total available for income-tax and distribution to Rs. 1,20,036. The directors recommend the payment of a final dividend of 1½ per cent. which, added to the interim dividend of 2½ per cent. already paid, will make a total dividend of 4 per cent. free of tax for the year 1932-33, absorbing Rs. 72,000, leaving a balance of Rs. 48,036. From this amount there has to be provided in respect of income-tax a sum of Rs. 20,000, leaving a balance, which the directors propose should be carried forward, to a dividend equalisation reserve fund, amounting to Rs. 28,036. The directors call special attention to the fact that during the year 1932-33 they have had to provide the sum of approximately Rs. 50,000 for distribution as bonus to their late general manager, and to their manager in Burma both of whom retired during the year after giving over forty years' service to the company ; also to other members of the staff who left the service of the company during the past twelve months. These exceptional payments would otherwise have been available for distribution and represent the value of an additional 2¾ per cent. dividend, but whilst forming a serious charge on the year under review, they are not likely to recur for many years to come. During the year considerable economies have been made in the establishment, which should manifest themselves during 1933-34. There has been a general decline in the sale of draught beer to army canteens, which has hitherto comprised the major portion of the company's trade but, on the other hand, the spirit sales from our distilleries show a satisfactory increase at economic prices due to the reduction of duty.

HARDWAR-DEHRA BRANCH RAILWAY CO. LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	31,50,000	Block ...	34,58,126
Debts ...	4,01,878	Suspense A/c. ...	29,085
Profit & Loss ...	1,23,215	Cash ...	1,87,982
Total Rs. ...	36,75,193	Total Rs. ...	36,75,193

Extracts from Directors' Report:

Report for the year ended 31st March, 1933.

Capital.—The total paid-up Capital of the Company on 31st March, 1933, was Rs. 31,50,000. There was no Capital Expenditure during the year, but a sum of Rs. 5,282-14 was adjusted as a credit to Capital, making the total expenditure from the commencement of operations to 31st March, 1933, Rs. 34,58,126-7-11.

Net Revenue.—The Net earnings for the year amounted to Rs. 3,67,921-13-5, as compared with Rs. 3,60,692-11-0 for the year ended 31st March, 1932. During the year further falls occurred both in Coaching and Goods earnings owing to Motor Competition and the continued depression in trade. The decrease was, however, more than offset by certain adjustments of earnings from previous years which were made in our favour during the period under review. Since the close of the year earnings from both Coaching and Goods traffic have shown some slight improvement and we hope that this state of affairs will continue. After providing for Guaranteed Interest on capital outlay Rs. 1,03,987-11-11 and Government surplus profit Rs. 1,31,967-0-9, the Company's s surplus profit amounts to Rs. 1,31,967-0-9, as co with Rs. 1,28,401-12-2 in the previous year, which been transferred to Profit and Loss Account.

Profit and Loss.—The amount available for distri tion at 31st March, 1933, including the amount broug forward, is Rs. 1,23,214-10-8 as compared wit Rs. 1,20,869-11-2 at 31st March, 1932. Out of this we propose to pay a dividend of Rs. 3 per share (less Income Tax), making the dividend for the year ended 31st March, 1933, 6 per cent. This distribution will absorb Rs. 94,500 and leave, after payment of Managing Agents' Commission, Rs. 19,264-10-8 to be carried forward. Gillanders, Arbuthnot & Co., Managing Agents.

DELHI CLOTH AND GENERAL MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	20,00,000	Block ...	69,49,053
Reserves ...	46,99,176	Stocks ...	25,34,349
Debts ...	25,06,876	Outstandings ...	9,72,583
Profit & Loss ...	13,55,503	Investments ...	1,596
		Cash & Deposits	1,03,974
Total Rs. ...	1,05,61,555	Total Rs. ...	1,05,61,555

Extracts from Directors' Report:

Report for the year ending the 30th June, 1933.

The combined profits of the cotton and the sugar mills for the year together with Rs. 9,131-0-7 brought forward from the last year amount to Rs. 13,55,502 which the Company proposes to dispose of as under :—Dividend at Rs. 10-10 per share free of income tax Rs. 4,25,000, Dividend on Preference share at Re. 1-2 per share Rs. 45,000, Bonus to staff and workpeople Rs. 25,000, Welfare work Rs. 30,000, Pension fund Rs. 25,000 Charity Rs. 12,000, Income Tax Rs. 2,50,000, Depreciation Rs. 3,00,000, Reserve Rs. 2,40,000, balance to be carried forward Rs. 3,502-9-5, total Rs. 13,55,502-9-5.

The price of the shares has touched the level of Rs. 185 which seems rather high.

The Directors are glad that they have put up a Sugar Factory at a very opportune time, which may help in maintaining the old rate of dividend for sometime. As will be seen the profits of the Cotton mills alone this year would have been much below those in the last year.

Last year it was expected that the sugar factory will continue to yield decent profits for a long time. But the number of the Sugar factories in the country is multiplying uneconomically and the cut-throat competition is certain to take place in that industry also next year.

The future of the Textile Industry is very dark indeed. The only and the real remedy of the situation is the increase in the purchasing power of the farmer by the depreciation of the Rupee, but there seems no hope for it in the near future.

Great efforts are being made to improve the efficiency of labour and to bring down the cost of production without reducing the individual income of the worker in our mills.

During the year under review the Company has purchased the plot of land situated between Chawls No. 3 and 4 for Rs. 1,45,480-8 for building the workmen's quarters.

The Company has great pleasure in expressing its sincere thanks to the Secretary and the staff for the very hard work that they have done in erecting and starting the Sugar Factory at Daurala in a marvellously short time. The staff of the Cotton mills also has worked with great cheerfulness and at a very high pitch to combat the severe depression. The directors cannot but admire their services and thank them for the same.

The Law suit for Rs. 4,11,691-2-10 referred to in our previous reports has been decided against the Company to the extent of Rs. 1,73,311-5-1 plus Rs. 8,662-14 for expenses against which the Company filed an appeal. The Decree holder also has filed an appeal for Rs. 1,19,904 for interest and expenses.—Narain Datta, Sher Singh, Ram Roop, Hari Ram, Sobha Singh, Directors.

NEW OBLIGATIONS IN PROTECTED INDUSTRIES

There is a growing feeling in the country that the time has certainly arrived when, in regard to protected industries, specific and well-defined obligations should be imposed on the companies comprised in everyone of such industries. It seems to us that the public at large are getting restive over this matter. A good many of the members of the Assembly on the non-official benches have begun to look with suspicion on all protective measures coming up for discussion in the legislature.

It is argued that the Indian industrialists have been treated quite generously whenever they can put up a reasonably convincing case for some manner of protection. The Tariff Board, whose advice is sought in the first instance, have shown a large measure of understanding and sympathy for national industries needing help. The Government themselves have, in most cases, acted on the recommendations of the Tariff Board. The popular representatives in the Assembly have never turned down proposals sponsored by the Government and based on Tariff Board recommendations. The general public have been perfectly willing to recognise the importance, from the point of view of national economic policy, of according suitable and adequate support to the industries in question; the public in their capacity as consumers have shown a praiseworthy readiness to undergo sacrifices. It would thus be seen that as between the industries on the one side and the various other interests on the other side (including the Tariff Board, the Government, the Legislature and the consumers), the latter have done their part of the duty with alarcity and cheerfulness.

The question which has yet to be answered is whether the industries concerned have, on their part, done their duty by the State and the public. We are afraid that no serious attention has so far been paid to this aspect of the matter. If, for instance, we tell those in charge of the cotton mill industry that they should put their house in order, they flare up and indignantly retort that they are fed up with this cheap advice. If the industries enjoying protection are requested to place their own affairs in proper trim, it is because the State and the public cannot be a party to propping up a chronically inefficient industry and to perpetuating such inefficiency. The justification for protection is that the industrialists in question undertake all such reform, reorganisation and rationalisation that are necessary for the most economical and efficient working of the concerns comprised in the industry. It is nobody's intention to rub the industrialists the wrong way; but it should be everybody's purpose and duty to remind them of the bare obligations they owe in return for the great support that has been accorded them. To remind them of obligations is not a taunt. To fail to remind them in this regard would amount to a condoning of inefficiency and pampering of vested interests.

From this point of view, we feel that as more and more industries are now sheltered by protection, the reform of Company Law with a view to defining the obligations of managing agents and directors is to-day an urgent and imperative matter.

The existing Companies Act was devised without any special appreciation of local conditions. For many decades, the official view has been that whatever banking or insurance or mercantile law is in force in Great Britain should be good enough for India. In this facile generalisation, it has always been forgotten that England is the kind of country where the unwritten law in the form of traditions, conventions and precedents has tremendous force and compels universal allegiance; in a country of the status of India, where banking and other institutions of the modern type are a recent growth and have not yet had time to build up traditions and conventions, the written law has to be, necessarily, more comprehensive, less loosely-worded and more stringent.

The very laxity of insurance law in India is responsible for vagaries of various kinds in a few of the older concerns and for an unhealthy mushroom growth of new companies in recent years. If the stiffening of insurance legislation is not taken on hand immediately; if the companies whose finances have been disrupted by dishonest or other practices on the part of those in authority, are not rescued betimes from the grip of mal-practices and unwholesome practices; and if an effective check is not placed on the starting of new concerns by any Tom, Dick or Harry without any plan or resources, the future of Indian insurance is one that should cause grave misgivings. Indian insurance offices—such of them as are conducting their business with honesty and care (thank God, the majority of them are conducted with honesty and care)—have made markedly strong headway in the past decade. Progress in this direction has stood out in glaring contrast to the standstill or retrograde conditions that have prevailed in regard to other types of joint stock enterprises. It would be a great pity if a development so creditable and so satisfactory is to be retarded by the calamity overtaking the unsound concerns. Yet, we do not see how a calamity of this character can be avoided if the Commerce Member delays any further in the matter of Insurance Law reform.

What is true of Insurance Law is true of Company Law. In fact, the issues involved in the latter are of far greater importance, for the very simple reason that the number of joint stock enterprises of a general description are far larger in number than joint stock concerns promoted for the transacting of insurance business. The shyness of Indian capital has been confirmed and emphasised by a state of affairs in which the existing Company Law affords the maximum loopholes for the whims and vagaries of managing agents and directors. Is it not surpris-

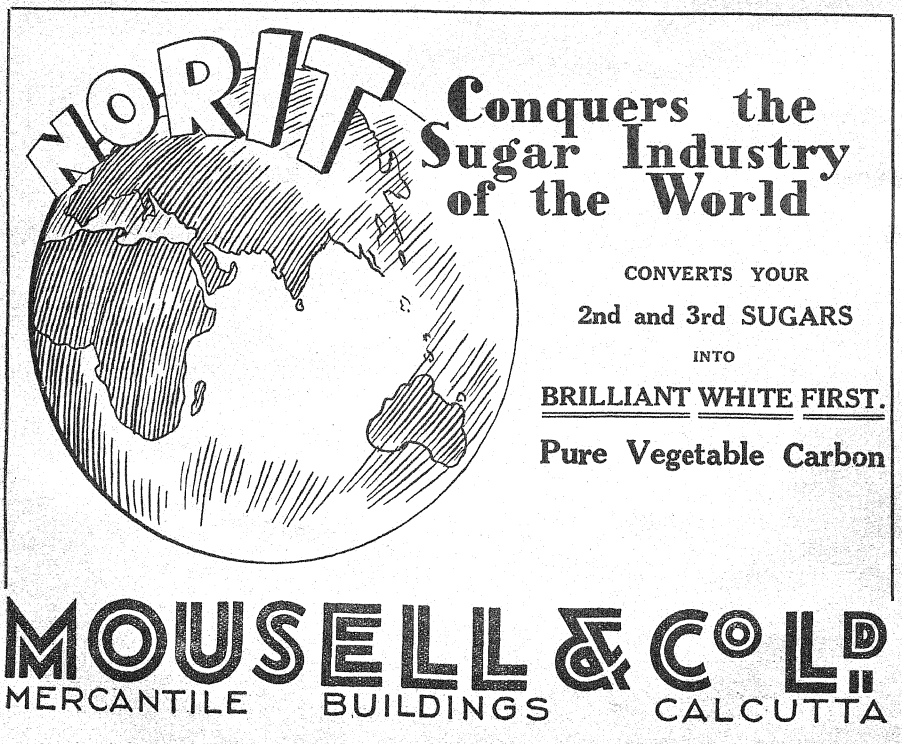
ing that, while India is the one country where company organisation centres round the system of managing agency, the very phrase "managing agents" does not find any mention whatsoever in all the scores of sections in the Indian Companies Act? This fact in itself would prove that those, who framed the Law, had no idea or understanding of the peculiar circumstances that should be taken note of in the case of this country. It is certainly time that, in the light of the experience of the working of joint stock concerns over the past two or three generations in India, and in the light of the peculiar needs and the special conditions of this country, the Companies Act is revised in a thorough-going manner.

As it is, the Law imposes some responsibilities of a more or less trivial nature on directors and auditors. So far as managing agents are concerned, their name, does not occur even once in the Companies Act; it means that no special responsibility could be fixed on them. In the result, managing agents are able to aggrandise to themselves every manner of right, privilege, power, emolument and authority. They enjoy all this without owing any duty or accepting any responsibility. The arrangement as between managing agents and the Company is thus a most one-sided affair. It is not surprising that this has led to considerable abuses. Nor should it be a matter for surprise that the Bombay Shareholders Association launched a bitter attack on the managing agency system in the course of the evidence that they tendered to the Tariff Board on the textile industry. We believe that the Tariff Board report on the cotton mill industry has a lot to say on the uses and abuses of the managing agency system in reference to this particular industry. We believe that the remarks of the Tariff Board in this behalf should furnish the most useful starting point for the study of the reform of the Companies Act with a view to the purging of the managing agency system of such abuses as have grown up. We are, therefore, extremely grieved that this report has not so far been published by the Government.

In order to illustrate the urgency of defining the obligations of the managing agents in protected industries, it would be useful to study the prospectuses and the Articles of Association of the various concerns that have been started in the past two years for the purpose of taking advantage of the heavy protective duties levied on sugar. It is obvious that when the Tariff Board recommended such protective duties, when the Government accepted the recommendations and the Legislature ratified them, it was their joint and several intention that the profits to be made by the headier expansion of sugar concerns in India should be distributed amongst the various factors involved. It could never have been the intention of the Tariff Board or the Government or the Legislature that the profits should be the monopoly of anyone single factor. Yet this is what has happened.

The agriculturist continues to get the same low prices for his sugar-cane. He has not been benefitted to any extent. The shareholders are still at the mercy of managing agents who have got all the power in their hands. If the shareholder is to receive any benefit, it will be only after the managing agents have secured to themselves all possible benefits. It is the managing agents that have secured the maximum of benefits in the transaction. In prospectus after prospectus, we have noticed fantastic conditions and fabulous emoluments provided in favour of managing agents. Some of these prospectuses were examined in earlier issues of *Indian Finance*.

We have received this week the prospectus of the Kesar Sugar Works whose registered office is in Bombay. The issued capital of the Company is



Rs. 15 lakhs; and there is to be a debenture of Rs. 8 lakhs. The debenture is already fixed up; arrangements have been concluded with the Central Bank of India. Of the issued capital of Rs. 15 lakhs, Rs. 10 lakhs "have been agreed to be taken by the managing agents' firm and their family which will be allotted in full." The arrangement, by which shares of the value of Rs. 10 lakhs are to be taken up by the managing agents, is connected with the taking over by the Company of the factory and works including lands, buildings, warehouses, officers' staff and coolies' quarters, railway siding, plant, machinery and other equipments from the promoters. The promoters are to be the managing agents. The total sum paid by the promoters in respect of the matters aforesaid and otherwise in relation to the Company and its formation, incorporation and establishment amounts, it is said, at present to about Rs. 15 lakhs. Out of the proceeds of the present issue of capital and the amount of the debenture loan to be raised by the Company, "the Company will pay off to the promoters the said amount already paid by them as aforesaid, and the further amount that may hereafter be paid by them on behalf of the Company, in terms of the said agreement (a) referred to in clause 4 of the Articles of Association of the Company." Be it said in justice to the promoters that the following clause is added:

> No amount is to be paid to the said Kilachand Devachand and Co., Ld., as such promoters and vendors as aforesaid either as promotion money or for goodwill, except that they are to be paid interest at the rate of 6 per cent. per annum on the amounts paid by them on behalf of the Company.

Now the proposition in simple terms is this. The promoters who are to be the managing agents, have bought land, erected buildings, purchased machinery, built quarters etc. They say that the expenditure up to date is Rs. 15 lakhs. They also imply that further expenditure will be incurred. The Company will, therefore, have to pay them a sum in excess of Rs. 15 lakhs. It may be two or three lakhs more than Rs. 15 lakhs. As against this, the promoters and their family will take up shares of the value of Rs. 10 lakhs. They will thus be paid Rs. 10 lakhs in shares and the balance in cash. In all the various sections of the prospectus, it is not stated whether payment will be made for the property of the vendors on a mere statement of the vendors or on a proper audit certificate. In the case of a company flotation where the existing business is taken over, it should be insisted that a certificate by a reputed firm of auditors as regards assets and liabilities should form the basis of the transaction. In the absence of such a provision, the vendors can, in spite of a general assurance that no amount is paid as promotion money, never inspire confidence that the Company is being asked to pay only just the amount that is the actual value of the property.

We shall not be surprised if the agreement (*a*) referred to in article 4 of the Articles of Association does stipulate that the amount of consideration paid is to be on basis of a proper certificate by a qualified auditor. But the point we seek to make out is that Company Law should make it clear that in the case of concerns taken over as going concerns by limited companies, the valuation to be accepted for payment to vendors must be one certified by a firm of auditors of repute and standing. In the existing conditions, the managing agents may provide, as a matter of grace, that an auditor's certificate would be furnished. But why should so important a matter be left to the tender mercy of the managing agents?

The promoters, who are to be managing agents, are Messrs. Kilachand Devchand & Co., this is a firm of good standing in Bombay; and their management of a cotton mill secures for them a high repute for efficiency. We have no doubt that in their management of the sugar concern, they will show equal skill and efficiency; but may we ask whether it is at all desirable that of the five directors of the sugar company, four should belong to the Kilachand family? The following are the names of the directors:

> 1. Nandlal Kilachand Esq., Merchant and a Director of Kilachand Devchand and Co., Ld., Appollo Street, Bombay. (Chairman)
> 2. Sir Kikabhai Premchand Kt., of Messrs Premchand Roychand and Sons, Financiers, Appollo Street, Bombay.
> 3. Ramdas Kilachand Esq., Merchant and a Director of Kilachand Devchand and Co., Ld., Appollo St., Bombay.
> 4. Chotalal Kilachand Esq., J. P., Merchant, Appollo Street, Bombay, Special Director.
> 5. Tulsidas Kilachand Esq., Merchant and a Director of Kilachand Devchand and Co., Ld., Appollo st., Bombay, *Ex-officio Director*.

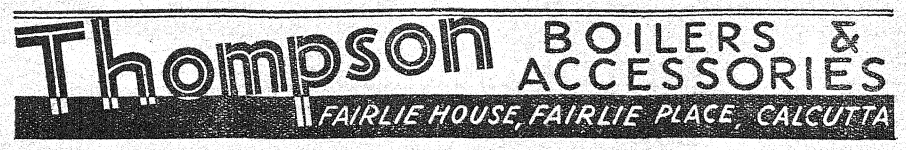
Sir Kikabhai Premchand is a well-known and influential businessman and financier of Bombay. It is clear that the remaining four directors are of the Kilachand family, though one of them does not appear to be a member of the managing agency firm. This is what the prospectus says about the interest of directors:

> "Mr. Nandlal Kilachand, Mr. Tulsidas Kilachand and Mr. Ramdas Kilachand are three or the Directors of the Company and are also partners in the firm of Kilachand Devchand and Co., the managing agents of the Company, and as such they are interested in the remuneration to be paid by the Company to the said managing agents . The said Nandlal Kilachand, Tulsidas Kilachand and Ramdas Kilachand, who are the directors of the Company, are also the directors of the said Kilachand Devchand Co., Ld., who are the promoters of the Company and also the vendors to the Company in respect of the lands, buildings, machinery, plant, railway siding and other articles and things and of all contracts and negotiations therefor to be taken over and adopted by the Company and who are to be paid by the Company the actual amount paid by them."

Be it added that as two-thirds of the capital will be in the hands of the managing agents, the outside shareholders who will hold only one-third will never be able to put in any director of their own. It is, therefore, quite possible for the managing agents to conduct affairs in such a manner that the directorate is monopolised by themselves for as long as they like. It is also possible, we admit, that after the shares have been taken up, the managing agents may invite one or two of the bigger shareholders to join the directorate. But this they need do only as a matter of grace; and the point we seek to make out is that in regard to the representation of an important minority amongst shareholders, their rights should not be left to the tender mercies of the managing agents.

Now we come to the remuneration payable to managing agents. The remuneration of the managing agents shall be as follows:

(*a*) A sum of Rs. 1,500 per mensem as office allowance; (*b*) A commission of 2 per cent. on all sales; and (*c*) A commission at the rate of 5 per cent. on the net profits.



Nearly a century of experience — at your service!

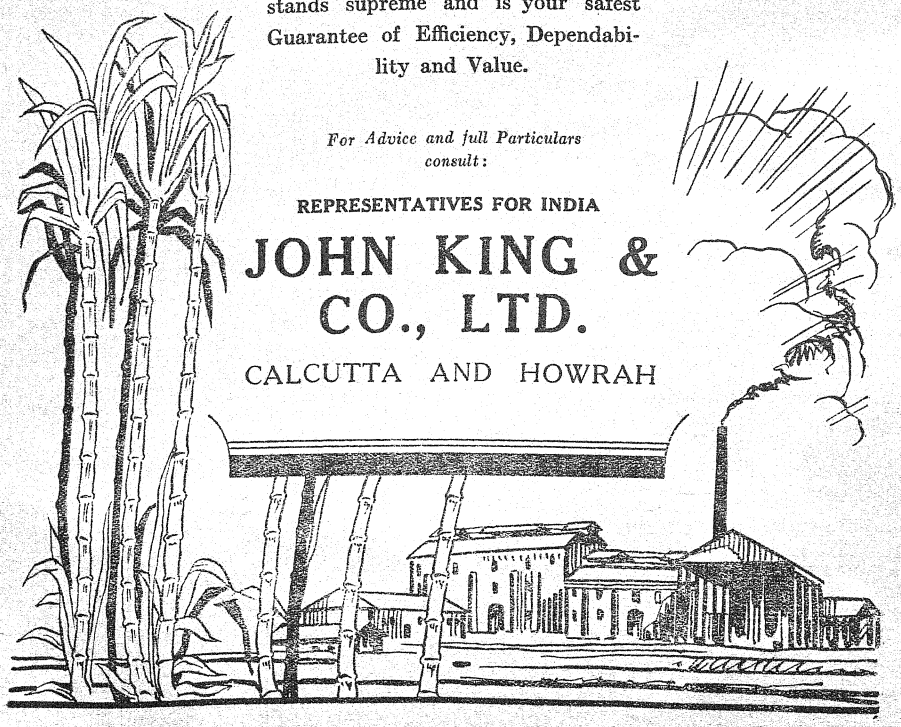
CALCUTTA AND HOWRAH



It is bad enough that an office allowance of a sum so large as Rs. 1,500 is to be appropriated by managing agents in the case of a concern whose paid-up capital will be only Rs. 15 lakhs. The office allowance on the Bombay side is understood in a different sense from office allowance in Calcutta. Against the office allowance received by managing agents in Calcutta, the latter provide office accommodation and secretariat staff and render a few other services. On the other hand, in the Western Capital, office allowance is really a kind of salary to the managing agents. It is an allowance "for supervision of and attention to company's business". While everyone will consider that the remuneration of Rs. 1,500 per mensem errs on the extravagant side, the agreement between the Company and the managing agents confers the power on the directors to increase such office allowance from time to time whenever they shall consider the affairs of the Company warrant such increase. It does not, of course, suit the managing agents to provide for the contingency when the affairs of the company would warrant a decrease in the office allowance.

As for the commission on the sales of the company's products, this is accepted, on all hands, to be an arrangement which should be discouraged.

So far as the commission on the net profits is concerned, the agreement lays down that such profits are "to be calculated after making all proper allowances and deductions from revenue for all usual working charges, outgoings and repairs chargeable against profits and for interest on loans, advances, and deposits, including interest on debentures (if any), but without any deduction being made for or in respect of any expenditure on capital account, or for any amount that may be set aside for or carried to depreciation, insurance, reserve or any other special fund or funds or for or in respect of income-tax, super-tax, excess profits duty or any other tax or duty on income or revenue". If, for income-tax purposes, deduction in respect of depreciation, insurance etc., is to be allowed, we do not understand why the managing agents' commission should be calculated on any other plan. It may be argued, on the other side that while the usual percentage commission of profits is 10 per cent., the managing agents in the present case take only 5 per cent. But the scale of office allowance is on the high side; and a commission on sales should not have been there.

We have commented at this length on the prospectus of the Kesar Sugar Works as we believe that the response of the public to the invitations for share capital could not be warm even in respect of an admittedly prosperous industry like sugar manufacture until and unless the public are assured that the managing agents do not entrench themselves in an impregnable position and that they ask for only reasonable remuneration. Since the sugar boom started, limited companies have been started for the manufacture of sugar with an authorised capital of anything like Rs. 12 crores. Of this amount, the major part has been contributed by the capitalist-cum-managing-agents. As a matter of fact, a good many of the concerns are, for all practical purposes, private, proprietory concerns; and they have been converted into limited companies only for the sake of form and not for the sake of attracting outside capital. Even so, such concerns as have had to depend on the public for capital could not evoke a satisfactory response because the public have not sufficient confidence in the type of companies that are being started. If the law on this matter could be clear; if it laid down definite obligations on the managing agents and directors; if it gave a reasonable assurance that no one interest could have an unduly big slice of the profits, the public would have taken a far bigger interest in the various sugar propositions that saw the light of day in the past many months.

The Tariff Board is now enquiring into the case for the continuance of protection to the steel industry. We believe that Dr. Matthai and his colleagues will pay special attention to this problem of the new obligations that must be imposed on the companies in question, and particularly on the managing agents. It should not be difficult to arrive at clear ideas as to the nature of such obligations. The managing agency agreements in the case of most Calcutta companies are free from clauses tending to affect the rights of shareholders adversely. So far as the recent floatations are concerned, we may commend the arrangements adopted by Messrs. Begg Sutherland and Company of Cawnpore in the case of their sugar propositions. We may invite special attention to the managing agency agreement of the India Sugars and Refineries Ltd., of which the managing agents are Messrs. A. Ranganatham & Co., and the registered office is located in Madras. The management is to be entrusted to Messrs. A. Ranganatham and Company under any arrangement which, while ensuring continuity of interest in the working of the Company, will safeguard the interest of the shareholders from first to last. The following clauses are noteworthy and deserve careful study:

> "The financial interest of the managing agents in the Company is very substantial, they having, even before entering upon their duties as managing agents, subscribed for more than 20,000 ordinary shares, aggregating to over Rs. 2,00,000. The provision in the managing agency agreement that, in the event of the managing agents holding at any time in future less than 10,000 shares as a minimum, the managing agency will stand automatically cancelled is another practical safeguard of the shareholders' interests.
>
> The most noteworthy safeguard, however, devised in the interests of the shareholders, is the basis of remuneration to the managing agents. The basis of remuneration provided to Messrs A. Ranganatham & Co., recognises and co-ordinates the legitimate interests of the management on the one hand and of the investing public and the shareholders on the other. The managing agents are to be paid no salary, no allowance and no commission on purchases or sales. Further, only after the preference shareholders shall have received the full interest of 7½ percent per annum on their paid-up capital, and after the ordinary shareholders shall have received a dividend of 9 percent on their paid-up capital, 20 percent of the remaining profits in each year will be paid as remuneration to the managing agents. In the event of the profits not being sufficient in any year to meet the full preference share interest equal to 7½ per cent per annum and also to meet the dividend of 9 per cent. per annum on the

Managing Agents: **MARTIN & CO.**

12, MISSION ROW, CALCUTTA.

ordinary share capital, the managing agents as such shall not receive any remuneration at all for that year."

As the prospectus of the India Sugars and Refineries Ltd., points out, it is a common practice for managing agents to be paid, as a matter of course, a substantial monthly allowance besides a percentage of the gross profits of the Company; in several companies, the managing agents get as additional remuneration a percentage of the total turnover and even on purchases made for the Company, without regard to the fact whether a company is working at a profit or loss. With pardonable pride, the directors of the India Sugars and Refineries Ltd., claim great credit for themselves that in the case of their concern there is no room whatsoever for such apprehensions.

> "The fact that the well-known gentlemen constituting the managing agency firm have agreed to give their services on the said basis of remuneration, coupled with their substantial financial contribution to and stake in the share capital of the company is proof not only of their desire to work this company, as a model of joint stock enterprise to the advantage of shareholders, but also of the confidence which the management constituting of practical men of experience feel in the successful working of the Company."

With the above *chit*, we are in full agreement; and we only hope that every new entrant to the world of joint stock companies could so devise their plan and constitution as to deserve such *chits*.

We expect that the Tariff Board's examination of the steel industry should be over by the middle of 1934. It is possible that there may be no enquiry of an urgent nature for reference to the Tariff Board at that time. Such reprieve as the Board has on this account would best be utilised by entrusting the examination of Company Law to a committee presided over by Dr. Matthai. He is versed in the theory of economics. At the same time, he has knowledge of the practice of business. As for his erudition, scientific approach of all economic problems and just poise of mind, Dr. Matthai is the biggest asset from the point of view of national economy. As for his practical experience, he is now conversant with conditions of over a score of different types of industry. His knowledge and authority are unquestioned; and the examination of Company Law could not be entrusted to more competent hands.

In the discussions that take place as regards the new constitution that India is to get, we are told, *ad nauseum*, that every precaution should be taken so as to ensure the continuance of the confidence of foreign investors in India. May we suggest that of even great importance is the question of reviving, fostering and developing the confidence of domestic investors in the industrial propositions of India? After the boom of 1919-21, the Indian capital market has been dead as mutton. Such company floatations as we read of are only make-believes. The public have evinced no enthusiasm in 95 percent of such new floatations. If the Indian capital market is to be revivified and if the Indian investors are to be coaxed into industrial investments, Company Law reform must be undertaken without any more delay; and the one man who can do this work with knowledge and with thoroughness is Dr. Matthai.

From our way of looking at this matter, the reform of Company Law is as important for the new constitution as the socalled financial safeguards contained in the White Paper. After all is said and done, financial safeguards might mean the continued maintenance of India's credit in the eyes of foreigners. But what does this amount to? It amounts to this—that India can get the help of others if such help is necessary. Company Law reform would mean that capital from Indian hoards and fastnesses would come out and be available in adequate supply for domestic enterprises. What is the real significance of the thawing of India's frozen capital? The significance is this—that this country would learn the valuable lesson of self-help. Which is to be preferred—self-help at all times or the help of others in emergency? There can be no doubt about the answer. There should be no delay or remissness or half-heartedness in the adoption of all those meausures that would inculcate and encourage self-help so far as the securing of domestic capital for domestic enterprises is concerned. The India of the future would have big economic programmes to carry out. She would need colossal capital for the execution of such programmes. And it is essential that the resources for such programmes are made available from within the country and that conditions are created which would make it possible for such resources to be available.

WEALTH OF CALCUTTA REFUSE

NEW INDUSTRIAL POSSIBILITIES

(BY MR. DEBJIVAN BANNERJI, M.A.)

A comparative study of the fertility of the soil of India as well as those of other countries is useful in understanding the possibility of reclaiming the waste products near calcutta. In a comparative examination, it is best to view the whole thing from a scientific stand-point. The soils of different countries have been analysed exhaustively. But, to our misfortune, no regular analysis of Indian soils was ever made, in spite of the fact that India is one of the largest agricultural countries, and that the Government maintains the agricultural department at a huge cost. Yet, from a layman's point of view, the comparison of the yield of different staple crops will certainly give a good idea, regarding the fertility of the soils. The poverty of Indian soils is very well illustrated by the following figures, taken from an address, given by Sir Alfred Chatterton, some three years ago, at the South Indian Association, Madras.

Comparative crop-yields per acre—India and other Countries :

Wheat—	lbs.
India	605
Japan	1,526
Egypt	1,530
Canada	1,246
Great Britain	2,200

Rice—	lbs.
India	1,295
Japan	3,040
Egypt	2,780

Cotton—	lbs.
India	87
America	155
Japan	180
Egypt	371

Sugar—	lbs.
India	2,400
Japan	3,340
Egypt	3,378
Java	11,988
Hawaii	18,799

The poverty in the fertility of our soil is staggering. It has the lowest yield. This can be vastly improved by the addition of manures. But, the Indian peasantry is ignorant and superstitious. No real education has been imparted to them in this line. It is a noteworthy fact that vast improvements have been effected by the Dutch in the island of Java.

Impermanence of Mineral Fertilisers

The agricultural department has been advocating the use of mineral fertilisers in the country. We know very well that, with the aid of demonstration farms, these imported mineral fertilisers have

SKODA SUGAR MACHINERY

8, ROYAL EXCHANGE, PLACE

Tel: "SKODASTEEL" 'Phone: CAL: 6966

been able to make a little headway, but no real, lasting work has been done as yet; because, it has been fully demonstrated that the use of the mineral fertiliser improves the richness of the soil during that very season only, for, the minerals, which are soluble in water, are washed out, in a large measure, by the rains. If manures be rightly selected and added to the soil, it has been fully demonstrated, at certain places, as for example in the state of Mysore, that the yield of crop per acre, particularly in sugar, is nothing short of 90 tons of 20,160 lbs., which is found to be greater than that of Hawaii (18,799lbs). This was only possible with the use of balanced manure. It might be mentioned here that the canes reached a height of 20 feet. It has been contended by many that, in India, there is lack of its own mineral fertilisers, and owing to the appaling poverty of the peasantry and to their want of education, the soils cannot be largely improved, in respect of fertility, by the importation of foreign mineral fertilisers. The importance of the policy of improving the soils is recognised, but, unfortunately, we have not pursued the policy that can bear fruit.

Balanced Manure

What I want to emphasise is that the end in view can be achieved, if the waste materials of towns and villages be not wasted but utilised properly. These would provide ample manures, so as to fertilise the country-side. It is true that the ordinary ryot cannot afford to buy the mineral fertilisers every year to obtain a higher yield, but he will readily buy such manures, which will improve the fertility of his soil permanently, by the addition of these organic nitrates. I mean the organic manures, obtained from wasted materials of towns and villages. The whole thing boils down to the following:

(1) Mineral fertilisers improve the soil, temporarily.

(2) Organic manures improve the soil, permanently.

Notice has, further, to be taken of the fact that, if mineral fertilisers be used from year to year it has been found that the increased yield of the crop is not maintained from year to year. That is, even with the addition of mineral manures regularly, the yield has been found to diminish. This subject was dealt with, at length, in a review by Dr. G. Ruschmann (*Bienermanns Tentralblatt*, Section A, Part IV, July 1931). Therein, he proves that, with the *constant or increasing* use of nineral manures, the yields are decreasing. Therefore, it is neither profitable nor economical to use the mineral manures. It is best to use the organic nitrates, I mean the organic manures, obtained from the nitrogenous waste materials, which would impart a permanent improvement to the soil. I visualise that, if this wasted material all over the country be utilised, it will bring about an economic revolution, unheard of and even undreamt-of. Just imagine our soil getting twice fertile, giving us a double yield. It will double our export figure. By employing these factors, an economic world revolution can be brought about, which may throw the balance of trade out of equillibrium.

Calcutta's wasted wealth

What I advocate is the policy of utilising the city's wasted wealth. The waste products of the city can be utilised to fertilise the whole country-side; but very little use has ever been made of it.

AGARPARA DEPARTMENT

99, Clive Street, CALCUTTA

Works : AGARPARA, E. B. Rly.

These waste materials are sweepings of households, streets, stables and cattle-shed, factory and workshops and carcases of dead animals.

They consist of vegetable and carbanaceous matter, carcases of animals, refuse from slaughter-houses comprising of bones and flesh, dust rubbish, and mortar and other useless mineral and ferrous metals. The daily quantity, handled by the Corporation, is about 1200 tons, which, at the rate of 45 c. f. t. per ton, will occupy $1\frac{1}{4}$ acres to the height of a foot.

Now, the problem is how to convert this into useful manure, quickly. The utilisation is possible by the principle of activation. By this, it is meant that, with fermentation, reaction is possible. With reaction, there is rise of temperature of the whole mass, which is indispensable for the conversion.

Process of Activation

There is another interesting fact about the application of activation. If we trace the chemical history in this respect, it has to be remembered that Dr. Munro first stated the principle of activation in 1886. He stated that the second stage of nitrification is accelerated when another heap of waste material is added to the original heap, after the first stage of nitrification. Because, the initial temperature of the mass in this case is higher after the first stage and the nitrification takes place more quickly when the third heap is added to the mass after the second stage of nitrification and so on. This has a far-reaching effect on the cost of conversion. It will go to reduce the cost of expenditure. Moreover, the attainment of temperature is an essential of the process. It prevents :—

(1) the growth of larvæ of the insects.
(2) germination of seeds of weeds, &
(3) growth of hookworms and other bacterial growths.

If there is any incomplete, nitrification, the mass has to be turned upside down at certain intervals in order to ensure complete nitrification. This is equivalent to auto-clave.

When we look at the source of supply, we find that all kinds of refuse are dumped together. So the character of the mass is averaged, and made uniform.

Reclamation of boggy lands

The daily total of the waste material of the city, excluding the sewage that has to be handled by the conservancy staff of the City, is in the neighbourhood of 1200 tons.

This dumping has been going on for the last twenty-five years at Dhappa, and during these long years a very rich deposit of manure has been formed there.

Allowing 50% shrinkage due to decomposition, this quantity of daily refuse will, in a month, raise a little over two acres of land to the height of about ten feet, which is sufficient to raise the level of the boggy lands there to the level of the City proper.

Thus, we can reclaim about 25 acres of land annually by street refuse. This land has to be acquired by the Corporation, and there is considerable expense in carriage, distribution and disposal, by dumping, of this refuse. The total expenditure of unloading and disposing of the same by dumping alone is Rs. 10,000 a year, plus the cost of carriage within Dhappa sq. mile, lands beyond Dhappa square mile and the cost of lands acquired for the purpose.

Now, we have to find out means of reducing the expenses to see what best use, of the large deposit of so many years, can be made and if there be any other way of utilising this refuse, which, I say, is no longer refuse, but gold to be used for the profit of the Corporation.

Fertility of the Dumping-Ground

The reclaimed land is very well known to every visitor to the spot. It is uncommonly fertile. This is at present bringing to old lessees Rs. 300 to 450 per acre. The Corporation, according to the old lease, was getting a little over 9000 practically, at the end of the last term, plus a gracious act of unloading on their part. The average yield from an acre of land in Bengal is only about Rs. 40. But, in the case of Dhappa lands, it is about Rs. 800 to the cultivator, and this is as it should be, because this land is a depot of concentrated manure, containing the best balanced plant-food in a quickly available state. The physical texture of the soil is such as would promote the retention of the necessary moisture, and the growth of the plant is possible with very little labour.

In this connection, we should see that, if we go on throwing refuse on new marshy lands every year, after fifty years we shall have no land, at an easy distance from the City, where the refuse can be cheaply and quickly dumped without the carriage being prohibitive. Hence, if we want to confine ourselves to a limited area, we should find whether this deposited refuse can be disposed of as manure or not, and, if so, the same area can be used as dumping ground over and over again.

Analysis of Dhappa Soil

We have no complete analytical figure for the composition of the soil. But an analysis of a single sample of the soil at Dhappa disclosed that it contained nitrate to the extent of about 4%. It is little less than a third of the total nitrate content in Chilean nitrate. Moreover, from the nature of the soil, its texture, and the growth of the plant, its stems and foliage and from the yield of the soil, we may safely guess that the plant-food to be, at least, twenty times as concentrated as the average soil of Bengal. The texture is such that it will be efficacious and useful both to the clayey and sandy soils. With very little propaganda, this manure may very eagerly be taken up by the farmer all over the countryside. This soil contains a large percentage of organic nitrate, which is slowly converted into mineral nitrate, and therefore would be available for a very long time for the plants without being quickly leached away by rains. The special advantage of this soil is the balanced character of this manure, as it contains a mixture of Potassium, Phosphorus and nitrogen, almost in right proportions which, to get from artificial manures, will cost very high. The approximate cost for this class of artificial manure will come up to about Rs. 6/- a maund. Of course in case of the prepared artificial manures, the concentration might be higher, but the prohibitive price makes it unworkable.

Irrigation with Sewage

We may further improve the manurial content, by irrigating sewage-water which flows by channels, already in existence in the Dhappa Fields. The total quantity of the sewage of the City, that is pumped out daily, is very large. In order to activate the deposit, that is lying there, we may utlise one-eighth of the total daily sewage, and to that extant the back pressure, at the Vidhyadhari, would be released which is fast silting up. The channels, from the Town Head Cut to makalpota, are carrying the town sewage, and these skirt round Dhappa. As such, they could be tapped at suitable points and thereby relieve the outfall congestion at the Vidyadhari to a certain extent. Further, the excess liquid sewage could be discharged back into the Town storm-water reservior below Makalpota, and, if necessary, by other channels to the suburban storm-water reservoir, and lands at Hatgatcha could be similarly fed from the sewage channel between point A and the reflux gate. Thus, not an inconsiderable quantity of the sewage could be profitably absorbed in the deposits of Dhappa, to start with. Later on, it is quite probable that, with the increase of irrigation, more of the dry weather sewage can be beneficially disposed of.

Marketing of the Manure

This proposal of marketing the manure is not a new thing altogether. In the City of Bhopal, this compost is sold at Rs. 7/- a ton, and in Rawalpindi it fetches about Rs. 10/- a ton. Further, in Mysore, this compost has been said to have fertilised a very large tract of sandy waste along the banks of the Irwin Canal, an area, no less than 1,25,000 acres.

The area of reclaimed Dhappa lands is about 2000 bighas in all, and the height of the filling is supposed to be 10 feet, and therefore the total deposit in tons is 14,000,000 (One crore and forty lakh tons). The actual price, at which this may be sold, can be definitely arrived at by analysis and investigations. Assessing the deposit at Rs. 10/- a ton, the whole deposit is worth about 15 crores of Rupees. The daily decomposed refuse available is 800 tons, and, assessing the same at Rs. 10/- a ton, the value of the manure is Rs. 8,000/- a day, and therefore the total manure, available for sale, is about Rs. 30,00,000 a year. This proposal, if properly placed on business lines, may fetch such a sum as to meet the total establishment charges of the Corporation. In this connection, I might mention here that Mr. Sawddy, Retired I.C.S., is willing to take up the sales organisation of this manure, if this is marketed.

Value of Sewage

The details of the sewage disposal, that is being carried on in different countries, have not been dilated upon. There is only one activation plant for making Sludge fertiliser at Jamshedpur. A sludge fertiliser plant was installed at Milwaukee at the cost of a Million Pounds, and the sludge Fertiliser, that is sold under the trade name of Mil-organite, fetches a profit of £1,00,000 to the Corporation of Milwaukee.

The utilisation of sewage, in one way or another, has long been practised in France. The native thrift of the French people led them, many years ago- to attempt quite an extensive use of the wastes, collected in cesspools. Victor Hugo's fervid plea, for employing the sewage of Paris in irrigating farms round about that city, was, long ago, realised by works.

The words of Victor Hugo, the great novelist and thinker can bear repitition here, if only as a reminder to City Fathers of the Premier Town of India. Victor Hugo says thus: "Paris casts twenty-five millions of francs annually into the sea; and we assert this without any metaphor. . . . .Twenty-five millons are the most moderate of the approximate amounts, given by the estimates of modern science. Science, after groping for a long time, knows now that the most fertilising and effective of manures is human manure. . . . There is no guano comparable, in fertility, to the detritus of a capital, and a large city is the strongest of stercoraries. To employ the town sewage, in manuring the plan, would be certain success; for, if gold be dung, on the other hand, our dung is gold. . . . Do you know what those piles of ordure are, collected at the corners of streets; those carts of mud carried off at night from the streets; the frightful barrels of the night-man, and the fetid streams of subterranean mud, which the pavement conceals from you? All this is a flowering field; it is green grass; it is mint and thyme and sage; it is game; it is cattle; it is the satisfied lowing of heavy kine; at night it is perfumed hay; it is gilded wheat; it is bread on your table; it is warm blood in your veins; it is health; it is joy; it is life." (*Les Miserables* Book II, Chap. I, Jean Valjean).

OLYMPUS

(From Our Correspondent)

Simla, Oct. 2.

By all tokens, Simla is the cynosure of all eyes, the observed of all observers. We in Simla have now the kind of elation that comes from the feeling that our place is no longer merely of all-India importance but of international significance. We, of course, are accustomed to Indian business magnates coming on a pilgrimage to the hill-tops for securing this concession or soliciting that protection for someone or other of their industries. Whenever our Bombay friends, who have always been most prominent in such missions, come to spend a few days with us, they are extremely nice and sweet and hospitable to us. The men of the press are especially feted and flattered and humoured. It is our luck to-day that we are feted and humoured by the magnates of three countries.

It is all bustle and excitement. Invitations and entertainments. So much of running about is there and so much of dining and wining that one wonders if the purpose of all these happenings is business or conviviality. To tell you the blunt truth, there is a feeling that no one has as yet attempted to come to grips with the real business which has brought the representatives of the two big Empires of the East and West to Olympus.

Some manner of beginning has been made. There were, to start with, formal meetings and set speeches. This process was observed not amongst all the groups together but between two groups at a time. And let it not be forgotton that there are five groups in all, namely, (1) Indian official delegates; (2) Indian business delegates; (3) Japanese Government delegates; (4) Japanese business delegates; and (5) Lancashire business delegates. The formal ceremonies, as can be understood from the above statement, took time to be completed—in fact, it took a good few days.

The next stage is some dimunition in the formality of the talks. We are at the moment in this stage. Frank and heart-to-heart discussions are yet a hope of the coming days. Not till such talks take place could any real approach to solution be expected.

One might say that the Japanese came ready with their plans, well-equipped with information and fully agreed on a common programme of action. For this reason, the Japanese have made a better showing than the Indian side so far.

There is only one matter in which they have allowed gosip to get busy. I have heard it whispered that the Japanese delegates have come without credentials. Others say that they were equipped with credentials but have lost them. Whatever be the truth, it is apparent that the delegation will lose its weight and authority if it did not possess credentials to sign any agreement arrived at as a result of these conversations.

It is already clear that the Japanese know every inch of their ground. They know the position of Lancashire and they know the strength and weakness of the Indian case. Hitherto they have shown no great anxiety to get into grips with the subject. As their leader told me, "I am not hurrying. I will go slow."

Their plan seems to be to take the initiative every time and watch the reaction of the same. The

Indian delegation will thus be constantly put on the defensive.

The Japanese tactics led to an amazing situation. The Japanese leader started his negotiations with the proposal that they should have the *status quo ante* with such modifications of the Convention as were necessary. The Indian side was not equipped with an answer to this. It is true, Sir Joseph Bhore was then ill but then the fault lay in that the Indian side had not yet prepared its case in all its bearings and its spokesmen were not equipped with an answer.

There is another defect in our organisation. The Japanese representatives, whether official or businessmen, all know each other's point of view and take a common stand. The Indian Government has not called the non-official advisers yet into detailed consultation ; and no attempt has been made to strike out a national line for negotiation.

Still another point in favour of the Japanese. Round the table they hear the Indian side in English and they exchange views among themselves in Japanese. One reason advanced is that all the Japanese delegates are not equipped with a proper knowledge of English and that consultation in Japanese is necessary. But the fact of the matter is that, in this respect, they have a pull over the Indian side who can consult only in the language which the Japanese understand.

And, finally, the Japanese score in respect of press publicity. They have brought with them seven Japanese correspondents who will keep their country properly informed about what is happening in Simla. His Excellency Sawada did another brilliant act. His first public engagement in Simla was to call to lunch Indian and British press correspondents and establish personal contact with them so that the Japanese case may get a due and proper hearing.

The Lancashire Delegation extended the same compliment to the press.

Everyone here knows that the negotiations are of a triangular nature. Japan holds that if India looks five years ahead, her best interest lies with Japan as she alone can help to buy her raw material. That is an important card in their hand, especially as agricultural interests are involved.

But if India looks fifteen years ahead, her best chance lies with shutting her frontiers to Japan and bargaining with Lancashire. Japan is ready with her answer to the latter scheme. If she loses the Indian market, she makes a bid for the Lancashire markets outside the British Empire. And so Whitehall becomes alert and wishes the Indian negotiations not to fail.

There is a story going round here that Lancashire interests are prepared to influence the British Government to shut Japan out of East Africa so that Indian piecegoods may find an outlet there. Lancashire also argues that Japan wants time to find her own raw cotton and, that instead of giving her time and enabling her one day to replace Indian cotton, it is in the interest of India, even if sacrifice of cotton growers' interests is involved for a year or two, to go ahead with the policy of expanding her home market so that India may consume all her surplus raw cotton and Lancashire may take in as much as she can.

But when all this is said, there remains one all-important point, namely, that negotiations of this character cannot end in a deadlock if the parties concerned are prepared to accommodate each other's point of view. Japan has come with that definite purpose. She wants to have her trade with India and she is prepared to go to the maximum limit of bargain for the purpose of making a success of these negotiations.

And the delegates who have come from Japan are excellently equipped for the purpose. His Excellency Sawada is the only grey-haired delegate ; the others look very young. His Excellency speaks English fluently. He has been in the diplomatic line for twentyfive years ; and, what is more, he is a Christian. As a Japanese delegate told me, they let their Christian brethren attain proficiency in the English language for international purposes.

But Mr. Sawada is an ideal leader. He will not move an inch without consulting the Secretary-General of the Japanese Delegation. And the Secretary-General keeps all the strings in his hand. So that admirable team work results.

Whatever the view of the Japanese case, there is no doubt that the delegates who have come here deserve well of their country and that they have created an excellent impression in Simla. If their spirit infects the Indian side, it will be some achievement.

The Indian case is very simple. Indian industries have every right to expect their Government to protect them from any foreign country which is, for some reason or other, able to sell goods at prices barely covered by domestic costs of production. It is no answer to say that the industries in question are not 100 per cent. efficient. To have a chance for proving their capacity to attain that efficiency, they must be first ensured of a safe tenure of life. Japan's competition has affected that very tenure of life. The question of efficiency is a matter between the industrialists on the one hand and our Government and our public on the other. But the question of their continued life is a matter on which neither the Government nor the people could take a light-hearted view. Efficient or not, national enterprises should be, and shall be, protected against international competition of a cut-throat nature.

Lancashire's case is that India stands to gain by seeking alliance with Empire interests. Except Mody and Company, most others are sceptical about this proposition. But Lancashire has vocal Bombay and puissant Simla on its side.

Japan's case needs elaborating at some length. India complains that her mill industry has been adversely affected. The facts prove the exactly opposite conclusion ; over the Japanese who point to the statistics of spindles, looms, yarn production and cloth manufactures. The following table is put forward by Japan in refutation of the charge :

INDIA'S COTTON MILLS :

	Working spindles	Working looms	Cotton yarn output (In bales)	Cotton cloth output (On 1,000 yards)
1914 ...	5,848,283	85,158	1,706,942	1,164,291
1917 ...	6,067,770	100,824	1,702,768	1,578,132
1920 ...	6,238,771	105,169	1,589,400	1,639,773
1923 ...	6,760,218	120,806	1,764,733	1,725,284
1926 ...	7,264,234	136,033	1,716,068	1,954,462
1929 ...	6,957,389	133,882	1,620,740	1,893,261
1930 ...	7,979,454	156,662	2,083,899	2,418,981
1931 ...	8,093,714	157,609	2,167,611	2,561,133

Not do Japanese imports form anything more than 20 per cent. of India's production, as will be seen from the table given below :

COTTON CLOTH PRODUCTION AND IMPORTS OF INDIA

Year	Cotton Cloth Production in Indin	Total Cotton Cloth Imports	From England of Total	From Japan of Total
1913 ...	1,164	3,197	3,104	9
1914 ...	1,136	2,446	2,378	16
1915 ...	1,442	2,184	2,049	36
1916 ...	1,578	1,934	1,786	100

1928 ...	1,893	1,937	1,456	357

BABCOCK BOILERS

A WARNING

The name "Babcock & Wilcox" as applied to boilers, is of such long standing and is so well known that to many people it denotes a type rather than the specific make of boiler.

As a result we wish to point out that boilers bearing our name can only be obtained from us or our licensees. There are some boiler manufacturers who, for want of any intrinsic merit in or originality of their own designs, describe their products as being "Babcock & Wilcox Type". Whilst we appreciate the compliment, we wish to warn prospective purchasers that only genuine Babcock & Wilcox Boilers, designed and manufactured by us, have the advantage of Babcock Engineering, Babcock Experience, Babcock Patents, and Babcock Service in looking after the installation when it has been made.

1932-33* ...	63	193	138	394

*8 months only.

On the other hand, Japan is India's best customer; the total value of exports from India to Japan during the 32 years from 1900 to 1931 amounted to 7,609,000,000 rupees, while the value of imports from Japan as 3,347,000,000 rupees. The statistics of the Japanese Government show that during the 37 years from 1896 to 1932, Japan's exports to India amounted to Y. 2,673,000,000 and imports from India to Y. 6,337,000,000, giving an excess of imports of Y. 3,664,000,000.

The foreign trade as between India and Japan is given below for the years 1896 to 1932:

JAPAN-INDIA FOREIGN TRADE 1896-1932

(In Y 1,000)

Year	Exported to India	(Imported) from India	Total	Imports Excess
1896 ...	4,537	22,517	27,054	17,890

*Estimate.

If the present attitude of India is persisted in, Japan asserts that she will and can boycott Indian raw cotton. The ban on Indian raw cotton will not be costly, declares a writer in a textile supplement issued by the Japan Advertiser. It is claimed that the change-over can be made with a little trouble and that the substitution of more expensive American cotton will be accompanied by marked savings in handling cost and sharp upward movement in production. Again and again, with greater and greater vehemence, it is declared that unless Britain changes its policy, Japan must boycott Indian cotton. If it is true that there will be certain disadvantages in purchasing American rather than Indian cotton, they are not too great to be borne. The following is the line of argument adopted by Japan:

> If America cotton alone is used, the actual cost of the material will rise Y. 13,600,000 but it must be remembered that production will rise 22 to 23 per cent. because of the change and the actual cost of handling will be cut 15 per cent.
>
> The average cost of producing yarn of below 20 counts with Indian cotton is Y. 21.50 a bale, excluding the cost of the material. With American cotton this will be cut by about Y. 3.20. There will thus be a saving of Y. 5,370,000. Everything considered, the net loss to the Japanese spinners from making the change will be between Y. 5,000,000 and Y. 6,000,000. Moreover heavier purchases of American cotton should result in greater purchases of Japanese raw silk exports and the exchange market should be further stabilized.

There are other boycott weapons which Japan seems to contemplate. Director S. Kanzaka refers to the demands, in certain quarters of Japan, for a boycott against Australian wool as a counter-measure to the so-called British economic bloc. Mr. Kanzaka writes:

> The Mitsui Bussan Kaisha, alive to possible developments in the wool import situation, has decided to send Mr. Yoshitsugu Owa, one of its officials, to South America for an investigation of the wool industry there in preparation for the purchase of South American wool. The annual consumption of wool in Japan totals more than 700,000 bales, of which 90 per cent. are imported from Australia and the remaining 10 per cent. from South Africa and South America.
>
> Japan was the heaviest buyer of Australian wool last season, which came to an end on June 30, in Brisbane. The total amount sold was 693,000 bales, of which companies belonging to the Wool Industry Society

(From Our Correspondent)

Bombay, October 3.

The travails and troubles of the Currimbhoys developed into a first-rate crisis towards the end of September. And the industrial structure of Bombay has suffered a most severe shock.

At the time of writing, it is difficult to say whether the damage caused could be mended to any extent or will prove irreparable. The gravity of the crisis is in direct proportion to the importance and puissance that belonged to the old and trusty house of Currimbhoys. The concerns embraced in the crash are over a dozen ; the finance involved is in crores ; the interests affected are legion ; and the repercussions are bound to be widespread.

The fall of a lesser firm would have been within the power of resilient Bombay to stand up to. If you slip from the top of a table, you escape with bare bruises ; but if you slip from Mount Everest. . . . . I need hardly complete the sentence.

There are, however, three propitious circumstances, relying on which, one could hope that some manner of solution would be found.

First, the affairs of the concerns, controlled by the Currimbhoys, may be bad off ; but they are all clean and above board. No unpleasant disclosures need be feared. The tragedy is a tragedy of the time which has been truly out of joint. The Currimbhoys put up a stupendous and courageous fight against heaviest odds. If they have fallen, they have fallen like heroes, fighting to the last ditch. The next firm to take up the concerns will have an easier task because, in the reconstruction, the unhealthy and unwholesome features would be chopped off.

Second, a good few of the concerns now overtaken by disaster are eminently suitable for reconstruction. The changes needed are only on the financial side. On the side of machinery, organisation and technique, the Currimbhoy group were amongst those in the front rank. This means that firms equally noted would be only too glad to come forward and take up the management under the new conditions.

Third, Mr. F. E. Dinshaw has already actively bestirred himself in this matter. What Mr. Dinshaw could not do by way of financial succour and replanning, nobody else in India can do. He is the wizard of finance. He is himself very, very rich. Other rich men have the fullest confidence in him. Whatever the amount of new money that may be required for any proposition that has a reasonable chance of success, Mr. Dinshaw could always find it. But he is more than a financier. He is a shrewd laywer, experienced in business, and loyal to friends in distress. There is nothing he would not do, to enable the Currimbhoys to emerge from the crisis with reputation unscathed, and to protect Bombay from the devastating effects of a complete collapse.

Yesterday the word of Currimbhoys might have stood against the world ; and now lie they there, but with men like Mr. F. E. Dinshaw eager to do reverence. Herein lies hope.

It must be admitted, however, that Mr. Dinshaw has before him a task of no ordinary difficulty. In the past twelve years, he was called to lend a help-

ENGINEERS ∴ LIVERPOOL ∴ ENGLAND

ing hand on more than one occasion ; and his support has proved unavailing owing to the persistent and progressive deterioration of Bombay's premier industry.

When the Omar Sobhani Syndicate came to grief in their cornering of cotton in 1921, it was Mr. Dinshaw who took up the entire matter on hand, arranged a loan of over half a crore, and helped Omar to honour all commitments. Had the textile industry improved, the loan would have been paid off ; the managing agency of Appollo and Elphinston reclaimed ; and the Sobhani family restored to their old status and position. The properties mortgaged declined headlong in value ; and all hope of redeeming vanished into thin air.

When Mr. Mathradas Goculdas met with colossal reverses both on the stock and cotton exchanges, Mr. Dinshaw did all he could ; and Sir Fazulbhoy Currimbhoy took on the agency of six mills. But both Sir Fazulbhoy and Mr. Dinshaw had to carry the babies. And Mr. Mathradas could not by any chance recover.

Sir Fazulbhoy, in bravely launching out to save the drowning Mathradas, has himself been engulfed by the treacherous waters.

Whenever it is reported that one, in endeavouring to save a drowning man, was himself drowned, our heart is strangely and profoundly moved and we offer the fullest measure of admiration. The collapse of the Currimbhoys moves me as strangely and as profoundly ; and I bow down in reverence and awe and admiration before this tragedy.

The Currimbhoys showed a big heart in rushing to the succour of a fellowbusiness house ; and they showed rare pluck in carrying the double load. All honour and glory to them ! They have lost a great fortune ; but they have gained an imperishable name.

Omar, Oosman and their aged father ; Mr. Mathradas Goculdas ; and, now, Sir Fazulbhoy and his sons and cousins—they illustrate that it is worth giving up all tangible possessions in order to retain the intangible but most worthy asset of credit and honouring of plighted word.

As I write of this sad story, I could appreciate what Aeschylus or Shakespeare should have felt at the conclusion of their labours over their great tragedies.

A tragedy in the Greek or Shakespearian style is said to purify the heart, ennoble the mind and stimulate the emotions. There is pain—but pain that you like to have and endure. The tragedy of the Currimbhoys is, I have no doubt, a tragedy of this kind, to warm our heart and uplift our mind.

I append the following particulars, from the *Times of India*, regarding the concerns under the Managing agency of the Currimbhoys :

The firm of Currimbhoy Ebrahim and Sons, Limited, has played quite a conspicuous part in the development of the cotton textile industry not only in Bombay but also in other parts of India and in Ceylon. They have under their control at present eight mills and one bleaching, dyeing, and printing factory in Bombay, one mill in Indore, one working and another under construction in Hyderabad State and one in Ceylon. The total subscribed capital of the mills under their management is Rs. 2,11,00,000, with a total number of 5,38,048 spindles and 12,356 looms. They afford employment to over 20,000 hands.

Of the eight mills in Bombay, four had to shut down owing to the prevailing depression, namely Premier (since 1929), Currimbhoy and Crescent (since March last) and Ebrahimbhoy Pabaney (since June last). The remaining mills which are still working are Fazulbhoy, Pearl, Bradbury and Kastoorchand, besides the Indian Bleaching Works. At Indore they have the Indore Malwa United Mills, in Hyderabad State the Osmanshahi Mills with the Azam Jhai Mills under construction, and in Ceylon the Ceylon Spinning and Weaving Mill.

The following table gives at a glance the subscribed capital and the number of spindles and looms of the Currimbhoy group of mills:—

	Capital Rs.	Spindles	Looms
Currimbhoy ...	22,00,000	82,440	1,448
Pabaney ...	20,00,000	56,408	1,054
Crescent ...	15,00,000	44,688	1,068

WORLD OF INDIAN FINANCE

Calcutta, October 13.

Money conditions have been quite easy in Calcutta. Compared to the tremendous upheaval through which the money market in Bombay passed in the current week, Calcutta is lucky to have had an even tenor of happenings. As will be seen from the communications of our Karachi and Bombay correspondents appearing elsewhere in this issue, the market in those centres was dominated by the crisis in the affairs of the Currimbhoy House and its repercussions. Though the Currimbhoys have a branch in Calcutta and have had extensive dealings in the cloth market, the money transactions involving banks or bazar parties have been, fortunately, negligible. For this reason, Clive Street did not at all feel the effects of the shock which has caused such havoc in the two centres in Western India. It is difficult to understand why the difficulties of the Currimbhoy group of cotton mills should have occasioned the severe raids on banks in Bombay. That the Currimbhoys were in difficulty has been known to bankers for a few years. Long ago, the troubles of this firm reached such a serious stage that the Nizam had to come to their rescue nearly five years ago. It follows that banks were cautious in their dealings with the Currimbhoys ever since it was known that matters had come to a pass to necessitate the assistance of the Nizam. It may be said that bankers were fully forewarned and, therefore, adequately forearmed. From the enquiries we have made, we are assured that no bank is involved in the Currimbhoy tragedy for any amount which may be considered to be on the large side. Such loans as have been given by banks have been, in most cases, suitably secured. Our Bombay Correspondent makes this point very clear and says definitely that the banks as such are unaffected and that it is only the bazar parties whose deposits in the various mills will stand to lose.

It is, therefore, extremely regrettable that on the basis of rumours without any foundation whatsoever, pressure of such an acute kind should have been exerted on banks whose own liquid position is such that they can meet demands of far fiercer proportion than was experienced in the current week. The combined liquid resources of the Central Bank of India and the Bank of India amount to nearly Rs. 25 crores. The knowledge that such large liquid resources are held should be sufficient to dispel all nervousness on the part of depositors. As we go to press, we understand that the situation in Bombay has become normal. Short money which shot up to 5 per cent. is again in comfortable supply at ½ per cent. The runs have completely subsided, the ability of the banks to meet all demands fully and promptly has been triumphantly vindicated. It is reported that a good many of the depositors have begun to return their funds.

While it is quite possible that, so far as banks are concerned, no more panicky outbursts on the part of the public need be apprehended, there is yet much to be done by way of clearing up, and smoothening, the complications that have arisen from the Currimbhoy **debacle.** The stock exchange of Bombay has, for the time being, suspended all forwards trading; only cash transactions are being put through. Mill shares are, accordingly, subject to a definite bearish influence. As for the shares of the Currimbhoy group, their future is entirely dependent upon the kind of financial reconstruction that is decided on and on the type of new managing agents to whom the Companies are transferred. This crisis has also affected the giltedge market, though one would have thought that the very lack of confidence in industrial shares must have acted as a stimulus to giltedge prices. But, a good proportion of the operators in the Bombay share bazar are also interested in giltedge; and when they had difficulties owing to their commitments in the Currimbhoy shares, they had, possibly, to dispose of their giltedge holdings in order to make up for the losses in industrials. We should also think that the professional bears both in Calcutta and Bombay have made the fullest use of the crisis to beat down prices in the giltedge market. Considering that 3½ per cent. Rupee Paper was lower in Calcutta than Bombay, one is driven to the conclusion that bear tactics have been in much greater prominence in this City. Towards the finish, however, a reaction was manifest. There has been good enquiry for government securities on Friday, dealings in 3½ per cent. Rupee Paper being reported at Rs. 83-10. There can be no doubt that but for these unsettling developments, rupee giltedge securities should have shown marked rise. The market for India sterling securities has been buoyant. 3½ per

cent. India sterling paper is quoting £87⅛ at the time of writing. There is, thus, a disparity of four points against the Rupee Paper. This is altogether an abnormal state of affairs. When the public have a clearer appreciation of the intrinsic factors in the market situation, the higher prices of India sterling stocks cannot fail to exert a strengthening influence on rupee stocks.

There is a definite change in the market's sentiment towards Treasury Bills. Applications received on the tender day are barely higher than the amount on offer. Intermediates sold in between tender days make a poor showing. It has been necessary to offer higher yields. Tenders last Tuesday came to Rs. 1,71,75 lakhs against Rs. 1½ crores offered. The average rate of accepted tenders came to Rs. 1-1-9 as against As. 15-5 in the earlier week. This must be considered a steep rise. The rate for intermediates has had to be put down from Rs. 99-12-6 last week to Rs. 99-12 in the current week. It is obvious that the market's idea of a suitable yield on Treasuries is now nearer 1½ per cent. than 1 per cent. Unless the Government are prepared to appreciate this point of view, they cannot hope to effect any large sales. Intermediates sold up to last Monday came only to Rs. 10½ lakhs. It is the best indicator of the direction in which the wind is blowing. From the way in which the Controller of the Currency has been showing his readiness to increase the attractiveness of Treasury Bills on the occasions when the response of the public was poor, we should think that the authorities are in close touch with the market's ideas in this matter. The ways and means advances availed of by the Treasury from the Imperial Bank has, as forecasted in this column last week, risen from Rs. ½ crore to Rs. 4½ crores. This increase is to be accounted for by month-beginning outgoings, and the large sterling purchases of the earlier week. Unless the Treasury Bills sales in the coming weeks are for appreciable amounts, there is no early prospect of any reduction in the ways and means advances. On the contrary, the Government may have recourse to this facility in increasing measure as Maturities in the coming week are nearly Rs. 4 crores.

NOTICE.

The Reserve Bank Supplement will be issued in the course of the next week.

The Supplement will be supplied free to subscribers. Extra copies required by subscribers will be priced Rs. 2. Non-subscribers will also be charged Rs. 2 per copy.

Those desiring to order for the Supplement are requested to register their requirements in advance.

EDITOR.

The exchange market has been quiet. The prevailing conditions were dull, though somewhat steady. It will be correct to say that the market was altogether featureless, with business of the meagerest description. There were a few bills offering but at rates which banks would not touch. There has been no demand for enquiry from the public. However, a fair amount of interbank business was done. On the sterling tender day, applications for £800,000 were received at 1s. 6 1/16d., and allotted in full. The amount on offer for next week continues to be £1 million.

The closing rates are: 1s. 6 1/32d., October-November T.T.; 1s. 6d., December-January T.T.; 1s. 5 31/32d., February-March T.T.; and 1s. 5 15/16d., for positions onwards.

Bills may be quoted: 1s. 6 7/64d., right up to February.

Money was quite easy, with the quotable rate for interbank call money being ½ per cent. In Bombay short credits were done up to 5 per cent. Towards the finish, however, rates receded to ½ per cent. Onemonth, twomonth and threemonth deposits are quoted 1,1, and 1¼ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(By Wire)

Bombay, October 12.

Money conditions tightened about the middle of the week and call money rates improved from 1 per cent., ruling till then, to about 5 per cent. Towards the close, however, somewhat easier conditions prevailed when 3 per cent. was quoted for call.

Tight money strengthened the rupee rate from its earlier weakness caused by forward speculative purchases. Though ready T.T. is better at 1s. 6 1/32d. the forward position continues weak at 1s. 6d.

Karachi, October 12.

After having ruled easy, money became tight. There was a mild run on the local branch of the Central Bank. The demand however was readily met on the counter. The Imperial Bank was always ready to offer any assistance. The situation has considerably eased and money rates have come down to more reasonable rates.

The exchange market continues featureless with ready T.T. quoting 1s. 6 1/32d.

MADRAS MONEY MARKET

Exchange rates fell away at the commencement of the week chiefly as a result of the announcement of the formation of the Currency League. The effect of this announcement was short lived however and quotations for near deliveries are now back to the levels ruling a week. Forward rates are a shade easier and there are some bank buyers of March at 1s. 6 1/32d. T.T. and of June at 1s. 6d. T.T. The continued fall in groundnut prices has restricted business and few export bills have come on the market.

Money is in fair demand at 1 per cent. for call.

FINANCE ABROAD

	Sterling Franc rate	Sterling Dollar rate	London Price of gold
October 5 ...	78.90	4.74⅜	133s.8½
October 6 ...	78.71	4.74½	133s.8½
October 7 ...	79.09	4.69½	133s.4d.
October 9 ...	78.96	4.69⅝	133s.1d.
October 10 ...	79.03	4.69⅝	133s.9d.
October 11 ...	79.28	4.65½	133s.1½d.

The principal international exchanges have seen a reversal of the tendency of last week. The sterling dollar rate has come down from the high level of 4.74⅜ to 4.65½ at the end of the period under review. Likewise, the sterlingfranc rate has improved from 78.90 to 79.28. The changes in the sterling price of gold have not been appropriate to the trends in the sterling franc rate. While the latter has gone up from 78.96 on the 9th to 79.03 on the following day, the price of gold has actually risen from 133s. 1d. to 133s. 9d.

The fluctuations in the international exchanges during the last months suggest clearly that this autumn must be a period of grave instability. And the situation, as it stands today, points to a continuance of such instability over a longer period. So far as Great Britain is concerned, the prospects of an agreement between her and America in regard to the stabilisation of exchanges are, in fact, less than they were ever before. All eyes are turned to the talks which Sir Frederick Leith-Ross has commenced with the American authorities on the question of the War Debt payment. There is as yet no indication of the course that such talks would follow, and much less of the ultimate event thereof. Reports are, however, circulated in the dailes that Sir Frederick might suggest to America a lump sum of £200 million. It is calculated that the payment of thousand million dollars, which is the equivalent at per of the £200 million, will represent the principal and interest, less all previous payments and less 3 per cent for depreciation of the dollar. It need not be added that, if the American authorities should see their way to accepeting this offer, the British Government contemplate the floating of an international bond issue in respect of this payment. The Debt Funding Commission fixed the total war debt payable by Britain to the United States at 4,604,128,085 dollars (£920,825,617 at par) of which 4,128,085 dollars (£825,617 at par) was to be repaid at once in cash and the balance funded at 3 per cent for 10 years and 3½ per cent afterwards until redeemed by the operation of an accumulative sinking fund of ½ per cent in 62 years.

What are the prospects of the Roosevelt Administration accepting this offer of the British Government which, as compared with the debts settlement referred to above, involves stupendous losses for the United States? In attempting to answer this question, one cannot help recalling that a golden opportunity of settling this problem and, what is more, avoiding the chaos of currencies and exchanges, that is now upon the world, was wasted in the early part of this year. Time was, indeed, when the American Government was anxious to pursuade the British Government to agree to a stabilisation of sterling in terms of gold and was even prepared to pay a consideration for such a benefit. The United States had then a lively sense of the damage which depreciated sterling can wreak on the export trade of America. On the possibility of resuscitating American industry through a depreciation of the exchanges abroad and an inflation of currency at home was not thought of in any responsible quarters. In fact, from the time the Preparatory Committee of the World Economic Conference met in the middle of 1932 America had exerted herself to the utmost in co-operation with France to bring Great Britain to agree to some scheme of the stabilisation of the value of sterling in terms of gold and gold currencies. At that time, Britain held her head, at once shyly and haughtliy, and declined to comply with the requests of France and America. It was thought that, as a result of the benefits flowing from the depreciation of sterling, the revival of government securities, the completion of large schemes of conversion, an expansion however little of the export trade at the expense of some of her competitors, Britain could afford to dictate terms to the nations. In this view the spokesmen of Great Britain formulated a long list of conditions which ought to be satisfied by France and America before she could agree to stabilise sterling in terms of gold. It was pleaded in defence that in the absence of such conditions stabilisation of sterling would mean that Britain incurred the grave risk of being thrown off the gold standard with far more disastrous consequences than were feared in September, 1931. But no body stopped to think that the conditions, such as were demanded by Great Britain, could hardly be guaranteed by any one or more nations. Now that opportunity has passed ; and America is fully equipped to beat the British in their game of currency depreciation. Thus Britain is dependent on America in regard to her exchange policy. In the latter country, the future is even more hazy. Though for the present it might be taken that President Roosevelt is keen on avoiding inflation in its grosser forms, there is no certainty that a further relapse in business or the considerable import surplus revealed in the August trade returns will not have the effect of relating the inflationist forces and making them too strong for the President to withstand. In that event, the uncertainty will have a lamentable effect on all the exchanges. Thus Britain and America are inter-locked in grave uncertainties of currency and exchange.

Even the position in France, with her decided inclinations towards the deflationism implied in the adherence to the gold standard, there are many unsettling factors present. The exchanges during the last two months have given a great fillip to the tendency to hoard gold. Already the Bank of Amsterdam insists in the case of every demand for gold on the production of a certificate from the central bank for which the gold is intended. These regulations have been circumvented by withdrawing the gold and despatching to the Bank of England and then withdrawing the bullion from the latter and shipping it across to London. In London, as a result of the enormous inflow of gold and the premium which that market offers over and above the price justified by the prevalent sterling franc rate the position might soon demand the attention of the authorities. The regulation of the Currency Act which gives the Bank of England the right to demand the gold holdings of over the limit of £10,000 belonging to persons resident in England was intended more to prevent the accumulation of gold by the clearing banks than to check the growth of hoarding amongst the individuals. For it was believed not without reason, that the average Britisher is not anxious to hoard gold. But now signs are not wanting that the limit of £10,000 for each individual is being availed of by large families and concerns with a large staff to accumulate gold much over the limit and thus evading the regulations of the Currency Act. With France faced with another huge deficit of 6 milliards of francs and the Chamber in no better mood to tackle it properly, with Britain growing restive under the inflationist effect of the vast inflow of gold and the premium on gold susceptible to sharp changes owing to the prevalent sentiment about any possible action by the authorities in Britain, grave instability of the international exchanges in the coming months is foreboded. The only consolation is that so far as France is concerned, there is no danger of any devaluation before the end of the current year.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3¾ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent).

Thursday, Sept. 21.

In the early part of the week Tea shares continued to be fairly active but towards the close the enquiry, however, seemed to be less. Rubber was somewhat firm while Jute shares were quiet.

Government Securities.—These shares were weak 3½ per cent. paper weakening to Rs. 82-15, 4 per cent. 1960-70 loan was easy at Rs. 98-2, 5 per cent. 1945-55 remained in demand at Rs. 113-10, 5 per cent. U. P. Bonds (1944) Rs. 106-14, 4 per cent. Punjab Bonds (1948) Rs. 99-9, 5½ per cent. 1938-40 Rs. 107-10, and the 4 per cent. 1934-37 Rs. 101-12.

Jute.—Very steady conditions prevailed in these shares Howrahs moved up to Rs. 48-8, Kamarhattys improved to Rs. 457, Aucklands quoted Rs. 167, Kinnison Rs. 605-8, Naihati Rs. 360, Anglo-India Rs. 349, Union 362, Cheviot Rs. 208-8, Kanknarrah Rs. 425. Clives accounted for some business around Rs. 25-12, Nationals Rs. 21, Presidencies Rs. 5-2.

Coal.—Very little interest was taken and prices showed no change. Buyers, too, displayed no interest and rates were on the downward grade. Bengals were on offer below Rs. 230, Equitables dropped back to Rs. 19-8, Talchers to Rs. 1-12, Raneegunge Rs. 40-4, Ghusick and Muslia Rs. 2-15 Mundulpur Rs. 4-4, Burrakurs Rs. 13-12, Beerbhoom Rs. 11-4, Sendras were easier at Rs. 9-2 while South Karanpura were marked back to Rs. 4-6.

Tea.—There was an active demand in these shares in the early part of the week but towards the close, enquiry had fallen on considerably, Gohpurs continued to be in demand at Rs. 8-2, Hantaparas showed further improvement at Rs. 477-8, while North Western Cachar were marked up sharply to Rs. 290.

Banks and Railways.—Imperial Bank's fully paids quoted Rs. 1,225 and the Contributories Rs. 302, Allahabad Banks quoted Rs. 327 and Rs. 160, Central Bank Rs. 23⅜, Bank of India Rs. 105¾. In Railway shares Baraset Light Rly. quoted Rs.56, Sahadara (Delhi) Saharanpur Rs. 119, Darjeeling Himalayan Rs. 71, Arrah Sasaram Rs. 66, Sara Serajgung Rs. 3/8 and Burdwan Cutwa Rs. 74.

Cotton.—These shares remain unchanged, Kesorams quoting Rs. 3-3, Mohini Mills Rs. 3-14, Bengal Luxmi Rs. 66, Muir Rs. 245, New Victoria Rs. 1¾, Elgins Rs. 54 and Benares Cotton and silk Rs. 1 5/16.

Miscellaneous.—Bengal Telephone (Ordy.) continued to be in request at Rs. 17-8, Bengal Iron were steady at Rs. 3-4, Indian Iron and Steel changed hands at Rs. 4-10, Kumardhubi Engineering (Ordy.) quoted Rs. 1-14, Titaghur Paper (Ordy.) Rs. 15-4, Calcutta Landing and Shipping Rs. 6-12, Bengal Flour Rs. 103, British Ceylon Corpn. Rs. 6, B. I. Corpn. As. 12, Indian Wood Products Rs. 32-4, Calcutta Tramways (Ordy.) Rs. 16-8, Midnapore Zemindary Rs.64. In sugar shares, Carew & Co., were on offer at Rs. 14-4, Balarampur Rs. 11-8, Champaran Rs. 24-8, New Savan Rs. 13. There was a very good enquiry for Rubber shares and the general tone was firm.

MADRAS STOCK EXCHANGE.

(*By Wire.*)

(From Our Correspondent).

Madras, October 12.

The securities market was weak in sympathy with the events of the Bombay Stock Exchange. 3½ per cent. Paper rapidly fell away, the lowest touched being Rs. 82-14. There was good short covering on Bombay account up to Rs. 98-9 though it closed earlier at Rs. 98-6. 5 per cent. 1945-55 was another bright spot at Rs. 113-11 in the short-dated bonds. 5½ per cent. 1938-40 changed hands up to Rs. 107-12-6. Mysore Loans were a shade easier at the lowest levels. Good investment support was forthcoming in Port Trust and municipalities. There was an isolated deal in 4 per cent. Madras Corporation 1950 debentures at Rs. 95-12.

Amongst fixed interest bearing securities Buckingham and Carnatic Preferences noted deals at Rs. 138-8 Rs. 134-12 and Spencers. A preference shares at Rs. 9-6. As in previous weeks, a large business was completed in Tata Iron second preference shares with Bombay buying on this market at Rs. 100, the highest touched being Rs. 101. Coimbatores were opened at par whilst Singareni collieries were wanted at Rs. 2 premium.

Imperial Banks were steady. Fully paids changed hands at Rs. 1,230 and the Contributory at Rs. 300 mainly on Bombay account. Bank of Indias and Central Banks fell to about Rs. 100-12 and Rs. 22-12. Mysore Banks noted deals at Rs. 217 and Indian Banks Rs. 10 paid, at Rs. 18-6.

Cotton shares were easier. Buckingham and Carnatics were lower at Rs. 175. Coimbatores fell sharply five points after the business was done at Rs. 55. Sellers were prepared to accept even lower prices. Maduras exceptionally were better at Rs. 35 with no sellers.

Amongst electric supply company shares, Trichy Srirangams were taken up at Rs. 147 cum-dividend and Vellores at Rs. 9-8. There were buyers for Rangoon Electrics at Rs. 23½ cum-dividend without anything offering.

Cements noted no business whilst sugars were a quiet market. Deccans Old were offered at Rs. 277½ and the New at Rs. 65 without attracting attention. Mysore Sugars were done at Rs. 8 and Rs. 8-2. East India Distilleries ordinary at 23s. 6d.

In Rubbers Malankaras improved 3 points to Rs. 30 and Cochin Malabars ordinary jumped 4 annas to Re. 1-1 with buyers over.

Teas were neglected.

In the Miscellaneous section, Burma Corporations were better at Rs. 9-4 ex-dividend. But Singarenis were offered freely at Rs. 7-14. The markets closed with a quiet undertone in most sections due mainly to the approach of the Deepavali holidays.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bombay, October 12.

Altogether a steady tone prevailed in giltedged securities. Government 3½ per cent. Papers touched the highest at Rs. 83-7 against their last close of Rs. 83-4. The lowest during the period was Rs. 82-12 touched yesterday on lower London advices but again firmed up to-day to Rs. 83-5. Forward business in shares continues to be closed. Even squaring-up transactions were disallowed. Brokers have been doing their bit to tide over difficulties. Two of them have already been declared defaulters while five others are trying to compound with creditors. For a return to normality it is imperative that the exact position of Currimbhoy group of mills should be ascertained. For the public, there are enormous difficulties ahead. In the cash section there is consistent demand for Tata Steel second preference shares and they closed at Rs. 102-4. Other scrips are comparatively steadier.

JUTE AND JUTE GOODS

JUTE

Re-opening after the Puja holidays the jute market in Calcutta has ruled easier with lower values and a declining tendency. Business was done by Shippers in ready Firsts near Rs. 25-8 and Rs. 25-12. Buyers, however, are satisfied at the moment with sellers at annas four less.

The weakness in the market has been due partly to the hedging pressure and partly to the weakness in commodity markets in general.

The weakness in cotton, want of substantial business in jute goods and troubles with some of the banks in Bombay and Calcutta had had a nervous feeling in trading circles, with due repercussions on stocks, shares and commodity markets.

The seasonal arrivals of raw jute are plentiful, and mills in Calcutta in view of the declining prices of Heavy goods, and weak tone of hessian forward positions, are not in a mood to negotiate any substantial business in raw jute. They only buy at dips and are out of the market at every rise however small it may be.

Long interests are, however, very well inclined to hold jute at these prices. Not only the speculative element is bullish, but interest earning class also, along with the usual stockists of jute, in local as well as moffussil market, are bull in their ideas. Such interests have made very decent purchases for ready as well as forward positions, both in loose jute and pucca bales. At the moment they are absorbing a considerable portion of the heavy seasonal arrivals. But, apart from the sentiment that jute prices are very low, and holders in the long run stand to gain, there is no outside support to the market. Thus at the moment the future trend of the market is very uncertain. The long interests at the moment will carry for some time, but, in case outside support is not forthcoming according to their expectation, the technical position of the market is such that the long interest instead of supporting the market may depress it further down whenever the same is liquidated. Short operators, however, can operate both ways, by selling at every rise and buying at every decline, since the market is very likely to rule narrow for some time to come.

JUTE MANUFACTURES

Since reporting last, the jute goods market in Calcutta has ruled quiet and easier with a decline in prices, both in hessians as well as Heavy goods. The demand from the consuming centres has been poor and the immediate outlook far from satisfactory.

The "no" to further inflation in U. S. A., the bear cotton report published this week in Washington, the apparent failure of Disarmament Conference at Geneva, the deadlock in Anglo-Japanese talk in Simla, and local troubles in Bombay market and banks, had all a very depressing effect on the markets in general. It is due to the paucity of ready stocks in hessians that the decline in values have been of a small nature, otherwise the prevailing conditions would have caused a very sharp decline. That danger is still not over and in case the outlook in the near future does not become more cheerful one should not be surprised if a further drop in prices takes place in the near future. The technical position is partially bullish due to short bears, but the prevailing rates are more in favour of bears than bulls, consequently unless the bulls get a support by a rise in values they will be more prone for liquidation, should a further decline in values take place. The trend of the market is therefore very uncertain.

The stocks of hessian show a decrease by 7 millions yards in Calcutta and a million yards in U. S. A., on Oct. 1, as compared with the stocks in Sept. 1. But the reduced consumption of hessians during September by 12 million yards as compared with that during the month August had a very depressing effect in the market with the result that there has been a decline in values by about four annas in the course of this week.

The following are the stock and consumption figures of hessians in U. S. A. :—

	Stocks at end of month. Spot.	Afloat.	Consumption for month.
January ...	157	74	37
February ...	147	78	32

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, October 12.

New York rates have come down about a quarter cent., January closing at 9.49 yesterday. To-day, markets in America are closed. The holding movement is gathering strength amongst Southern farmers due to Government loan scheme but the Bureau report was bearish and production was estimated which shows an increase of 471,000 bales over the preceding estimate due almost to ideal weather conditions. The yield per acre is stated to be 205.3 which is a record figure. Speculators remain apathetic watching the prospects of war debt negotiations and awaiting the Administration's currency programme. Locally, Broach rate touched the lowest at Rs. 185-8 yesterday owing to unsettled financial conditions in the City, continued delay in negotiations with Japanese and prospects of bumper Indian crop notwithstanding the damage done by excessive rains. Broach rate closed to-day at Rs. 188-4.

The market during the period under review has ruled very quiet and a considerable drop in values is recorded during the past two weeks. April May Broach has touched to Rs. 186 a low level not touched for about a year.

The decline in values has been due to the bearish American Cotton production report, estimating a total production of 12.88 million bales, a figure slightly over than the original estimate. The weather has been exceptionally good and according to the report the yield of lint per acre is estimated at 205 lbs. per acre against 173 lbs. per acre in 1932.

The estimated production of cotton in U. S. A. for the past six years was:

		In million bales of 500 bales.	Lint per acre.
1933	... ...	12.88	205.3
1932	... ...	12.99	173.3
1931	... ...	17.09	201.2
1930	... ...	13.93	147.7
1929	... ...	14.82	155.0
1928	... ...	14.47	152.9
Average for 1928-32	...	14.66	166.0

The continued boycott by Japan of Indian cotton, and the absence of long interest due to serious troubles in Currimbhoy group, and rumours about other cotton mills in Bombay have further accentuated the weakness of

Indian cotton. Hedge sales are increasing every day and weather reports are quite favourable. The goods market is also not so satisfactory. All these combined reasons had a very depressing effect in the market. The values are however very low consequently short purchases at dips are not undesirable.

Weather conditions in U. P. and the Punjab are satisfactory. The rains in Oomra districts being heavy, the movement of the crop is expected to be late by about two weeks.

The consumption of Indian cotton in India during August amounted to 194,506 bales as compared with 210,714 bales during the same month last year. The total consumption for the season ended 31st August was 2,360,064 bales as compared with 2,346,396 bales in the previous season. Imports of all foreign cottons into Bombay during 1932-33 were 249,452 bales as compared with 537,953 bales in the previous season. Statistics regarding the consumption of foreign cottons in India are not yet available. But it can be safely presumed that owing to decrease imports the consumption of such foreign cottons ought to have proportionately decreased.

PIECEGOODS

Very quiet conditions have prevailed in the piece-goods markets during the period under review, while the business due to Pooja holidays was of a very poor nature. Even the lucky day sales were poor and least encouraging.

The drop in the price of cotton had had an adverse effect. Buyers have become more cautious and the purchases have been made only for immediate requirements.

Fair business has been done in Lancashire goods, while no business of importance is done in Japanese goods.

In Lancashire goods fresh contracts have been placed in umbrella cloths, dhooties, light whites, printed sarries and dyed voiles. There has been rather more business doing in fancies of late and it has been suggested that this is the outcome of the higher tariff against Japanese cloths, which is diverting attention to Lancashire products. Indigenous manufactures continue to command most attention and although no bulk sales have been effected, quite a number of small orders have been successfully negotiated in such lines as grey drills, khaki drills, grey khadi, white shirtings, white mulls, striped shirtings and dyed cotton coating cloths.

According to latest advices from Bombay and Ahmedabad, moderate clearances of mill stocks have been made at reduced prices but, even so, there is lot of room left for improvement. No new development has taken place in regard to forward business in Japanese cotton textiles, though importers have been doing a regular trade in spot goods, grey shirtings, grey dhooties and fancy lines constituting the bulk of the turnover.

As to the ready position, the market has developed a decidedly better tendency especially in regard to seasonal styles and values for these sorts have gradually appreciated. Upcountry demand has been fully maintained and dealers report an improvement in local consumption, which has made a favourable impression on bazaar stocks.

Trading in the yarn section during the period reviewed has been very indifferent, buyers displaying little or no interest in replacements.

BULLION

GOLD.

(By Wire)

(From our correspondent).

Bombay, October 12.

During the week, as movements on London exchange were narrower, gold prices ranged within Rs. 33 and Rs. 33-3-6. To-day's rates at 5-30 p.m. stood at Rs. 33-0-6 for ready and Rs. 33-1-3 November and Rs. 33-1-6 for December. Ready sovereigns were quoted at Rs. 20-14.

Gold.—During the period under review the gold market has ruled very steady and business was done as high as Rs. 33-4 per tola, the tendency towards the close being slightly easy. Stocks in Bombay market are estimated at about 3 lakhs tolas while the demand for internal use being very poor at 213 thousand tolas. In view of the declining tendency of the sterling the market appears to remain steady.

LONDON (Air-Mail Week.)

During the week, fluctuations in prices were somewhat wide. The tone of the market was, however, fairly steady. Continent sold in moderate amounts. Indian bazars and China re-sold in fair amounts. Though China also bought, America was the principal buyer in spite of the restrictive influence of the uncertainties of the dollar exchange.

No indications of a wide variation from the present level are seen.

The following were the United Kingdom Imports and and Exports of silver registered from mid-day on the 18th instant to mid-day on the 25th instant:—

Imports.

	£
Soviet Union (Russia)	13,500

TEA

Sale No. 17 was held on 9th and 10th October, when 25,500 packages of tea with export rights, 12,800 packages of leaf and 7,800 packages of dust for internal consumption were sold at annas -/9/2, -/4/5 and -/4/7 per lb. respectively.

Arrivals for these sales were very heavy the total sales nearing about 50 thousands packages.

The selection was better and Assams showed a little more brightness in cup. The auction passed with a brisk tone and prices marked a further advances of 3 to 6 pies.

Fannings again met very keen support and were often 9 pies dearer, while common and low medium brokens met ready buyers at ½ anna advance. Leaf teas showed some irregularity and whereas common kinds sometimes only realized last rates, tippy sorts were in more demand and ½ to 1 anna dearer.

The following are the full particulars of sale No. 17.

Teas with Export Rights

	1933.	1932.	1931.

INDIAN TEA SALES.

At the London auctions on October 9, 27,900 packages of Indian tea were submitted for sale.

There was a fair demand. Common qualities were firm while other sorts, particularly medium kinds, were irregular chiefly due to qualities.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10¾d. to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10⅝d., to-day's auction 10½d. lb.; Common Orange Pekoe last auction 10¾d., to-day's auction 10½d. lb.; Common Broken Orange Pekoe last auction 11½d., to-day's auction 10⅝d. lb.; Common Broken Pekoe Souchong last auction 10⅝d., to-day's auction 10½d.

The following are the value prices:—

Clean Common Pekoe last auction 10⅝., to-day's auction 10⅞d. lb.; Clean Common Broken Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Orange Pekoe last auction 11½d., to-day's auction 11⅜d., lb.; Clean Common Broken Pekoe Souchong last auction 11d., to-day's auction 11d. lb.

CEYLON TEA SALES

At the London auction on 10th Oct. 23,400 packages of Ceylon tea were submitted for sale.

There was a fair and rather quieter demand except for better medium qualities which were somewhat irregular.

The following were the lowest prices fetched during the day's auction:—

	Last auction	To-day's auction
Common Pekoe	10¾d.	11¼d.
Common Broken Pekoe ...	11¼d.	11⅜d.
Common Orange Pekoe ...	12½d.	12⅝d.
Common B. O. Pekoe ...	12d.	12½d.

The following are the value prices :—

Clean Common Pekoe ...	11½d.	11½d.
Clean C. B. Pekoe ...	11⅞d.	11⅞d.
Clean C. O. Pekoe ...	13½d.	13½d.
Clean C. B. O. Pekoe ...	12½d.	12½d.

Tea Exports

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chitagong are issued by the Indian Tea Association :—

Quantity of tea entered for export to United Kingdom for the second half of September, 1933.

Calcutta—Black 9,898,104 lbs.; Green nil.
Chittagong—Black 9,235,756 lbs.; Green nil.

Quantity entered during the corresponding period last year :—

Calcutta—Black 16,105,632 lbs.; Green nil.
Chittagong—Black 6,928,973 lbs.; Green nil.
Total from April 1, 1933 to September 30, 1933 :—
Calcutta—Black 9,898,104 lbs.; Green nil.
Chittagong—Black 36,151,909 lbs.; Green nil.
Total 109,868,851 lbs.

Total from April 1, 1932 to September 30, 1931—134,624,432 lbs.

Exports from Northern India from 1st April 1933, to 10th October, 1933.

	Season 1933-34	Season 1932-33	Season 1931-22

GRAINS AND SEEDS

WHEAT.

Due to various reasons the wheat market has ruled very quiet there being a considerable drop in values, ready as well as forward. May Beta has dropped down to Rs. 2-15.

The fall has been due to exceptionally good crop reports from wheat growing tracts in India and also due to further decline in the values of rice and maize.

CANADA

Stocks of Canadian wheat in Canada at the end of the crop year July 31, 1933, totalled 211,740,188 bushels, while there were also stored 42,044,758 bushels of oats, 11,338,322 bushels of barley, 5,814,727 bushels of rye and 1,179,575 bushels of flaxseed.

The official carry-over of wheat at the end of the crop year, namely 211,740,188 bushels, is 79,895,382 bushels more than last year's total of 131,844,806 bushels. Canadian wheat in elevators and afloat in the United States amounted to 6,220,210 bushels, while 1,468,000 bushels of Canadian wheat were afloat destined for United States ports. The comparable figures for these items at July 31, 1932, were 4,706,828 and 1,181,427 bushels respectively.

The total amount of Canadian wheat on Canada and the United States on July 31, 1933, was 219,428,398 bushels, compared with 137,733,061 bushels, the revised total for July 31, 1932.

DISPOSITION OF WHEAT

The following table is issued by the Bureau relative to the disposition of Canadian wheat during the crop year, August 1, 1932, to July 31, 1933 :—

	Bushels
Exports	264,304,327
Human consumption	41,500,000
Seed for 1933 crop	32,277,000
Feed for livestock and poultry ...	36,542,000
Loss in cleaning	7,200,000
Unmerchantable	2,108,000
Carry-over, July 31, 1933 ...	211,740,188
	595,671,515

RUSSIA

The Russian grain bogey has now materialised. Broomhall quotes a report that the wheat crop may even exceed that in the bumper year of 1913. Certainly, heavy sales of Russian wheat in the past weeks have been directly responsible for the sudden removal of pegged prices in Winnipeg. For the peg had maintained Canadian prices above their natural level and made possible Russian undercutting. This was too much for Mr. Bennett. The removal of the peg and the slump in Winnipeg prices also affected Chicago and caused it to falter in its upward stride.

The U. S. Government has announced its definite intention of financing the export of from 30,000,000 to 35,000,000 bushels of wheat to the Orient from stocks at present held on the Pacific coast. Crop estimates in the United States show a slight increase this month, but are still well below last year. A similar increase has been made in the Canadian estimates, but the crop is likely to be the lowest since 1924. The present estimate is 282,771,000 bushels, compared with 428,514,000 bushels last year. In the Argentine, the recent rains have just managed to avert complete disaster, but they have come far too late to repair the havoc caused by the long drought.

WHEAT PACT

Agreement has been reached, it is understood, by the representatives on the International Wheat Advisory Committee, of the four Danubian States, Hungary, Roumania, Yugoslavia, and Bulgaria, as to the relative proportions of wheat exportation which they are to have in the figure allotted to their group. The Committee again met at the Foreign Office yesterday, Mr. R. W. Bingham, U.S. Ambassador, presiding.

The claim of the Soviet Government that the allocation to Russia is too small is expected to be the subject of a meeting later, between representatives of the Soviet and of the four principal exporting countries, the United States, Canada, Australia, and the Argentine.

At the end of the meeting an official statement was issued saying that the Committee discussed its functions in relation to the Wheat Agreement and laid down certain lines of activity for its secretary. Statements were made by the representatives of various importing countries, including France and Germany, as to the way in which the Governments were modifying their agricultural policy along lines which might be expected to result in an improvement in the international outlook for wheat prices.

FRANCE REDUCING EXPORTS

M. Devenat, the representative of France, explained that, although two successive bumper crops had resulted in a considerable exportable surplus, the French Government, by arrangements to increase the use of wheat for animal feeding, and by decreasing the quantity of flour extracted from wheat, would be able to reduce exports to a minimum figure, which should have no appreciable effect upon world prices.

Dr. During, representative of Germany, summarised the German agricultural policy respecting cereals. The Government, he said, was adopting a policy to reduce the area sown with wheat and rye. Recent exports of wheat from Germany would be offset by imports.

The Committee adjourned until November 27.

GERMANY'S NEW GRAIN POLICY

The Minister of Agriculture, Dr. Darre, who has assumed the dictatorship over the Reich grain policy, has forbidden all speculative future dealings in grain by establishing fixed prices for wheat and rye only for the present, and by announcing a restriction of production.

The prices for wheat in the Province of Brandenberg are fixed at 182 marks per ton in October, rising gradually to 195 marks in June, 1934, while the rye prices range from 147 to 165 marks. The Minister also warned the farmers against producing more grain in the autumn of this year than in the fall of last year.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

RAILWAY AGENTS IN CONFERENCE.

The annual session of the Indian Railway Conference Association was held this mid-week in Simla, Mr. H. A. M. Hannay, Agent, East Indian Railway, presiding. At the very outset, it may be asked what exactly the purpose or objective of this Conference is and whether such purpose has been carried out during all the many years in which the Conference has been meeting annually. In fact, this was the issue posed by Mr. V. E. D. Jarrad, Agent of the Bengal Nagpur Railway, in the course of his Presidential address last year. The purpose for which the Association was started was that it might serve as a committee comprising of the most competent officers available from Indian railways to be utilised as a consultative committee by the Railway Board and the Government of India on any subject connected with the working of the railways. It was the frank admission of Mr. Jarrad that the Conference had not been, in the past, utilised to serve the purpose for which it was formed. The main reason for the failure was that the organisation of the Conference had not been planned in a manner that would lead to the fulfilment of this purpose. Assuming the objective to be such and the organisation to be defective from this point of view, Mr. Jarrad proceeded to make a detailed proposal with a view to ensure the carrying out of the original objective ; the main features of his proposals were as follows :

> (*a*) A President and Council of the Indian Railway Conference Association, who can keep the Railway Board in close touch with the combined views of the Railways.
>
> (*b*) Two meetings each year—one in Delhi and one at Simla, which can keep the Railways, collectively and individually, in close touch with the views and policy of the Railway Board.
>
> (*c*) A Vice-President, with Technical Committees, which will permit Railway Groups to obtain the advantages, and avoid the disadvantages of amalgamation by co-operation.
>
> (*d*) A President, with Vice-President, and the necessary Committees, which will permit a combined effort made by Railways as a whole, to become economical and more efficient, and therefore of more value to the country.

Commenting on these suggestions in our issue of October 15, 1932, we said that while his exposition of the proposal might make it appear elaborate and complicated, a careful appreciation of its salient features should result in recognition of its simplicity of plan and simplicity of proceedure. We added :

> "Plans may be simple or elaborate ; schemes with intimate details could be worked out ; but the success or failure of any plan or scheme depends, in the ultimate resort, on the human factor. In other words, if the proposal of Mr. Jarrad is to bear fruit, the President of the Indian Railway Conference Association should not be content to be a mere figure-head ; likewise, the proposed Vice-Presidents must also be prepared for additional work. Once this is realised, there cannot be any difference of opinion that the adoption of Mr. Jarrad's plan is calculated to extend and enhance the usefulness of the Association ; and, at the same time, to act as a pleasant reminder that the original object of the Association has again been brought to the forefront and is being kept steadily in view by those entrusted with the affairs of the Association."

We now understand, from this year's President of the Conference, that the improvements in proceedure suggested by Mr. Jarrad were given careful consideration by the railway administrations. Of the need for the creation of some machinery by means of which the considered and authoritative opinion of the Association would be speedily available to the Railway Board, there is perfect unanimity of opinion. The railway administrations have not, however, come to any agreed formula as regards the methods. We now know what is the objective of the Conference. No one disputes the correctness of such an objective. The present organisation of the Railway Conference is not calculated to fulfil this objective. Everyone is agreed on this also. But the railway administrations, while agreeing on the objective and agreeing on the unsatisfactory way in which the objective is being carried out, cannot decide whether the proposal suggested by Mr. Jarrad is the best solution of the problem. Owing to this disagreement, the proposal was placed on the Agenda of this year's Conference ; we are not, at the moment, in a position to say how exactly the members assembled in Simla have disposed of this matter. For this failure to decide finally and speedily on the procedure to be adopted, Mr. Hannay offers the consolation that, on his study of the proceedings of the Conference for the last fifteen years, he was struck most by the fact that many of the problems of sometime back were discussed year after year and gave rise to much controversy and many doubts ; and that, ultimately, they were satisfactorily solved. If any suggestion or proposal evokes controversy and gives rise to doubts, it only shows that the people concerned are giving the matter a most careful consideration. So far so good. But we should urge that the issue raised by Mr. Jarrad is of such compelling importance as affecting the very utility of the Railway Conference, that it is up to the railway administrations to find some manner of satisfactory solution with as little delay as possible.

* * *

This year's President of the Conference resolutely avoided the temptation of posing fundamental questions or tackling hypothetical problems which the railways might find themselves faced with in the future. The task which Mr. Hannay set to himself was much simpler than all this, more useful and of more direct and practical importance. When the railways are passing through one of the most difficult periods in their history ; when the hard and unpleasant fact is, as pointed out in the brochure issued by Mr. M. W. Brayshay, Acting Chief Commissioner of Railways and Mr. P. R. Rau, Financial Commissioner of Railways, on the results of the working of Indian railways for 1932-33, is a substantial deficit of Rs. 10 crores which had to be borrowed from the accumulated balances of the Depreciation Fund ; and when, all the time, the railway authorities are being appealed to and warned, coaxed and threatened, to reduce expenditure here and cut down staff there; no Agent of an important railway administration like the East Indian Railway could have the enthusiasm or inspiration to make an address on topics beyond those that keep tormenting and harassing him each day of the tedious year. It is, therefore, a matter-of-fact speech which Mr. Hannay has delivered ; and we congratulate him on having chosen a less ambitious plan. For, as Sir Joseph Bhore, Member for Commerce and Railways, has shrewdly remarked, it would be the height of unwisdom to attempt to forecast or prophesy in matters which have seemed of late to elude the working of natural laws ; and, by the same token, it were hazardous to plan for the future on any stupendous scale when so much uncertainty hangs round the morrow's happenings. The evil of each day is sufficient burden and responsibility. Why purchase the troubles of the morrow? From this point of view, the three topics which Mr. Hannay has chosen as proper and useful themes to dilate upon are : (1) road-rail competition ; (2) travelling with-

out tickets ; and (3) appropriateness of an extended capital programme.

* * *

This question of passengers travelling without tickets must be considered as one of the unsolved problems of the Railway Conference. As Mr. Hannay says, eleven years ago, the Conference passed a resolution asking for a revision of the Railway Act to provide better security for railways in recovering fares and penalties for travelling without tickets. On the one hand, masses of statistics have been collected, which go to prove that the action suggested by the Conference eleven years ago is the only way of dealing with this problem. On the other hand, the railway administrations have not been idle on their part ; they have taken all possible precautions and put into effect stringent measures. But the conclusion they have arrived at is that, so long as the Railway Act does not provide the necessary deterrent effect, checking of this evil is well nigh an impossible task. It is difficult to make any definite statement as to the exact loss which the railways have suffered on account of this factor. But there can be no doubt that the loss is considerable, so considerable, indeed, that once the Railway Act is revised and the hands of the administration strengthened in this matter, Mr. Hannay hopes that it would be much easier to meet the demands for reduced fares. Meantime, so long as the present position continues, "the honest passenger pays for the dishonest ones."

* * *

The elimination of wasteful competition between rail and road transport comes in for exhaustive treatment at the hands of the President. The problem in this behalf was posed, succinctly and compactly, by Mr. P. R. Rau in the course of an article he contributed to the *Indian Finance Year-Book* of 1932 in the following terms :

> "The Indian State Railway system, in which has been sunk a capital of nearly Rs. 800 crores, is almost entirely the property of the Indian taxpayer ; and every taxpayer is individually interested in seeing it perform its function of providing cheap and efficient transport without incurring a loss and being a burden to him. It seems, however, that this elementary proposition is yet insufficiently realised, for it is found that some Provincial Governments still too often employ their available resources, supplemented by their share of the grants from the Road Fund, in merely improving existing main lines of communication and assisting road motor traffic to compete with railways rather than in constructing new roads which will open new country and assist in moving agricultural produce and other commodities as required."

The subsequent conferences and discussions and investigations that have taken place have been mainly in the directions indicated by Mr. Rau. Mr. Hannay proves completely that, if timely steps are not taken to bring about a proper co-ordination of the transport system, it is the taxpayer that will have to foot the bill. At the Rail-Road Conference, Sir Guthrie Russell explained that the annual obligations of the Railways amount to about Rs. 103 crores on account of payment of working expenses, interest charges on state capital, guaranteed interest on the capital contributed by the companies, depreciation charges and contribution to the general revenues of the Central Government at one per cent. on the capital at charge. During the last two years, the contribution to the Central Revenue has not been possible. Even for the meeting of the other charges, the sums in the Reserve Fund had to be drained ; and when no more was available from this quarter, the accumulations in the Depreciation Fund had to be raided. Mr. Hannay's conclusion merits careful attention :

> "It is obvious that the more the earnings of the State-owned railways are depleted, the less revenue the Central Government will be able to share out to the Provincial Governments, which will have to make good the deficits from the taxpayer. I am far from advocating the repressive measures against motor competition which some Governments owning State Railways have taken, but it is clear that the public cannot afford to look on unconcerned and take the best that immediately offers to them from both forms of transport unless they are properly regulated and co-ordinated."

Mr. Hannay has dealt only briefly with the possibility of larger outlay on capital works. Mr. Jarrad urged a strong plea that the fullest advantage should be taken of the cheap borrowing rate of the Government and the cheapness of all commodities for undertaking those capital projects which will be required to meet increased traffic as and when trade improves. Mr. Hannay says that "after another year of curtailed expenditure this is even more justifiable now than then." He is not for undertaking new construction or opening new tracts. He advocates improvements and replacements on the open lines, the object being to enable railways to deal efficiently and expeditiously with all the traffic offering when trade revives. Especially urgent is the replacement of a number of wagons which, though they have not yet reached the stage of condemnation, are uneconomical to maintain. We discussed the question of wagons in detail in the course of our review of last year's Conference ; and we believe that our remarks are of even greater relevance on the present occasion :

> "Owing to dull trading conditions and lethargic movement of produce, the number of wagons in requisition for trade purposes has been on the small side for the past two years ; and it has, therefore, been possible, on the one hand, to carry on with such serviceable wagons as the railways had on hand and, on the other, to lay aside the large number of wagons, which are not up to the requirements of modern traffic conditions and the majority of which, but for the financial situation, would have been replaced before now. Mr. Jarrad points out that these wagons are uneconomical in operation and cost an excessive amount to repair. For the time being, these are stabled in sick lines unrequired. Should there be a revival of trade, would it be possible to cope with the increased demand on the basis of the present number of serviceable wagons? If additional wagons were required, would those, now on the sick list, be useful and would it be worth while to undertake the necessary repairs and incur the extra expenditure? The President of the Conference takes the view that these wagons must be condemned as useless ; that orders for new wagons should be placed from now ; and that, in any case, purchase of new bodies and underframes should be made so as to enable the completion of serviceable wagons by the utilisation of the large number of good wheels, axles, buffers, brake gear and other fittings on the older wagons. From all points of view, Mr. Jarrad considers that it is far more economical to scrap a good part of the old wagons and construct new wagons for which new bodies and underframes should be ordered. To repair the old wagons would be a makeshift which is likely to prove costly in the long run. Nor can there be any doubt that with the record low prices ruling in the market for all kinds of commodities at the present moment, any plan of purchase now undertaken should prove extremely satisfactory. We may also readily concede that the provision of new wagons would help, and, in some cases, save, those industries which so largely depend on the railways as customers and are now in an exceedingly difficult condition."

We understand from Mr. Brayshay's speech at this year's conference that the capital programme for 1934-35 contemplates an additional expenditure of Rs. 2½ crores. We hope that the above remarks as regards wagons will be borne in mind in the formulation of the programme.

THE SHAPE OF THINGS TO COME

During the last two years mankind has lived with a new sense of the dangers that threaten civilisation from all sides. Not a day has passed without the newspapers administering a rude shock to the finer sensibilities of the human race. The last war tormented men's minds, less by its memories than by the nightmare of its more disastrous repetition in the future. The first decade after the War was, apparently, a period of reconstruction. Europe fairly settled to the collar of Versailles. The currencies were reclaimed from chaos, a measure

of balance restored to better budgets, productive machinery reconstructed and re-equipped, and international trade put back on the rails. There was a growing recognition of the follies of the War and the iniquity of the settlement which followed. Though thinking men saw clearly that the opportunity to establish peace, such as it was, was shamefully wasted, they were prepared to pin their hopes to the League of Nations and such other forum as mankind seemed to have in common.

* * *

All this was regarded as the first ray of hope. But instead of expanding into broad daylight, it shrank, dimmed and was before long lost to sight. Clouds filled the skies as if to offer battle to humanity on all fronts. And the murkiest patch was on the economic horizon. The Depression which started at the end of 1929, developed like galloping consumption and has nearly choked economic society to death. The World Economic Conference demonstrated the inability of the nations to come together even in the face of a common catastrophe. Its break-up has been the death-knell of the hope that there could be any return to prosperity on the old familiar lines.

* * *

The deepening of the economic gloom has been co-eval with the rise of new threats of belligerence. The activities of Japan in the far East and the thin disguise, under which the Powers connived at this recrudescence of belligerence, had already done much to dispel the hopes and illusions of ingenuous pacificism. Europe has relapsed to its game of tossing and restoring the "balance of power." Germany exasperates world opinion with the aimless vindictiveness of the Nazis. The Disarmament Conference has nearly broken under the strain of the technical complexity of its problems and the revival of the diplomatic continuation of pre-War times. Sir B. L. Mitter declared only the other day that he saw an ebb in the enthusiasm for peace. Mr. Baldwin has begun to talk of a new war as an imminent danger.

* * *

Thus the conviction that the nations are incapable of coming to that common agreement, which alone can make the revival of prosperity possible, has coincided with a forgetfulness of the horrors of the war.

* * *

It is clear that there is to be acute tension in international relations both in the economic and the political sphere. Within each country, the chaos of opinion, parties and programmes is even more than the chaos in international affairs. The foundations of every party have been subject to erosion or subsidence. Recent experience and the findings of science have broken down their dogmatism. The capitalist is no more sure of the self-adjusting qualities of individualism than the socialist is of the practicability of a society based on service. The free trader has begun to recognise that the economic fortunes of a nation can no longer be committed to the inscrutable care of a few *a priori* principles. The advocate of economic valuation sees that it is no more a straight or smooth road to prosperity than free trade.

* * *

It is unfortunate that precisely during these days of innumerable parties and indecisive opinions the rules of the political game, as they have been understood and observed in the past have come to be wellnigh abandoned. Democracy has come in for more than its share of the prevalent scepticism. And without rarely any attempt to examine its basis or understand its essence, there is an open preference for Dictatorship. The easiest way of a Dictator enlisting the necessary popular support is to play upon the prejudices of the multitude and fan their latent hatreds into a flame.

The position to-day is such that mankind cannot rest on it for long. Either the world sinks into an abyss of crime and anguish or pulls up itself vigorously to heights of prosperity yet undreamt of.

* * *

The answer has been attempted by the one person in the world, who is competent to attempt it, Mr. H. G. Wells, in his latest work, "The Shape of Things to Come." The mental training and equipmet of Mr. Wells, which fits him, rather, inevitably, urges him, to this task may be examined, though they are well-known. Mr. Wells has been a socialist, not in the parochial sense in which every clamourer for increased wages is, but in the sense that his outlook embraces the whole of human society without bias for any one section thereof. And from quite early in his life he realised the futility of pious hopes of a Utopia and endeavoured to acquire all the knowledge that has a bearing on human welfare. Though he was regarded as a man of letters, he is essentially a man of science. Biology, Psychology, Psychoanalysis, Eugenics, Anthropology, Physics, Chemistry had as much interest for him as History, Economics or Politics. He laboured hard to introduce into the latter the same objectivity as has obtained in former. He saw clearly the poison that current books of history inject into our mental systems ; and realising as he did that the dissemination of true knowledge is the essential preliminary to any social progress, he wrote his outline of History which is truly a history of the world, not even of man, much less of any particular race or country. He followed this up with *The Science of Life,* an ordered synthesis of the conclusions of biology. Then came *The Work, Wealth and Happiness of Mankind,* a rational economic treatise, which Mr. Laski appropriately called the "ground plan of the civilisation we are, an attractive blue print of the civilisation we might make, if we cared deeply enough, from the materials at our command."

* * *

The Shape of Things to Come naturally follows from the three stupendous works referred to above. Each of them suggests a big poser. While history has many an achievement to the credit of man, it also shows certain well nigh indelible traits which forebode nothing but evil. Science has released forces which might just as well be harnessed to the service of man as let loose to work his utter destruction. The riddles of economic, thanks to the depression, are an every day experience.

What really is going to be the fate of this World ?

The mind that has exercised itself so much on an understanding of the past strains to peer into the future. And the form which it has chosen for its revelations, is that of a history of the world during 1931-2106, made up from the notes of one Philip Ravan, a clairvoyant whose powers of peeping into the future has been sharpened by his contact with the League of Nations. The form and manner are that of any historical work that we know, but without the bias in favour of one nation or other, with similar references to original sources, records and documents of various kinds, chronicles, correspondence, public and private collections in museums and last but not least, surmises where conclusive evidence, as the author pretends, is not available. If Mr. Wells had only affected the Basic English, which according to him will be the *lingua franca* of the date of his publication, this fascinating pretence would have been complete.

* * *

Into the revelations of this weird clairvoyant, let no one peep, who is craven-hearted. For thought there is a world of joy, literally a world of bliss awaiting him at the end, the purgatory that intervenes is insufferable. Particularly those, who expect to be in the current, but in this context, wholly incorrect phrase, blessed with a long life, must be prepared for thick clouds in the evening of their lives,

clouds not of smoke, light and air as Kalidasa said, but of poisonous vapour, internal gas, fatal bacilli of every kind, dealing death to everyone who breathes them.

* * *

Mr. Wells, or rather Philip Raven sees the utter breakdown of all civilisation within less than half a century. What seem to be bright spots in the international landscape are soon enveloped in the widespread gloom. The World Economic Conference, to the resumption of which many still pin their hopes, becomes "by imperceptible transitions the World Economic Conflict" and the League of Nations "a diplomatic bargain mart". Italian Fascism, which has enlisted admirers anxious to pay the tribute of imitation, is in the eyes of the historian of the distant future but a "bad good nothing". Bolshevism in spite of the "modernity" of its many aspects, shares the general ruin owing to its hide-bound doctrines and its unscientific way of treating its opposition. Both were equally incapable of funding the World State, the one sovereign remedy for all the ills of Man, for "there was a heavy load of democratic and equalitarian cant upon the back of the Russian system, just as there was a burthen of patriotic and religious cant upon the Italian Fascist." Mr. Roosevelt's attempts at recovery, though no doubt, bold and well intentioned was a clutch at a straw in the turbid waters in which mankind was to be drowned before long.

* * *

The manner in which Mr. Wells leads up to the utter breakdown of civilisation is so perfect that it does not strain the credulity of any one except those who recoil from the truth of the terrible. Grant the breakdown of another or more World Economic Conferences, the loss of prestige of an already impotent League of Nations, the muddled economic policies, of the nations, the shrinkage of international trade and the deepening of the economic gloom, with one or two murderous wars thrown in, waged with all the relentless completeness with scientific invention and stolid militarism make possible, it is not difficult to imagine a world drenched and deluged in misery, till the last landmarks of civilisation are completely submerged in the foaming waters.

* * *

No review can do justice to Mr. Wells' story of Fall of Man, cogent, sweeping, and yet invested with an amplitude of detail, terrible, but plausible beyond question. Japan, which has already snapped its fingers at the League of Nations, not without the connivance of the Powers, resumes hostilities against China by 1936. The Polish Corridor and the Free City of Danzig light the magazine a little later in Europe. Both wars are fought with the latest methods invented by science. Raids of gases and germs, instead of the trenches and tanks of the last war, disseminate the civil population of both countries.

* * *

The disintegration of society all over the world is even worse than the horrors of the war. "As the economic breakdown proceeded through the thirties and forties of the twentieth century, social security diminished even more rapidly". When a "world of motor cars, telephone, plate glass shop windows, unbarred country houses, trustful social habits suddenly falls a prey to unprecedented economic dislocation," the accumulating number of intelligent, restless, unemployed readily avail themselves of the opportunities for loot and a life of reckless bravado. The outlook and habits of people change to the new environment. The sense of trust and security is gone, and there is no part of the world which is not infested with brigands employing all the inventions of science in their anti-social activities. So complete is the break up of civilisation that men meet each other like ship-wrecked stragglers on a desert island with an overpowering sense of pursuit by a malignant fate.

* * *

In this deluge the aeroplane was Noah's Ark. The warmongers failed to complete their work of destruction mostly owing to the pacifist sabotage. After all the man of science is a member of the world state; and as the preparation of the gases is in his hands, he is often prone to make them a little less deadly than he could have. The scientific inventions, such as could be of lasting benefit to humanity, could not be obliterated. Aviators flew with ease round the world; and while all was devastation on the land, they gained a sense of mastery over the world. Land transport, and to some extent sea transport, was moribund if not wholly dead. Aviation took on its shoulders the burden of even ordinary commercial transport. Exchanges were effected; and even a new medium came into use under their aegis. It is true that robbers infested the air also; but most aviators came from a class of youthful idealists; their touch with what are now distant parts

of the world, their part in such trade as take place in their times, with a lively sense of the horrors that overtook mankind, they decide to strengthen their control and unify the world on the only basis in which it can be, the World State.

* * *

The Air and Sea control is thus the nucleus of Mr. Wells' millenium. It consists of a number of young men who combine enthusiasm for their ideals with a rigorous practical sense. They see that socialist cosmopolitanism is the one thing that can enable the world to return to and sustain prosperity. But they realise that before man can be made to subserve such cosmopolitanism, he has to be trained. They are keenly alive to the follies of Russian Bolshevism which, failed in its technical tasks and treated the resultant opposition with indiscriminate and sterile harshness. The lessons of past experience, namely, that in order to found the world state the education and ideology of the average man must be changed is not lost upon them. The Air and Sea Control provides for the expansion of its own intelligent membership. It takes in hand the education of the young, a process which draws freely from all the conclusions of science. A revolution in the very character of revolutions is accomplished.

* * *

Not that the course of the World State was too smooth. It has its share of the opposition that falls to the lot of all pioneers in the cause of the Good. But the devastation of the world has this soul of good, that there is no authority left in the world sufficiently strong and assertive to challenge the sway of the Air and Sea control. The great Imperialist systems are broken asunder; and the petty sovereignties that remain could hardly think of measuring their strength against an organisation that strides the narrow world like a Colossus. Slowly the control asserts its right. It takes quiet and unostentatious possession of the major factors of production. Often it comes to an understanding with the local pretenders who are thereafter easily superseded. And when the time comes they throw off the shackles and enter into the possession of their lawful heritage.

* * *

The chronology of these developments matters little. Suffice it that after the baptism of fire, which most of us might, perhaps, live to see, mankind emerges as a social and sentient community, willing and able to make human civilisation all that it can be.

Let us recover alike from the nightmare and the dream. The date at which this history is written is rather like an Olympus from the heights of which the Gods of the future look down on our present struggles, the struggle of the purblind among the blind. There can be no better antidote to the poisonous vanities of contemporary life than this work of Mr. Wells, dealing as it does with a maturity, in which the best minds so far known are viewed as the minds of childhood or imperfect adolescence. If this book can do a little to tone down racial arrogance and assuage racial antagonisms, infuse a sense of the solidarity of the human race, and the right of every one to achieve our common destiny, it will have done a service which the endless international conferences have only defeated.

* * *

It would not be justice to Mr. Wells' work if some of the shortcomings of his work are not touched on, albeit gently. After all, Mr. Wells' mind is not so much subtle as gigantic in its range and grasp. It synthesises the findings of science. But it does little to eliminate its own idiosyncracies, which are far more than in the case of say, Mr. Bertrand Russel whose intellect is a razor edge. The repeated references to money and exchange in the idyllic days of 2016 makes one wonder what ideas Mr. Wells entertains of money and its place in a cosmopolitan socialism, which harnesses all the forces of nature in the service of man. When coal is forced up by the use of energy imprisoned beneath the earth's crust and millions are being released from toil for the preservation of Mr. Wells' encyclopaedia, we wonder what purpose will be served by a monetary phantom which takes its form from "energy". But this is a mere error, compared to Mr. Wells' emphasis on the incapacity of Karl Marx to make a living as proof of the unsoundness of his doctrines. We think it more than probable that the majority of Mr. Wells' admirers, particularly of this work on a new Utopia, are to be numbered among the comparative failures of life. And the end of the majority of humankind, as Mr. Wells conceives it, is to work in a museum or library which it would require a high speed aeroplane to traverse from one end to the other.

* * *

These defects notwithstanding, the grandeur of Mr. Wells' conception must hold the world in awe and respect. And none but the most imbecile or the most ingenuous would wait with a chronological diary in hand to verify as the years roll on the prophecies of Philip Raven. If *the Shape of Things to Come* means anything, it means strenuous work to make Mr. Wells a false prophet and bring his millennium sooner than he has dated it.

AIR-MAIL RATES

The Associated Chambers of Commerce has put in a strong plea for the reduction in air-mail charges for commercial documents between the United Kingdom and India. In a communication addressed to the Director-General of Posts and Telegraphs, the Chamber urges that such a reduction "would be followed by a large increase in the weight of mails carried and a corresponding increase in the earnings

of the service". We agree. But we also know that our Government will not agree. Their policy is that if they want more revenue, all that they need do is to enhance the rates. Law of Diminishing Returns is beyond their ken. Our Central Budget needs scrutiny from this point of view. What are those tax-heads in regard to which the very steepness of the rate has resulted in shrinkage of revenue? We hope that, in the next budget, our taxation plan will be placed on a more scientific basis. As for our commercial departments, the Railways can never be made to see the commonsense of the popular motto: "Smaller profits and quicker returns". The rating system in India is based on the fallacy of a higher yield from a higher incidence. The Postal Department made even post cards dearer; and they are too keen on prestige to own their mistake. We would advise the Associated Chamber to prepare, for the edification of our tax-framers, a simple treatise on the Law of Diminishing Returns. **En passant**, we may observe that we are ourselves the victims of the high Air-Mail charges. For six issues of the **Financial News** which cost one shilling, we pay twelve shillings in postal stamps. The **Economist** is priced one hilling; but the Air-Mail authorities make six shillings on it. It is al wrong. But when will our authorities realise the error and folly of the present rates?

BRITAIN AND OTTAWA PACT

On a review of India's import trade during the first quarter of the fiscal year, H. M. Senior Trade Commissioner in India strikes a jubilant note. He is, of course, not concerned as to how India is faring as regards her export trade. He is happy so long as Britain is maintaining her ground of achieving gains. In most items, the ground is firmly held; and in a good few, progress has been achieved—declares the Trade Commissioner in high glee. He is interested in examining how the Ottawa Pact is working—what the concrete benefits already reaped by Britain are—and whether her rivals have been routed or are in the way of being routed. On all these questions, he is happy to be able to give answers highly favourable to his country. A few passages extracted from his survey will show how pleased he is with himself and the trade of his country:

> Although total imports were reduced from Rs. 37 crores to Rs. 28 crores and the United Kingdom's share from Rs. 13.08 crores to Rs. 11.32 crores, the percentage of the reduced trade obtained by the United Kingdom rose from 35.2 to 42.
>
> From the first time the advantageous effect of the preferential rates of duty now enjoyed by United Kingdom goods is apparent.
>
> In nearly every item in which there is a preference, the United Kingdom improved her percentage of the trade and in most cases United Kingdom shipments actually increased, although total shipments were reduced.
>
> In many other items arrivals from the United Kingdom were only slightly less, while imports from competing countries showed material reductions.
>
> The figures for the quarter clearly show that the Ottawa preferences, coupled, of course, in some cases with an exchange advantage, are resulting in a gradual displacement of Continental and American goods by the United Kingdom product.
>
> There was an all-round reduction in imports from Germany, most marked in competitive items such as hardware, yellow metal and copper sheets, instruments and apparatus, etc.
>
> In the case of Italy the falling-off was mostly in fancy cotton piecegoods, woollen goods etc.
>
> The falling-off in the case of the United States is remarkable.
>
> Imports of American raw cotton fell from Rs. 2,90 lakhs to Rs. 25 lakhs, kerosene oil from Rs. 14¾ lakhs to Rs. 2½ lakhs, machinery from Rs. 18 lakhs to Rs. 14 lakhs and electrical instruments from Rs. 7 lakhs to Rs. 5 lakhs.

America suffered owing to her currency remaining on par with gold during that period; America's loss in motor cars and tyres was England's gain. In hardware, Belgium and Germany were losers for the same cause; and England was the gainer. In piecegoods, cotton and woollen, Italy lost, and Britain and Japan were able more or less to maintain their position. While other countries had a setback, Britain strengthened her position in the following items:

Goods.	April-June 1933 Rs. (lakhs)	April-June 1932 Rs. (lakhs)
Motor cars	26	10⅓
Pneumatic motor tyre covers	17½	10½
Hardware	25	23
Yellow metal sheets ...	14½	11
Wrought copper ...	11	9
Woollen piecegoods ...	9	6¾
Paints and colours ...	11½	11
Wrought steel tubes ...	7	6
Lubricating oils ...	7	4

The following table giving the imports and the percentages of the total trade in the case of leading competitors proves that barring Japan which has improved her trade from 13.1 per cent. to 15.5 per cent., other countries have far lower percentages in 1933 than in 1932.

Country.	April-June, 1933 Rs. (lakhs).	per cent.
Germany	2,01	7.2
Belgium	69	2.4
Italy	50	1.8
Japan	4,37	15.5
United States	1,60	5.7

United States	4,85	13.0

As it is, Britain's share of India's import trade is over forty per cent. and nearly three times that of Japan.

The moral of all of which is that, from Britain's point of view, the Ottawa Pact has justified itself. May we enquire whether, from India's point of view, the Pact stands equally vindicated. If we remember right, at the time the Ottawa Bill was passed in the Assembly, an assurance was given that the Government will keep themselves in constant touch with trade developments so as to know how the Pact was working. We believe that a kind of committee was also appointed, to which the results of such "watching" are to be communicated. What we would now like to know is whether this work of "watching" and "keeping in touch" is being done; whether any data have been gathered; whether the relevant statistics have been and are being compiled in reference to this particular question; whether the committee was ever summoned to examine such data and figures; and whether the Government propose to issue, from time to time, a survey analogous to that now published by H. M. Senior Trade Commissioner. For our part, we would like to feel equally jubilant that India has gained from the Pact. But we doubt if the facts, when published, will afford us cause for jubilance. Anyway, the Government are under a commitment to enlighten the public. And we call on them to act in terms of that commitment.

(*Continued from page* 929)

"Supposing the rate of discount on Kreditreichsmarks to be 30 per cent. on the day on which you give us instructions to cover the exchange for you, the actual cost of the total Rm. 100,000.00 which you have to remit to your German exporters would be calculated as follows:—

(For the sake of simplicity we take the Rm./£ rate equal 13.40.)

(*a*) ordinary free Rm. 50,000.00 ... £3,731 6 11

(*b*) Kreditreichsmarks 50,000.00 less 30 per cent. discount ... 15,000.00

equals free Rm. 35,000.00 ... £2,611 18 10

Total cost of Rm. 100,000.00 to be remitted to Germany ... £6,343 5 9

(where in the ordinary way the cost of Rm. 100,000.00 at 13.4o—£7,462 13s. 10d.)

The practice of using foreign bonds of German concerns for the payment of German goods has now been regularised. Henceforth foreign importers of German goods may use for the payment of their bills the scrip which is issued for the payment of interest on frozen foreign credits. Some months ago the Reichsbank provided that foreign creditors received half of the interest due on frozen credits on foreign currencies and the balance in scrip. It is this scrip that is now proposed to be mobilised in order to further Germany's export trade. The announcement made by the German Ministry offers the purchase of this scrip through the Gold Discount Bank at the rate of 50 per cent. of its face value but solely for additional export purchases in Germany. Under this scheme the foreign creditor would get for his interest on foreign credits 50 per cent. in foreign currencies plus roughly 50 per cent. of the face value of this scrip, that is a total of about 75 per cent. of the total interest due to him. Considering the unfavourable nature of the currency position of Germany and the natural reluctance of the Reichsbank to allow any normal trade transactions to interfere with its holding of foreign currencies, it may be said that the foreign creditor under this scheme is getting more than he could possibly expect. The foreign scrip holders can sell the scrip through the Gold Discount Bank at the rate of about 50 per cent. of its face value to the foreign importer; and the latter would be able to buy for the full amount of the scrip additional export goods in Germany.

The Foreign Currency Department has naturally been at pains to reassure the foreign countries that the difference between the face value and the price at which it is sold to he importer, which is clearly a gain to the latter, would not be utilised for dumping Germany's goods in foreign countries. This is no mere verbal assurance, in as much as Germany is one of the few countries to evolve a system of rigorous exchange control and this system of control would enable the Government to keep its hold on the position, in order that the sentiment of foreign competitors may not be unduly ruffled.

WHAT LONDON THINKS OF THE RESERVE BANK BILL

REPORTS NOT RUMOURS

Sir HOWARD DENNING AS FIRST GOVERNOR

DENNING STOCK LOW IN CITY CIRCLES

(*By Air-Mail*)

Our London Correspondent writes :

London, September 29.

Those who are in touch with the Head Offices of the Far Eastern Exchange Banks could easily gather that the proposed measure to set up a Reserve Bank in India is viewed with concern and much anxiety.

There is a strong feeling and some bitterness that the interests affected are not being given sufficient time to consider the proposal and submit their considered opinions.

The Air-Mail copies of the Reserve Bank Bill introduced in the Assembly reached the London offices only a few days ago. The opinions of the Indian Branches are yet to come. Till the latter are received, work on the drafting of the memoranda for submission to the Joint Select Committee could not be taken on hand.

A date had been fixed before which such memoranda were to be in India in the hands of the Financial Secretary who is also a member of the Joint Committee. The Financial Secretary has been notified, I understand, that this date must be extended.

Even so, only a hurried study of the relevant documents is possible. The officials here of the Exchange Banks are very sore, indeed, at being swept off their feet in this manner.

The usual practice is for the Exchange Banks to tender views not through their Indian Offices but from London. This practice means fairly detailed consultation between the officials here and those at your end ; and, in the result, after knowing all that the men on the spot have to say on the matter, the London authorities undertake the formulation of final views.

No such careful scrutiny is possible on the present occasion. The Indian Government should be aware of this practice from their experience of the procedure in the case of Blackett's Reserve Bank Bill.

How is it, then, that despite such knowledge, the present Finance Member has shown such utter indifference to the interests and special needs of the Far Eastern Banks?

It is generally believed here that Sir George Schuster is cocksure of getting the Bill passed in the present Assembly—whatever the Bill may be like ; and that he is not keen on giving opportunities to the critics for the ventilation of their views.

Of the Reserve Bank scheme in the present form London City Circles are frankly critical. Economists are equally suspicious of all this hustle.

For one thing, no one here is convinced that the present is the best opportunity for endowing India with a central banking institution. From every point of view, there is a case for the postponement of this measure.

It is, everyone agrees, a most unpropitious time from the standpoint of international financial conditions. If the Reserve Bank is an economic necessity, current economic conditions in the world should counsel delay. If the Reserve Bank is inspired by political motives, the least that the authorities could or should do is to give suitable opportunity and sufficient time to the interests concerned to study the Bill and scrutinise the clauses in all their aspects.

The Exchange Banks are invited, I learn, to send a representative to confer with the Committee. A representative will, doubtless, be sent. But no one blieves that any great use will come of it. The authorities seem to have made up their minds, and are not eager to offer facilities to the other side to state its opinions.

The policy of the City is to back, as far as possible, such officials as satisfy the description of being "men on the spot". It is finding it extremely hard to swallow this kind of pill on the present occasion.

The City will be pleased and greatly relieved if the break-neck speed abated a little.

Compared to the Bill of 1927 and 1928, the present Bill is in a far from finished condition. There are many points on which it is frankly admitted that further considera-

tion on the part of the authorities themselves is necessary.

Such consideration must be finished by the middle of this month, that is, in the space of less than four weeks between the end of the Assembly session and the meeting of the Joint Committee.

There was a unified purpose in the earlier Bill. There is a lack of homogeneity in the Bill now under discussion—a definite indefiniteness, an abundance of provisions yet to be thought out.

Sir Basil Blackett gave ample opportunity for leisurely and detailed criticism of his Bill at each stage; and, yet, he could not pilot it safely through the Assembly. Sir George Schuster seeks to choke off criticism; and, curiously enough, he is confident of success in the matter of getting the Bill on the Statute Book.

While Sir George does not care for the ideas of others, he seems to have his own firm and settled ideas.

There is a strong report in well-informed circles here—it is very much more than rumour, the proverbially lying Jade—that Sir George wishes to have the Bill passed by November so that he may act on the following time-table:

December—Nomination of the first directors.

January—Issues of shares to the public.

February-March—Arranging other preliminaries like the staff, premises etc.

April—Inauguration of the Bank.

Mid-April—Retirement of Sir George Schuster.

Sir Basil's ambition was to live in the economic history of the world as the creator of India's Central Bank. The fulfilment of a like ambition will fall to his lucky successor!

Another report—no rumour, let me emphasise again—is that Sir Howard Denning is to be appointed the first Governor.

Denning stock is at a high premium both in Simla and Whitehall.

But Denning Stock will not command *any* price in London city. There will be strong resentment if this appointment were made.

The main justification for a Reserve Bank in the case of India is that the management of currency should be removed from the hands of departmental officials who, however able otherwise, are but amateurs in currency and banking matters; and that currency and other matters should be handed over to a bank which has a *personnel* with the necessary technical equipment, experience, training, instinct and judgment.

To start a Reserve Bank and make a quondam departmental official the head of the Executive would run counter to the very spirit and purpose of the Reserve Bank proposal.

Sir Howard Denning may be, in official circles, deemed a pattern of efficiency for his work as Controller of the Currency. But the public know him as the official who carried out the policy of deflation to the point of danger and disruption and who saw the credit of India sink lower and lower, with the result that the borrowing rate rose from 4¾ per cent to 6½ per cent.

Sir Howard may know the Secretariat technique. He is ignorant of banking and market technique. He is a stranger to the work and practice of central banking.

His appointment would cast a serious slur on the *bonafides* of the Indian authorities.

I also understand that Sir Cecil Kisch is thought of as the successor of Sir George Schuster. —

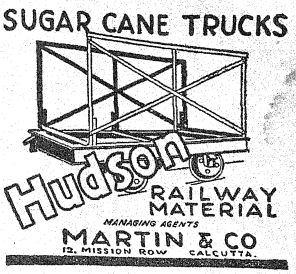
Clive Street Gossip



The Joint Select Committee on the Reserve Bank Bill will be meeting in Delhi in another ten days' time; and one wonders if it can be anything more than so much labour and time and taxpayer's money lost. I cannot but think that Sir George Schuster is more keen on carrying through some or any scheme of Reserve Bank than on fashioning what should be the ideal plan to suit India's special needs and peculiar conditions. The *hukum* has gone forth that there should be a Reserve Bank ; and Sir George shall see to it that there shall be a Reserve Bank. That the scheme as now envisaged in the Bill will bring forth only an uncouth, clumsy and shoddy contraption does not seem to worry the Finance Member. If you ask him "what about the ratio?", he says that the time is not Now ; that in present chaotic conditions of world finance, it were silly to contemplate any change ; and that the machinery, such as it is, should continue to creak on, with an external parity for the rupee, out of all tune with internal conditions. "What madness is it," exclaims Sir George in pious and sanctimonious horror, "to desire a change from the link with a currency which has regained its supremacy?" Sir Cowasji Jehangir and Mr. H. P. Mody dance to the same tune ; and their friend and admirer applauds the cleverness of the performers. The slogan of these stalwarts—two from Bombay, be it noted—is, "The time is not Now" !

* * *

While such is the attitude of the Chairman of the Bombay Millowners' Association and of the Acting Leader of the Opposition, the Currency League has been revived with a *personnel* amongst whom, to their embarrassment, Sir Cowasji and Mr. Mody will find a good few on whose side it is their lot or task to fight many a common fight. Both of them continue to be believers in a lower ratio ; but they are prepared to give to Sir George a free hand in this mater during the current discussions on the Reserve Bank. The Currency League considers that time is the essence of the mater ; and its object is "to organise and educate public opinion on the desirability of obtaining an *immediate* devaluation of the rupee,and of opposing the perpetuation of the 18d. sterling ratio *as is sought to be done through the Reserve Bank Bill.*" "Let us allow this Bill to be passed now, and leave the ratio issue to the good sense and generosity of Sir George" say in effect, the two spokesmen of this Anti-Bombay point of view. "This Bill must not be passed unless the ratio is changed," say the promoters of the Currency League. "Once this Bill becomes an Act, Sir George and or his successor would care a rap for all the appeal now being made to good sense and generosity by futile optimists." The "Now or Never" League have, on the committee, such notable Bombay names as Seth Mathuradas Vissanji, Sir Munmohandas Ramji, Sir Purshottamdas Thakurdas, Sir Naoraji Saklatvala, Mr. H. H. Sawyer, Mr. F. E. Dinshaw, Mr. S. N. Pochkhanawalla, Mr. Walchand Hirachand, Mr. N. M. Mazumdar, Mr. Chunilal B. Mehta, Mr. A. D. Shroff and Mr. J. K. Mehta.

* * *

I understand that Sir Ness Wadia has been approached to become the President ; and on his arrival this month in Bombay, a definite announcement may be expected. Mr. E. J. Bunbury, who is now in England, has been wired for permission to use his name as Vice-President. But for Sir Victor Sassoon's departure, this month, for the East, he is sure to have been a prominent member of the committee. In other words, here is a League on which the Tata, Sir Sassoon J. David, Forbes Campbell, Wadia and Century groups are strongly represented and which may, therefore, claim to speak for more than half the mills of Bombay. And what it stands for, elicits no active sympathy from the gentleman paid to preside over the Association embracing the Bombay mills. As for the other cotton mill centres of India, Ahmedadbad is solidly for reversal of the ratio on the present occasion. Cawnpore furnishes the piquant example of a city where the European and Indian mill interests are vigorous champions of a lower ratio. Coimbatore is in the same category.

* * *

But why give a sectional turn to this discussion? No one in India capable of thinking and reasoning can agree to a state of affairs, in which, while Britain has claimed the right to depreciate her currenccy as she likes, and while, in the steriing area itself, New Zealand and Australia have asserted and exercised their right to depreciate their currencies not in relation to, or in consonance with, the depreciation of sterling but in the sole interests of their domestic economy, India is to be denied a like freedom and discretion. That freedom and discretion is needed now and here. After the Reserve Bank Bill is passed, it will be TOO LATE. If the Bill is placed on the Statute Book, the demand for the revision of the ratio would be met by the facile reply that so soon after the inauguration of a central banking institution, no far-reaching changes should be effected. Ain't that common-sense? And how egregiously silly of these agitators to put forward so ill-timed a request! Then will the constitution come. And, with it, the *regime* in which no legislation affecting currency or coinage or exchange could be proposed without the previous consent of the Governor-General. If we acquiesce in the ratio in the present context, our case will go against us by default. Sir Cowasji and Mr. Mody want us to lose our case by default.

* * *

Lest Sir Cowasji or Mr. Mody should say that I have not interpreted their views correctly, I have, though I listened to their speeches of September 12 from the gallery, read and re-read the printed proceedings of the Assembly debates ; and I believe that it were safest to quote their own words.

* * *

Mr. Mody doth protest (too much, in fact) that the linking to sterling was an unwise thing. "I cannot say that is not my opinion now"—he emphasises. But listen to this "but".

> "I feel equally strongly at the same time that this at any rate is not the occasion for disturbing the *status quo*. I do not think that in a period of flux, when currencies and currency systems are being changed from day to day, a change of this vital character can be made without very considerable dislocation of the finance, industry and trade of the country; and, therefore, inspite of all the criticisms that have been uttered in public, I hope very strongly that this, at any rate, is not the time for disturbing the position which exists.

As regards the ratio, he again protests that "this ratio has brought very great evils in its train". The "but" to this protest is equally ominous :

"But, here, again, I say that we cannot sit down at a Select Committee table and say 'Now this ratio is bad; let us see what ratio we are going to fix'. That is not the way in which the ratio will be altered or will have to be altered. But I do feel at the same time that it is up to the Government to watch the situation very carefully and from day to day and revise their policy the moment it is found to be necessary. It is a matter of common knowledge that the Government of India would have been forced off the ratio had it not been for the very fortuitous exports of gold. I am not sure that before the Reserve Bank comes into operation, the Government will not have occasion to revise their policy and to consider whether the ratio ought not to be altered. I say that the Government ought to keep this public feeling in this country perpetually in view. They must have the courge to retrace their steps, to see the folly of their ways, and when it is realised that the ratio cannot be held together without serious detriment to the interests of this country, then they must immediately revise it".

What a hope! Sir George said, in October 1931, that he would be watching the situation as regards gold exports. That watching process continues up to date. Mr. Mody wants Sir George to start watching the situation as regards the ratio also—the watching should be done most punctiliously, from day to day. And the moment Sir George finds it necessary to revise their policy, he should revise it! For his part, he would be only too glad to add this ratio business to the list of subjects which need watching; he may go further and aver that he is already watching it. In the result, the ratio, instead of being revised, will be the object of eternal vigilance and unceasing watching. In return for such watching, Mr. Mody is prepared to admit that nothing could or should be done now!

* * *

Sir Cowasji has no patience with men of little or slow intelligence like Mr. B. Das and ourselves. He could read, study and digest important bills of far-reaching significance in twenty-four hours, which Mr. Vidya Sagar Pandya and Mr. Das could not do. The Bombay Knight has, therefore, no hesitation in laying down the law on the *what* and *how* of the ratio. He starts by protesting even more vehemently than the earlier speaker that so far as he can judge public opinion in India, "it is that 1s. 6d. ratio is wrong and that Government can with benefit to the country change that ratio". "Public opinion today is stronger than ever it was before, at least in my part of the country". But what is the occasion today for considering the ratio? What right has the legislature to poke its nose into this affair? Sir Cowasji dilates on two propositions on which he will find himself in a hopeless minority. The first proposition is this:

"We are not considering the policy of exchange when we consider this Bill. The main object of this Bill is to establish a Reserve Bank".

* * *

The second proposition is this:

"We all know that this ratio cannot be changed by legislation. There are constitutions which lay down that the policy of exchange can only be changed by legislation; that is the constitution in England today. The British Government cannot make a radical change without legislation, but what does the British Government do? What did it do? It took action overnight and then went to the Legislature to get it ratified. That is the only way in which the ratio can be changed in any country; whatever the constitution may lay down, it is the Government and Government alone that can take action overnight and come before Legislature and say: 'We have taken the responsibility for doing what we thought was in the best interests of this country; we ask you to ratify it. But you cannot allow the Legislature to decide what the ratio should be, because speculation would be rampant and the country would be ruined long before you legislate. People could be speculating in every part of the world with your exchange. Therefore, whether it be this Government or whether it be any Swaraj Government in the future, the Government alone will have to take the responsibility of changing the ratio and presenting a *fait accompli* to the Legislature. Therefore, under these circumstances, it is evident that it was never intended that we, as a Legislature, should decide questions of exchange when this Bill was brought up. But it is perfectly in order, as you know, Sir, for me to discuss this question and I think it is a fitting opportunity to remind my Honourable friend opposite of the point of view of India of which perhaps he is well aware. But I do feel that we are safe in the hands of the present Finance Member and that he will give India's opinion every consideration."

What a hope again! The British Government acted overnight. Is Sir Cowasji aware of one single instance in the past which would warrant his hope that our Government, too, would act overnight and justify his confidence that we are safe in the hands of the present Finance Minister? Sir Cowasji and Mr. Mody are the two Indians who have a die-hard optimism and pathetic faith.

* * *

The fact of the matter is that those who were taken on a joy-round to London feel it incumbent on them to out-Herod Herod in the matter of the Parliamentary Paper on the Reserve Bank. They are all hyper-sensitive when any remark is made about their credentials or qualifications or competence. It was a packed committee, said speaker after speaker in an Assembly which, itself, should be described as a packed Assembly. Mr. Pandya rubbed in this point pretty raw. So did Mr. Reddy. This roused the ire of the champions from Bombay. "We were not a packed committee", thundered Mr. Mody. "We were men of free will and good report. We understood the principles of Reserve Bank or any other bank as well as anyone else. We did our work more honestly than could most members of this Legislature." The jaunt to London consisted of two sections thase to confer on the Statutory Railway Authority, and those to confer on the Reserve Bank. The votes of this entire lot of merry makers are at the disposal of Sir George for any kind or manner of Reserve Bank Bill he wants. He has the dummies behind him, and to the right of him on the Treasury Benches. He has, further, the members of the one or two amorphous parties formed partly for the purpose of avoiding the other parties and partly for justifying a few more new leaders. Everything considered, Sir George has an easy walk-over.

* * *

Yet, he goes about as though he has a tremendous responsibility, an arduous task, an onerous duty to discharge. It is nothing of the kind. If Sir George did really want to cross swords with men worthy of their steel, he would not have brought the Bill into a spineless Assembly like the present. He would have waited till the new elections, which are bound to take place by the end of the next year at the latest. He does not seek to elicit *bona-fide criticism*. He is content with the authorship of the Bill on a topic in regard to which his illustrious predecessor had such bad luck. Sir George counts on his luck. And he is both shrewd and lucky.

On the ratio question, any action at the present moment is undesirable because of world chaos. But on the Reserve Bank issue, immediate action is warranted, Sir George seems to argue, by that very world chaos. What queer logic! What indecent haste!

BOMBAY—FORBES BUILDING, HOME STREET

What is the meaning of all this unseemly hustling? A Government, which sought to economise in regard to the travelling allowances of the delegates to the World Economic Conference, paid cheerfully for a score of legislators of whom most knew least about Reserve Bank or Railway Board. The report of this committee is published in August; and the public could not get copies till a few days after publication. The Bill is introduced in September. Discussion takes place within twentyfour hours of introduction. A Joint Select Committee is appointed from a pliant Legislature, to meet in October and finish their labours. A special session of the Assembly and the Council of State is called for November, so that the Reserve Bank Act would be an accomplished fact by the last week of next month. May I ask again, why all this hurry and hustle?

* * *

For an answer to the query, I invite attention to an important communication sent by our London Correspondent and appearing after the Editorial Section. The likely time-table of the further steps to be taken is given by our Correspondent; and this should cause serious misgivings. The *personnel* kept in view in connection with the Reserve Bank is given; and this should occasion most grave disquietude. If our Correspondent is right—and on his being well—informed and on his sense of responsibility, we have not the slightest doubt—it is time that the public in India, especially our commercial bodies, bestir themselves and enter emphatic protests against the proposals. The Bill will be passed in November. In the month or two following, Sir George will appoint the first Board of Directors and also arrange for the issue of shares. The first Governor is to be likewise appointed; and who would not wince if Sir Howard Denning were he! The Bank is to be inaugurated on April 1 (note the date!) and to be in good working form by the time Sir George Schuster leaves in mid-April. Sir George will depart a happy man, his great ambition fulfilled, a halo round his head as the creator and inaugurator of one of the world's important central banks, satisfied and pleased that he has showered patronage as the last act of his *regime*. For the whim and ambition of one man, the millions of India are to have a Reserve Bank without time or opportunity to give it calm, careful and dispassionate consideration.

THE GATEWAY OF INDIA

(By Wire)

Bombay, October 13.

The money market in this City is dominated by the Currimbhoy debacle and its repercussions. There were runs on the Bank of India, the National City Bank of New York and the Central Bank of India.

The banks, as was to be expected, met the demand without any difficulty. All these institutions have ample liquid resources and would be in a position to meet raids of even tenfold severity.

All the same, they had to call in all the call funds they had put out in the market. The Central Bank and the Bank of India happen to be, in usual conditions, the largest lenders of short money.

The result was a frenzied demand for interbank money and hectic rise in rates. Money was unavailable, at one time, at even 5 per cent.

Towards the finish, the runs have abated, the demand for funds has shrunk, and rates have fallen.

Considerable recourse was had to the Imperial Bank which supplied funds as promptly as they were needed.

The liquid position of the banks was fully demonstrated; and equally proven was the readiness of the Imperial Bank to lend succour for any amount without any notice.

It has been, altogether, a week of alround anxiety, continued unsettlement, and growing uncertainty.

Curiously enough, the banks are, in the main, unaffected by this tragedy, as their advances are secured. It is the bazar parties that are faced with losses possibly beyond their capacity to bear in their present enfeebled condition.

It is important that it should be made widely known that the failure of Currimbhoys cannot affect the Banks for the simple reason that banks were forewarned and, therefore, forearmed. Runs by depositors are meaningless and only show up the proverbial timidity of the Indian clients of banks.

Between the Bank of India and the Central Bank, cash and liquid resources amount to nearly Rs. 25 crores. As for the National City Bank, their assets of a fluid character in India are more than adequate; and it can draw on London and New York for indefinite amounts.

It is unthinkable that depositors should give way to nervousness in respect of institutions so strongly placed. It is the unthinkingness of depositors that is at the root of such pressure on banks.

The true facts about these and other banks should be given the widest publicity, as spasms of this kind do not do any good to anybody and are a sorry reflection on the Indian's attitude towards credit institutions.

(From Our Correspondent).

Bombay, October 11.

The coincidence of the crisis in Currimbhoy's affairs with the inauguration of the Currency League may well be used to point a moral and emphasise a lesson. It is the currency policy of the Government that is responsible for the negativing of the protective measures adopted by the State in regard to the cotton mill industry. If only India had been free to choose a ratio that suited her internal conditions best, her agriculture, trade and industry could have received the maximum benefit from the active policy of protection to which our Government are committed.

As it is, what is given with one hand is taken away with the other. The import duties are put up; and there has been protection afforded by the higher duties. But all such benefit has been offset by a stubborn policy as regards exchange.

To start with, the ratio was fixed at the high altitude of eighteenpence which in itself inflicted great harm on our industries. Subsequently when

every country asserted its right to depreciate its currency in relation to internal conditions, India alone was tied to the apron-strings of sterling. The result is that while the cotton mill industry has to put up with the taunt of asking for more and more and getting more and more, it has, on balance, received nothing.

Whatever the amount of protection that the Government might give to any industry, however high the import duties may be raised and however bounteous the bounties given, no real benefit can be reaped if, at the same time, the exchange policy is not suited to the intrinsic needs of the situation and if, by railway rating and otherwise, needless burdens are imposed on industry.

What the cotton mill industry gained from the duties, it more than lost on the heavy freight it had to pay owing to the unsympathetic attitude of the railways and by increased competitive power which its rivals have had owing to their freedom as regards their exchange policy.

Another interesting case that deserves mention in this connection is the Tata Iron and Steel Company, for which the State has done so much by way of according it protection through import duties. But are the Government aware that by the obstructive attitude now being put by the Bengal Nagpur Railway, all the protection that the industry receives might be reduced to nothing?

The agreement for freight concession as between the Tata Steel Company and the Bengal Nagpur Railway came to an end last July. In the nature of the case, an agreement that has run for nearly two decades must be automatically renewed. If it is not so renewed, the conclusion is obvious that the Railway concerned seeks to take advantage of the position in which the Company in question is bound to accept any terms it dictates.

If the Tata Steel Company is helpless in this matter, it had least enough enterprise to put up an alternative proposal to the Government. Why not allow us to construct our own railway lines to our mines?—asked the Tatas. Sanction for building these lines is refused. At the same time, the Government cannot see their way to use their influence with the Bengal Nagpur Railway authorities to continue an arrangement that has worked so long and that should be renewed as a matter of course.

The Railway Board say that it is a matter in which a company-managed railway is involved. But, after all, what is a company-managed railway? It is pampered managing agent making the most of the assets belonging to the State and enabled to throw on the shoulders of the State all manner of expenditure. This is an unfair arrangement in all conscience. The Bengal Nagpur Railway must be pulled up and told to behave becomingly.

All this emphasises that if the State is really sincere in its attitude of protectiveness to industries, it must not content itself with studying the question of import duties or bounties. It must have a more comprehensive understanding of the various economic factors involved. It must have a wholesome and national currency and exchange policy. The railways should be willing to lend their fullest co-operation for the success of the Government's protection policy. Unless this is done, it is possible for some factor or other to offset all the benefits that protective measures are intended to afford.

Why is Japan able to compete with India inspite of her having to purchase most of her raw materials from foreign countries and to sell manufactured goods to foreign markets? It is because there is complete co-ordination between the various sections of her national life, with a view to ensure that Japan's economy is advanced in all possible ways.

There is the strongest case for a co-ordination of this kind in India. The failure of the Currimbhoys is due to the lack of such co-ordination. The inauguration of the Currency League is to draw pointed attention to the need of such co-ordination.

OLYMPUS

(From Our Correspondent)

Simla, Oct. 12.

Mr. Hannay's Presidential Address at the Railway Conference—Defence of Statutory Railway Authority—Pleas for fresh capital expenditure—Parties galore—Cotton growers fail to play into Japanese hands—Punjab suggests more mills and less Cotton—principles clear, but formulae difficult.

After the worst of summers, Simla is now experiencing a spell of glorious weather which has charmed our guests from Japan and Lancashire. Every one feels that it is a pity that Simla should be deserted at a time when it is at its best. But it cannot be helped. The Government of India Secretariat has already moved down except for the Department of Sir Joseph Bhore, which is most busy, on the one hand, in handling the Indo-Japanese negotiations and, on the other, in conducting the annual meeting of the Indian Railway Conference Association which opened yesterday.

* * *

Formerly the Railway Member used to take an active part in the proceedings of this Conference but, on the present occasion, Sir Joseph Bhore is too busy with the trade negotiations to spare any time for the Conference.

Another handicap the Conference has suffered from is the absence of the permanent Chief Commissioner, Sir Guthrie Russell, who returns to Simla only on the day the Conference disperses.

* * *

The setting of the Conference was likewise less impressive this year and robbed its proceedings of an element of dignity which the Assembly Building used to impart to it. The Trade talks are being conducted in these buildings and the Railway Conference had to be held in a room in the Railway Board Offices.

* * *

The Presidential address of Mr. Hannay, Agent, E. I. R., was brief and lucid but somewhat tame. Perhaps, the reason is that it is difficult for people with mere administrative experience to look far into the future and plan on a broad scale. Mr. Hannay is a competent Railway Agent and certainly deserved the honour bestowed on him.

* * *

There are three subjects that Mr. Hannay dwelt on in a most competent way. (1) The losses on public travelling without tickets. For over a decade various remedies have been suggested and tried but without result. (2) The road-rail competition. This is causing a loss of Rs. 2 crores to Rs. 3 crores to the railways and is a menace to their future earnings. (3) The Statutory Railway Authority. It is in the best interests of India, said the President who claimed: "I do not expect the opponents to the suggested safeguards to agree with me, but at least I hope that they will give me the credit of being entirely disinterested as in a few months, I shall have left this country for good. Perhaps they will even believe me when I say it is the interests of India and Indians, that I have primarily in mind ; it could not be otherwise after spending, including the years of my early boyhood, over forty years in this country."

* * *

On a superficial view, it might look paradoxical that after having argued strongly that railways could not pay in future, Mr. Hannay wanted the Government to take advantage of cheap money conditions and launch on a new railway programme. The fact is that poor earnings affect the current position and not the capital programme.

The Indo-Japanese Conference continues to prove of thrilling interest. Outside the Conference halls, lunch parties are the order of the day.

* * *

The Japanese were the first to initiate this vogue. They invited the British and Indian press-men to lunch with them. Lancashire, not to lag behind, did likewise. Then the Bombay Millowners Association thought that it should not look small ; and it gave lunch to a large gathering in honour of the Japanese and Lancashire delegations. The cotton interests thought that their distinct individuality was being thus overshadowed and they have called an equally large gathering to their lunch on Friday.

* * *

And lest it should appear that Bombay Mill-owners lead the Indian side, Mr. Kasturbhai Lalbhai of Ahemedabad and Lala Sri Ram of Delhi have invited a number of guests to lunch on Thursday. Mr. Nalini Ranjan Sarker and Sir Leslie Hudson will, doubtless, play the host in their turn.

* * *

The Government side, too, has not been blind to their obligations in this respect. Sir Joseph Bhore and Sir Frank Noyce gave a joint At Home to the Japanese Delegates ; and now Sir Fazli Hussain, the third official delegate on the Indian side, has arranged an At Home to meet the Japanese Delegation on Thursday.

* * *

The Punjab officials thought that they had a direct interest in the negotiations. So, Sir Sikandar Hayat, the Revenue Member, gave a dinner to the Japanese ; and Sir Jogindra Singh, the Minister for Agriculture, separately invited Lancashire and Japanese delegates to functions at his residence.

Social functions, have, therefore, been held on a sumptuous scale and our guests must have felt vastly humoured at this display of the traditional hospitality of India.

* * *

But what about the negotiations behind the scenes? It is not all plain sailing. The Japanese accuse the Indian mill interests of being most stubborn. They feel that the cotton growers' representatives have not been given their due voice in the matter and that the Government seem to be prejudiced in favour of the mill industry. But when they got into touch with the cotton growers, they had a shock.

* * *

The Punjab Government officials, I understand, told them that if Japan did not consume their cotton, they would encourage the opening of mills in the Punjab and try alternative crops. This brought about a better appreciation of the position, with the result that the Japanese delegates began to feel less confident of using the cotton interests against mill interests.

They, however, still have their chance with the Government of India, who may be expected to look after the interests of the consumers.

* * *

The attitude of the Government of India may be summed up thus. "We do not mind Japan sending all kinds of goods into India so long as their import is restricted to a given quantity and above a specified price, which quantity should be variable at intervals, according as Indian industries develop and reduce the need for foreign goods.

* * *

To enunciate this principle is one thing ; to put it into effect is quite another matter. Herein lies the rub.

"HILLBIRD."

SOUTH INDIA

(From Our Correspondent)

Madras, Oct., 11.

Much work of a solid, substantial and enduring nature has been done in the past decade to improve the economy of this Presidency ; and if no immediate or tangible result is to be noticed, it is because of the universally blighting influence of the world depression.

When brighter conditions set in in the international sphere, Madras is now equipped to take the fullest advantage of the better opportunities to come. Amongst works which should greatly strengthen the economic stamina of this province may be mentioned (1) the Pykara Hydro-electric Power Scheme ; (2) the Mettur Dam Project ; and (3) the Vizagapatam and Cochin Harbours.

I may also add that short-cut routes have been established at many points in the South Indian Railways system ; and this should greatly reduce transportation costs in respect of the movement of merchandise and produce.

As a result of the supply of power from the Pykara Scheme, an industrial town like Coimbatore is now provided with power for its large number of cotton mills at something like .45 annas per unit, which, I believe, is the lowest rate in India. More and more towns are being supplied with power from this project. Coimbatore was among the first to reap this benefit. Most of the mills have dismantled their own generating plants and are now taking power from the Government. This means, in some cases, that the machinery and plant in connection with the generation of power can be sold out at fairly remunerative prices, thus enabling the fixed capital expenditure to be reduced at a time when any addition to liquid resources is greatly welcome.

For instance, the Vasanta Mill, with which the family of Sir Shanmukham Chetty is associated, was able to dispose off its power plant for nearly Rs. ¾ lakh to the Government Electrical Department. The amount thus released, together with the proceeds of the preference loan issued early this year, is being utilised for the opening of the weaving shed.

In the case of the other mills, the Government might not be able to buy their plants but owing to the development of city electric supply companies in a good few of the important centres of South India, there should be no difficulty in finding purchasers at reasonable prices.

Till a few years ago, Madras Presidency was most backward so far as the amenities of electric lights and fans were concerned. Considerable progress has been made in this direction in recent years. The progress has been accentuated by the cheap supply of power in large quantities from the Pykara scheme.

As regards the town electrification projects, Messrs. Seshasayee Bros. may justly claim the credit for having done great pioneering work and setting an example for economical and efficient husbanding of resources. They carried out the electrification of Trichinopoly at a total capital cost which, compared to what has generally been spent in respect of the electrification of a city of like population in any other part of India, would be less than half. The consumer pays much less than is the case in other centres. It is, therefore, no matter for surprise that the shares of this company are at a substantial premium.

Messrs. Seshasayee Bros. have now sponsored the East Tanjore Electric Supply Corporation with a capital of Rs. 3 lakhs. The area of supply to be undertaken by this Corporation comprises four taluqs. The population in the area is eight lakhs. Yet the managing agents hope to be able to keep the capital expenditure well within Rs. 3 lakhs. If one studies the projects in North India of similar

dimensions, the capital raised would be over Rs. 10 lakhs.

As an example of economical capital outlay for a city of considerable size, the electrification scheme of Madura is most interesting. The capital outlay is less than Rs. 7 lakhs. The income works out to over 15 per cent. The project was carried out by Mr. B. C. Roy who is now the Lighting Superintendent in your City.

Amongst others who have secured license and are working electrification schemes in South Indian towns may be mentioned Messrs. Octavius Steel & Co., and Messrs. C. Rajam & Co.

In respect of all these propositions, there has been no difficulty as regards securing capital. On the whole, South India may claim to have shown to the rest of India the best and cheapest way of undertaking projects for electrification whether on a large scale from water power or on a comparatively small scale from generating plants using fuel. At the rate in which developments in this direction are taking place, this Presidency, along with, and inclusive of, Mysore which has the brightest record from this point of view, would, ere long, take the front rank amongst provinces in which the highest percentage of the population enjoy the amenities of electricity.

The Mettur Project has practically come to its end. Hereafter, the *Kauveri*, which used to have water only for half the year, would have a perennial flow.

It has been also arranged that in case the power supply from Pykara should fall short of demand, measures could be taken on hand for generating power from Mettur. The pipe lines have been laid; all that would be necessary is the fixation of the turbines.

* * *

The Vizagapatam Harbour is also an accomplished fact. Only last week-end the Harbour was thrown open to traffic. The formal opening of the Harbour is to be done by the Viceroy towards this year-end. But, meantime, vessels have begun to arrive. The first commercial ship to enter the harbour was s.s. "Jaladurga" of the Scindia Steam Navigation Company. The entrance of the ship to the harbour to Berth No. 1 was watched by a monster gathering of the public who crowded on the quay wall to witness the unique occasion.

In honour of the memorable occasion the local agents of the Scindia Steam Navigation Company were "at home" to the public.

Nearly seventy-five years ago, one Mr. E. C. G. Thomas wrote a book under the title "Vizagapatam —the Port of the Central Provinces." Since then various schemes were prepared from time to time. As part of this scheme a railway line from Vizagapatam to Raipur in the Central Provinces was given the most careful consideration. Both the projects have now been completed. The railway line to Raipur was open to traffic on March 31, 1932. The Harbour scheme may be said to have fructified with last Saturday's ceremony. The following description of the new area opened up by this railway line would be read with interest in reference to Vizagapatam Harbour.

> This new railway line, which is a broad gauge one, runs through the western portion of the province of Behar and Orissa and has opened up a great tract of country which had hitherto not come under the influence of railways. Vizagapatam port, situated roughly at a distance of about 330 miles from Raipur in the Central Provinces, is some 180 miles nearer to central part of India than any other sea port. Lying midway between the northern and southern boundaries of India, Vizagapatam is the natural outlet to the sea of the country lying to the west and north-west of the Vizagapatam port, nearly 350 miles in length and 250 miles in width reaching up to Central India. This part of the country, through which the recently constructed Vizagapatam-Raipur railway lines runs, is rich not only in field and forest produce but also in mineral wealth. The enormous quantities of produce which hitherto could not find an outlet owing to the paucity of communications and difficulties of transport, will from now on find their way to the coast at Vizagapatam. Apart from increased quantities of cereals that are expected here for shipment, Vizagapatam looks forward for large quantities of jute, hemp, cotton, tobacco, oil seeds myrabolams, nux vomica, mowra seed, and more than any other article, manganese ore, all in great demand in the European markets. Manganese ore had been for a very long time a principal commodity of export from this district, and proximity of this port to the mining districts of the Central Provinces has created special facilities and the authorities expect that within the course of a few years nearly half a million tons of manganese would be shipped from Vizagapatam."

* * *

Sir Mirza M. Ismail, the Dewan of Mysore, is one of the most interesting and impressive figures in the ranks of India's statesmen. In all his utterances, there is a broad urbanity, genuine nationalism, nobility of sentiment and aptness of phrasing. I have to refer, in this week's communication, to two speeches of the Dewan; in the one, he has to express chagrin and disappointment—in the other, he has to furnish encouragement and to hearten his audience. In both alike, he takes a dignified standpoint and speaks with a directness and fervour which disarms critics and enthuses friends..

The Mysore Sugar Mill Bill was thrown out by the Mysore Assembly. Why? The investment in the Badravati Iron Works has remained a sore point with the Mysoreans who are proud of this great industry but critical of the heavy price paid to sustain it; and any industrial proposition is, accordingly, subject to a special degree of scrutiny, even suspicion. Yet, the sugar mill promoted by the State is, by far, the best sugar proposition in India; and the control of the sugar industry, for which the Bill provides, is both urgent and necessary.

To an Assembly that refused to sanction the measure, the Dewan makes an appeal, which is, at the same time, a chiding. Or you may call it a chiding, which is, at the same time, an appeal for more becoming behaviour in the future.

The measure was clearly in the public interest, said Sir Mirza; and the Government were entitled to general co-operation.

> "By withholding this, Government's difficulties have increased but that is an injury not to Government but to the State and to the prestige of democratic institutions. It is always Government's hope that this democratic Assembly may justify itself in the fullest sense. It has to express candidly popular hopes and apprehensions as well as to consider proposals brought forward by Government with that reasonableness, which may fairly be expected of representatives selected for statesmanlike duty."
>
> "The policy of constructive co-operative usefulness will be of immense immediate value to the State, tending towards the development of truly democratic institutions, especially in view of the fact that democracy these days is as suspect as tyranny judged solely by its practical value."

The second utterance, to which reference should be made, is the speech made by the Dewan in distributing awards to the successful exhibitors of the All-India Industrial and Agricultural Exhibition which concluded last week. Foster the Swadeshi habit—was the burden of Sir Mirza's song. The value of exhibitions of this kind—the Mysore Exhibition has been held uninterruptedly for 45 years—is forcibly brought out in the following paragraph:

> "It is, I believe, quite a common experience for people to come to this Exhibition, and when they see Indian-made fountain pens and electric lights, delightful fabrics and sumptuous eatables, to exclaim. 'I had no idea that things like this were made in India.' I put it to you that such a remark is not a matter to be proud of, but rather a reproach."

His concluding peroration is in great and impressive form:

> "In conclusion I ask you to look at this question of Swadeshi as one of mutual benefit to all concerned.

(*Continued on page* 923)

THE RYOT AND THE OIL ENGINE

(By P. S. Seshadri, School of Tropical Medicine.)

Calcutta, October 13.

Devising a cheap and efficient means of raising water, particularly for irrigation from wells, canals, rivers and tanks, is a widespread problem in India. The quantity of water that can be raised by existing methods such as the mote wheel (*kamalai* or *charsa*), the donga, the Persian wheel or the piquota, is small, not more than 2000 gallons per hour by the Kamalai from a depth of 20 ft. Crops have to depend on artificial irrigation either entirely or as a supplement to rainfall. The Indian agriculturist or cultivator has not yet overcome his traditional preference for using animals as his main source of power ; nor will it be advantageous to him entirely to dispense with his pair of bullocks under existing conditions. An efficient pair of bullocks is an indispensable necessity for the average small cultivator.

However, there is plenty of scope for the introduction of mechanical devices for lifting water for irrigation. In the villages though the majority of the holdings is with the small cultivators, not all of them keep bullocks. It is not economical for them. 30 to 35% only keep permanently a pair, another 20 or 25% keep only one bullock, mutually adjusting with others like themselves, and least 40% pay for the ploughing, pumping, etc. There are various reasons for the small cultivator not keeping bullocks, the main reason being they cannot find full work for them all through the year. In those parts of the country where there is no canal system and rain is scarce, the ripening crops very often go short of 3 or 4 waterings. The demand for water supply is very keen and a quick and ample remedy is badly in need. The capacity of bullocks is small, 2000 gallons per hour, for only 8-10 hours a day. Even during this 10 hours the rate of work is not uniform. This source of power is not available in the night. The hot sun curtails the output, so does the wind. Added to this, the cost of this power rises at this time to Rs. 2 per day. In consequence many of the fields go without water in this critical period. There are again certain crops like *pan* which require constant watering over long periods say two years, and the people cultivating these crops, as a rule, do not keep bullocks. They lift water in these areas by man power, 5 or 6 people working. The output is lesser than the mote wheel; but the cost is not much lower. Enquiries show that they will welcome a small pumping set if it was demonstrated to them. The man who keeps bullocks and has wells and land, beyond growing his food crops, does not make full use of his wels and land. Utilising bullock power for lifting water seems also costly to him ; and he uses it to other purposes whereever possible. If a mechanical device can be found for these purposes, without in any way prejudicing the maintenance of an efficient pair of bullocks, the cultivator is sure to be immediately benefitted considerably, and intensive cultivation will be started or will receive a forceful stimulus.

Windmills have been tried with such a view but have been given up, chiefly because of its uncertainty. The use of electricity for these purposes will perhaps, be the last limit of development ; but we have to wait for, perhaps, generations before our small cultivator can ordinarily go in for a small electric plant, for all his work. However, there seems to be more immediate hope in the oil engine as a prime mover. The smallest power-driven pumping set, 1½ h.p. engine and 2" pump, of reliable make, costs about Rs. 500 complete with hose pipe and all, including freight. This is portable weighing about 5 or 6 manuds. The depth of water in wells in south India varies from 15-25 feet. The output of this set is 70 gallons minute minimum, from a depth of 20 feet, more than twice that of bullock power. In summer, good wells have a supply water which requires only one pair of bullocks a day ; and that is only 3 or 4 hours work for this set. The pump being portable, another well can be taken up as soon as one is finished. The consumption of oil is roughly 2 to 2½ annas per hour. Thus the maximum work that could be done by a pair of bullocks in a day at a cost of Rs. 1½ to 2 can be done by this set in 4 or 5 hours at a cost of 10-12 annas, only half. And the set is fit for equal amount of work in the day. Here, of course, no charge is made for the operator of the set. Other advantages will be a uniform rate of output, workable at nights in times of great demand, not affected by sun or wind, no consumption when no work, low rate of depreciation, etc.

It must, therefore, be profitable for the small cultivator to learn the use of this set which is comparatively easy to operate and maintain. The only consideration is the initial cost which is many times the cost of a pair of bullocks, but this is not much for a man possessing about 10 acres of land and two or more wells. The man who has less can easily hire his set, whenever it is free.

(Continued from page 922)

We have all heard far too much of vicious circles of late. Let us start now a virtuous circle of Mysore Swadeshi Trade, and all lend our hands to keep it circling for the general good and prosperity of our State."

* * *

Another Statesman of big stature and solid achievement is Sir Akbar Hydari for whom further honours are awaiting. He is now the Finance and Railway Member in the Nizam's Executive Council. The President of the latter is H. E. Maharaja Sir Kishen Pershad Bahadur, on whose retirement early next year, Sir Akbar is likely to be appointed as the successor. Sir Akbar joined Hyderabad service after a long and illustrious service in British India. In the half decade he had been in the Nizam's State, he has further enhanced his repute by work marked by acumen, judgment and versatility. The Presidentship of the Executive Council would be a fitting climax in a career of many-sided activity and ever- expanding prestige

* * *

The members of the Tariff Board are expected to arrive in Madras next week *enroute* Mysore. They will visit the Badravati Iron Works and their purpose is to gather the relevant data and to enable the new members, Mr. Natesan and Mr. Wyles and the new technical consultant, Mr. Autha, to have a personal idea of the factories pertaining to the present enquiry. During their stay in Madras on the return journey, Mr. Natesan is giving an At Home in his residence to his colleagues.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

FUNDING THE FLOATING DEBT

The imminence of a number of by-elections at about the same time has moved Mr. Ramsay MacDonald to break his silence on matters of public policy. His speech at Kilmarnock is another of those suave pleas for himself and his Government, with which he has filled the last two years. He claims that the objects, which the Government had set before itself, when it sought the mandate of the people, have been achieved. It may be imagined there was no reference to the "saving of the pound." Equally was stress laid on the rise in wholesale prices, unaccompanied, it was urged, by a corresponding rise in retail prices, both of which phenomena were to the advantage of labour. Firstly because there could be no rise in wages without a rise in wholesale prices, and secondly, if the latter were to be accompanied by a corresponding rise in retail prices, the result would be tantamount to a reduction in real wages. Much was also made of the recent fractional increases in employment. The policy of attempting to increase the prosperity of an exporting country by levying duties on its imports was also duly extolled. And the burthen of the whole song was that all this magnificent achievement was a justification of the great treason of 1931.

Unemployment Relief

But there is yet a fly in the Government's ointment. The reform of unemployment insurance is a problem of the Sphinx ; and there is as yet little promise that Mr. Ramsay MacDonald will prove to be its Œdipus. It is well known that the Cabinet meeting on the Bill based on the report of the Royal Commission revealed considerable differences of opinion even in Government ranks. The scheme was discussed at length some time ago in the columns of *Indian Finance* ; and it should have been evident therefrom that as conceived now, it is likely to provoke the opposition of various sections of opinion without enthusing any one's support. The orthodox sections naturally insist that unemployment insurance and poor relief must be kept distinct so that the former would remain true to its name under at least normal conditions. The difficulty, however, is that with Mr. Chamberlain's prophecy of unemployment continuing at about its present level for the next ten years, not the best of actuaries in the world would be able to devise a scheme of unemployment relief which will be both relief to the unemployed and insurance, as it is commonly understood. There is a widespread demand that, as the proposed changes in the unemployment relief affect both the central government and all the local bodies with obvious bearing on the life of the average worker, the bill, as it has now been drafted, should be published well ahead of the next meeting of Parliament, thereby giving opportunity to the authorities concerned and for the general public to discuss it at length and thrash the whole question out.

Anglo-Argentine Trade Treaty

The agreement supplementary to the Anglo-Argentine trade treaty signed in May last has at last been concluded. It will be remembered that the previous treaty provided for a British loan for Argentina and for the reservation of the exchange available to Argentina from her export surplus to the United Kingdom for the imports from that country. The goods and quotas, which Britain was prepared to offer to the South American Republic were also stipulated. The agreement, however, was incomplete, in as much as Britain was not clear about the exact manner in which Argentina was prepared to reciprocate the British treatment of her exports. The normal import of British goods to Argentina amounts to about £20 million. It is now agreed that of this, £6 million of goods will have the benefit of tariff reductions or modifications. Certain other products, whose import into Argentina amounts to about £5 million, are assured of the benefit of free entry. Another £2 million of imports get no more than the assurance of stable duty. Of the goods that are to enjoy continued free entry, coal and coke are the most important. There is to be a reduction ranging from 15⅓ per cent. to 31 per cent. on various lines of cotton manufactures. Wool, linen and artificial silk goods have substantial reductions. There are also similar reductions on motor cars, glass and chemicals. Considering that the reduction extends to a wide variety of imported manufactures, it may be presumed that Argentina has decided to secure the British market even at the expense of some of her domestic industries. In so far as this represents a reversal of the trend towards economic nationalism, the Anglo-Argentine trade agreement is to be welcomed, as being in the interests not only of the two countries concerned but of the world as a whole. There is another circumstance which tends to strengthen that view. As the concessions made to Great Britain are also necessarily available to countries which trade with Argentina on the basis of the M.F.N. clause, others may also try to force their way into the Argentine market through the breach which Great Britain has now made by means of the agreement.

Lower Fares and Increased Returns

The railway returns for June issued by the Ministry of Transport during the week are of interest to India, where the problem of dwindling traffic continues in some measure to vex the railway administration. The returns for June are particularly interesting, as they show the effects on railway revenue of the bold revision of the list of fares, which was effected in May last. It is true that the lower rates were available to the public even during May. But it is understandable that the first month of the new fares could not show the effects of the change. For the public could not have had time to realise the possibilities during the first month of their availability. The result of it was that, while there was no doubt a considerable increase in the excursions the increase was more than offset by losses on the combined ordinary fares, tourist and week-end classes, which naturally suffer from the facilities offered on the monthly penny-a-mile tickets. The month now covered by the returns shows that the public had by then clearly learned to avail of the cheaper fares ; and the gains on the period excursion tickets have exceeded the revenues that were apparently sacrified at the time the decision was taken. It would be found from the following table that the increases even covered the net losses during the month of May.

G.W.R.—			
May ...	158.4	112.2	−46.2
June ...	156.3	226.7	+70.4
L.N.E.R.—			
May ...	169.4	128.0	−41.4
June ...	192.4	294.4	+102.0
L.M.S.—			
May ...	305.6	202.0	−103.6
June ...	337.5	494.6	+157.1
S.R.—			
May ...	169.5	129.3	−40.2
June ...	181.2	255.4	+74.2

It is also to be noted that the fall in average fares which had been a problem to the railways for some time past has now been checked. The cheaper fares on the long journeys are definitely inducing the public to travel further. For the tendency at

Air Mail Week

present is for long distance travel and particularly travel for pleasure, to be charged at low rates and short distance travel at high rates. To charge a passenger travelling two miles the same rate as one travelling 200 miles is clearly unreasonable, since the cost for the short journey is virtually the same as for the long. The June returns have assuredly, justified the action taken recently by the railway authorities and hold out a lesson to countries like India, where the authorities still shrink from taking any bold steps.

The 2½ Per cent. Conversion Loan

the issue of £150 million 2½ per cent. Conversion Loan 1944-49 at 94 per cent. subscribed partly in cash and partly in conversion of the £50,757,000 4½ per cent. Treasury Bonds due February 1st, 1934. Holders of the Treasury Bonds may surrender their holdings for conversion at the rate of £106-7-6 of conversion loan for each £100 of bonds. Partial allotment was given to the holders of bonds desiring to convert; and while conversion takes effect as on October 1st, 1933, there is an adjustment of interest in virtue of which the reduced rate does not begin to operate on the holdings until February 1st. The list for cash applications opened and closed on the 28th; while the list for conversion applications opened on the 27th but does not close until Tuesday, October 3. The cash issue is payable by instalments, the last of which falls on December 1, which is the best day from the Treasury point of view since some £35 million of War loan dividend money then becomes payable.

Earlier Issues by Tender

But for the first interest payment on April 1, the new loan is identical with the 2½ per cent Conversion Loan, which was offered for tender with the weekly Treasury Bills issues during March, April and May. It was originally devised for sale by tender but the offer was made only during the months of March, April and May; and during this period there were 10 allotments of the loan aggregating £55 million in all, at average rates varying from £92-9-3 the price for the last allotment and £94-11-9 the price for the first allotment. It was known in the markets for a long time ago that the Treasury was not satisfied with the market's attitude to the 2½ per cent. Conversion Loan; and the moderate size of the amounts made it clear that the Government would not be able to rope in large amounts merely by this process. Considering that the market price for the existing stock of 2½ per cent. Conversion Loan on the eve of the new issue was 94 7/16 ex the October dividend, it may be said that on the basis of the price the new loan is sufficiently attractive. It gives a yield of £2-13-2 per cent. and yields £3-13-1 and £2-19-7 according as the loan is redeemed in 1944 or 1949.

Reduction of floating Debt

The important points in regard to the new issue are in respect of the maturity date and its effect on the total floating debt. As regards the former, it may be said that the Treasury has followed in this instance the principle of avoiding overcrowding of loan maturities. The early forties are well filled with 375 million 4½ per cent. conversion in 1940, £110 million 3 per cent. Treasury Bonds in 1942 and £333 million 5 per cent. conversion in 1944. The next four years are free from any loan maturities, the £302 million 3 per cent. conversion being redeemable only in 1948 to 1953. The range of the present issues of redemption covers this gap. As regards the funding of the floating debt, it is to be noted that, out of the £150 million issued through the Bank of England, £50.7 million is bound to be taken up by the conversion of the Treasury Bonds which it is reported are held mostly by government departments and are therefore bound to be converted into the new issue. There would thus be only £100 million left by way of cash realisation.

Cash Loan through Post Office

But simultaneously with the Bank of England issue, the Post Office Savings Bank department will open its subscription list on Thursday for an amount of conversion loan 2½ per cent. 1944-49 at the same issue price of 94 per cent. Subscriptions made through the Post Office are additional to the main issue of the Bank of England and have been guaranteed full allotment. Special facilities are given for applicants through the Post Office and special precautions are also naturally taken to ensure that such applications are made by small investors and that these facilities are not taken advantage of by the bigger ones. It might be that as usual in the case of heavy oversubscriptions of loans the cash applications made through the Bank of England will be subject to a reduced rate of allotment on the basis that subscriptions through the Post Office do not materially increase the total amount of the cash portion of the loan. £100 millions may be said to be available for the reduction of the floating debt. It is true that there is £105 million of the 4 per cent. Treasury Bonds, which can be redeemed on April 15 next; but it may be presumed that there will be a separate conversion issue for this purpose. According to the latest revenue returns the total floating debt stands at the high level of £1,017 million.' Considering that the August average has been brought down to £690 million and that the subsequent increase is due in large part to the bills issued in behalf of the Exchange Equalisation Fund a reduction of £100 million in the total floating debt is a considerable change for the better.

UNITED STATES OF AMERICA

PROSPECTS OF INFLATION

For some time now the course of the Recovery Administration has ceased to afford any sensation either way. It has disappointed friends and foes alike. The pace of advance towards increased production and greater popular satisfaction has slowed down in a manner that a significant reversal may even be feared. On the other hand, the opponents have been sorely disappointed, in as much as none of the big crashes, which they had malevolently prophesied, has come about. It is something that neither side has much to twit the other with. For then, it would have been a case of wordy duel tending to prejudice the cause of economic recovery. The opponents of the Administration are still busy picking the dark spots and magnifying them as much as they can. But it is certain they can do little to alter the prevalent popular sentiment towards an administration which was the first to pull them out of the gloom and langour of the Hoover slump.

Solid work affords no sensation

The reason why the Recovery Administration finds itself in this unimpressive phase is not far to seek. After the first spate of devaluation, there is naturally a large mass of uphill work to be done, examining the conditions of each industry and determining the lines on which it might work without prejudice to any of the sections thereof or to the interests of the national economy as a whole. This is a surely an unimpressive task; and such surprises

Air Mail Week

as it may afford are only useful for those who are keen on making a mountain of a mole hill. It should suffice for the well-wishers of American economy that the Administration has not been discouraged by the stupendousness or the intricacy of the tasks which they have to perform. They have gone forward with the work, so that they can claim that the application of codes of competition for each industry is well-nigh complete. This is not to say that the arrangements in regard to each industry have been put on a basis in which they could continue to work smoothly for ever after, obviating all attention either on the part of the leaders of the industry or of the Government. It is inconceivable that any body of men, however representative and well-intentioned, could devise schemes for industries which will reveal no difficulty in their actual working. In fact, it is only when an industry has started to work, that the defects of the scheme, which it has adopted, will become clear. What has happened in America to-day is simple that each industry is now finding the shortcomings of the scheme under which the various sections of the industry and the various factors thereof have agreed to work it. It is obviously the task of the Administration to hear such complaints, and in a second consultation with the interests concerned to decide how best such difficulties can be resolved and readjusted.

Alarmist reports abroad

This phase affords immense scope for the detractors of the Recovery Administration to cable alarmist reports to countries which are not too friendly disposed towards America or her present economic experiments. The strikes that have been threatened in the various industries, particularly the coal industry, the difficulties of the oil industry in regard to gasolene price, with a vague threat of the resumption of rate-wars, the general discontent of labour that before the onset of winter there has not been a sufficient reabsorption of the unemployed, vague threats of court action in a country in which the written constitution necessarily vests the ordinary individual with the right of appeal against the decisions of the Federal Legislature to a Supreme Court, these are there, unquestionably matters which have to be dealt with by the Government on their own merits and not matters for exaggeration by unfriendly critics or reason for pessimism on the part of the people.

The Monetary Problem

One question, however, which may be considered apart from the hundreds of intricate problems connected with this industry and that, but which, doubtless, is not lacking in its own complexities, is the reconsideration of the value of the currency both at home and abroad. The state of opinion has been referred to in these columns on former occasions. It has been suggested that President Roosevelt would, if he could, avoid inflation in its grosser forms, and as it is ordinarily understood, and that he would rely, if possible, for stimulating industry on a programme of expansion of credit. For this idea he has not been able to secure the support of bankers. They have clung to their old-world opinion and have even thought of thwarting the President. President Roosevelt has, therefore, been obliged to evolve a

scheme of credit expansion in which the co-operation of those banks, who are opposed to him, would not be necessary. Such a scheme it was, that provided for the Reconstruction Finance Corporation, enabling smaller banks to liquify their resources and make themselves eligible for the Deposit Discount Corporation. Thus the President is exerting himself, might and main, to avoid inflation, by resorting to easy credit ; and from easy credit through ordinary means he has now had to escape into liberalising the conditions of the Reconstruction Finance Corporation.

President's Conferences with Experts

Here, too, the scepticism of some of our wiseacres has followed the President. It is now said that, owing to the fear that the scheme for expansion of credit may not be very successful, the markets are bound to come back and that the President's hands might be forced in regard to downright inflation. These talks may be discounted if only because of their prematureness. The fact of the matter is that the President is now considering seriously the monetary problem. On September 24, the President held a conference at the White House with Mr. Woodin, Secretary of the Treasury, and other monetary experts including the Federal Board chief. No statement has yet been issued as to what transpired, though one may easily guess that the principal talk of discussion is inflation. But later it was understood that no new inflation move was made at the Conference. It was also reported that inflation was not even mentioned and that President Roosevelt is against currency inflation. It is understood that the talks centred on the question of the release of frozen deposits and the expansion of credit. According to the Treasury officials, there is still 2,000 million dollars of deposits tied up in all types of banks, mostly state banks, which closed at the time of the bank holiday. It is expected that before long a plan will be announced for the speedy reopening of closed banks and the release of deposits, the basic principle of the plan being that the Government and the public shall subscribe to new capital in each case. Wall Street expects very shortly a statement from President Roosevelt clarifying the position of the dollar. The *Journal of Commerce* has ventured the opinion that there would be a deflation of 40 per cent. in the dollar by the end of the year. All this is based on the belief that the President is seriously considering the advisability of resorting to the experiment of a "commodity dollar" to raise and keep prices at a satisfactory level. The situation still continues obscure. The only statement that may be considered as throwing some light on it is that of Senator Bulkley who, on leaving the White House after a talk with President Roosevelt, expressed the opinion that inflation through the issue of Treasury notes within modest limits to-day would do no harm. For his part, he predicted, the lowering of the gold content of the dollar but declined to say by how much and when. Senator Bulkley has confirmed the reading of the situation expressed in these columns before that the President is watching his chance to do this rightly.

Slow flow of Credit

That it will be necessary for the President to act without further delay is clear from the prevalent banking situation. For there are still 2,575 banks which are closed and 231 saving banks operating under considerable restrictions. The Reconstruction Finance Corporation's advances to banks, railways and unemployed relief for August amounted to 111 million dollars against 137 million dollars in July. The weekly statement of the Federal Reserve Banks, which summarises conditions in the banks of 90 leading cities, also emphasises the unsatisfactory pace at which credit is flowing into industry.

Minor Pinpricks

The only development worth noting during the week is an increase in the minor pinpricks to the Recovery Administration. Besides the reports of strikes and sporadic disorder from all parts of the country, the National Association of Manufacturers has issued a statement inviting employers having "closed shop" contracts with a single union to violate the Recovery Act. The employers have also been asked to ween the workers away from joining trade unions by offering such inducements such as insurance benefits. At the same time, the New York Merchants' Association has appealed to President Roosevelt for an enforcement of the National Recovery and Farm Acts in such a way as not to endanger international trade, but rather to increase the power of foreign countries to purchase American products. How this objective can be realised at the present stage of the Recovery Administration is not clear. Perhaps a more serious matter is the decision of the Superior court of Los Angeles on the gold clause question. The court has just refused to set aside a gold clause in a private contract holding that the President and the Congress can do nothing contrary to a prior decision of the United States Supreme Court. There is also the threat of Mr. F. C. Campbell, a director of several British insurance companies, who has filed a suit in the court to test the legality of the President's order against the hoarding of gold. Mr. Campbell had placed in custody with the Chase National Bank gold bars worth 125 million dollars, which the Bank has declined to return on the ground that it is unlawful for it to do so. If the suit is pushed, the legality of the gold hoarding order will be tested. At the same time, Mr. Campbell has been indicted by a Federal Grand Jury on a charge of gold hoarding.

Trade Returns

The trade returns for August show an import surplus of 24 million dollars ; and it is expected that this would increase the agitation for higher tariffs under the provisions of the Recovery acts. The rise in imports largely reflects the higher prices in deliveries during the last few months on advance orders placed abroad in anticipation of inflation. The import interests will doubtless oppose vigorously such tariff increases.

Exports in August totalled $131,000,000, compared with $145,000,000 in July and $108,599,000 in August, 1932, while imports were $155,000,000, against $143,000,000 in July and $91,102,000 a year ago.

For the eight months of 1933 to date exports have totalled $944,527,00, compared with $1,055,441,000 in the corresponding period of 1932, while imports have amounted to $890,131,000, against $917,309,000 in 1932.

Thus for the eight-month period there is a favourable balance of $54,396,000.

Gold Movements

Exports of gold in August totalled $81,473,000, compared with $85,375,000 in July and $18,067,000

Air Mail Week

in August, 1932. Imports were $1,085,000, compared with $1,496,000 and $24,170,000 respectively. For the eight months, gold exports totalled $260,552,000, against $809,379,000 in the same period in 1932. Imports were $186,095,000, against $192,057,000.

Business reports continue to be indeterminate. The Guaranty Trust in its monthly *Survey* on the outlook sees bright prospects for business recovery over the longer period. It holds that the revival of industries producing capital goods is necessary to prosperity in the near future. The National Industrial Conference Board has issued its analysis of the August earnings, hours and employment. This shows, says Reuter, that reaIl earnings declined by 1.8 per cent. compared with those for July ; this, in spite of the fact that employment and earnings increased by 8.6 per cent. and 9.2 per cent. respectively. The 8.9 per cent. decline in hours of work and the rise of the cost of living more than offset the gains. The *Iron Age* announces that the current rate of steel activity at 41 per cent. is 2 per cent. below last week. The Journal adds that consumption is running much behind production and that manufacture for stock purposes is being stimulated by rising costs and prices. Electric power output figures show an increase of 9.9 per cent. over last year. Advance estimates of car-loadings indicate an increase over last year of slightly less than 9.5 per cent.

GERMANY

FINANCIAL REFORM TO HELP EXPORT TRADE

Germany is taking a number of steps to consolidate her economic position and facilitate the growth of her exports abroad. Besides enabling the Communes to relieve themselves of a part of the weight of their indebtedness by issuing a large conversion loan under the auspices of a special Conversion Association, to which the weaker communes will adhere, there are now measures for stimulating exports through regularising the means by which foreign importers of German goods will be enabled to obtain blocked reichsmarks and German bonds held abroad for the payment of their imports.

The inspiration for such measures is derived from the substantial increase in Germany's favourable trade balance shown in the figures for August compared with the previous month :

The value of the imports for August was Rm. 346,800,000, and the value of exports Rm. 412,500,000. The excess of exports was therefore Rm. 65,700,000.

Imports in July were Rm. 360,000,000 and exports Rm. 385,000,000, the favourable balance being Rm. 25,000,000.

The figures for August last year were :— Imports Rm. 331,000,000, and exports Rm. 428,000,000 marks, so that the export surplus was Rm. 97,000,000.

The most important of the steps now taken is the application made by Dr. Schacht, the President of the Reichsbank, to the Bank for International Settlement for permission to alter the status of the Bank in order that the bank might legally be entitled to carry on open market operations such as are being performed from day to day by the Central Banks of England, France and U.S.A.

It will be remembered that the Bank for International Settlements imposed a Committee of Control on the Reichsbank in order that its interests in the general soundness of the currency and financial position in Germany might be preserved. The German Government are now, therefore, obliged to obtain the permission of the Bank for International Settlements before they could proceed with the necessary legislation.

All that Dr. Schacht wants at the moment is that the Reichsbank should have the means of esablishing that close relation between the money and the capital markets, without which no central bank can discharge its functions efficiently. As the views of Dr. Schacht on the question of inflation are well known, little fear is entertained either at home or abroad that the new powers sought by the Reichsbank would be utilised at a later stage for effecting inflation such as would affect the stability of the German currency.

It would, of course, be open to the Reichsbank under the new regulations to purchase giltedge securities and treat them as cover for note issue. In these transactions little cash would be needed, as it would be open to the Reichsbank to make a slight increase in the note issue and finance the transactions therewith. But so long as a man of sound views on currency like Dr. Schacht is at the helm of affairs, there is no real danger of inflation ; and on this score alone it is believed that the Bank for International Settlements will have no objection and create no difficulty in the way of Dr. Schacht effecting the desired change in the powers of the Reichsbank.

The next step that Germany has now taken is to classify the various kinds of blocked reichsmarks and determining the lines on which German exporters would be able to have such blocked reichsmarks released as payment for their exports. The position in this regard has been recently explained by Messrs. Leopold Joseph and Sons, foreign bankers. The Company states that a few months ago the German authorities, in order to increase the volume of their exports and thus obtain foreign exchange balances, have to a certain extent relaxed the very stringent regulations governing the freeing of frozen balances. Those kind of blocked reichsmarks usually liberated in order to pay the exchange of goods from Germany are :

(1) Altguthaben.
(2) Kreditreichsmarks.
(3) Registered Reichsmarks.

The method to be adopted in this instance is that the foreign importer should write a letter to his supplier in Germany making out a case for the special facilities that he seeks in order to be able to import the German goods. Such special reasons might well be the undercutting of foreign competitors of Germany, the depreciation of the currency of the country which seeks to import German goods etc. On receipt of the letter the German supplier might apply to what is known as Devisenwirtschaftungsstelle. The grant of such applications is entirely in the discretion of the competent German authorities. And it may be taken for granted that in making their orders on such applications they would be governed by whether the goods sought by the foreign importer are wholly German or partial, and, if the latter, to what extent.

The following example offered by Messrs. Leopold Joseph and Sons will be found to clarify the position.

"In order to make the procedure clearer to you, we give an example of how an actual transaction would go through . Supposing your supplier in Germany were to receive a permit to accept from you Kreditreichsmarks for an amount of 50 per cent. of his total invoice amount of Rm. 100,000,000, you would have to purchase :—

(*a*) Ordinary free Reichsmarks 50,000,00
(*b*) Kreditreichsmarks ... 50,000.00

(*Continued on page* 913)

THE INDIAN INSURANCE YEAR BOOK

The Indian Insurance Year-Book, 1932, is like most official Statistical Publications, a belated production with figures referring to an even earlier period than what it professes to cover. The 1932 Year-Book published in the second half of 1933 has figures which in most cases, do not reach beyond 1931. In this respect, India affords a singular contrast to the U. S. A., England and other western countries, where statistics are collected and presented to the public in neat tabular statements within a few months after the year closes.

This inordinate delay in the publication of insurance statistics is due mainly to two defects, namely, the delay of the individual insurance companies in submitting their accounts, etc., to the Government, and the lack of an efficient machinery, government or private, to collect and publish quickly such statistics. The legislation in this respect in India is not rigid, but rather weak and loose. In England every assurance company is required to submit to the Board of Trade four copies of duly signed revenue accounts, balance sheet, etc., within six months after the year closes. This rule is strictly enforced; and only in exceptional cases, an extension not exceeding three months is given, after the Board of Trade is fully satisfied as to the cause of the delay. If the accounts are not submitted within this the policyholders and the shareholders are given permission to bring proceedings for winding up the company. Thus the submission of the accounts within the proper time is enforced, as no company would like winding up proceedings to be brought against it. Whereas in India section 11 of the Indian Life Assurance Companies Act of 1912 is so vague and indefinite that it is almost impossible to collect the accounts of the companies within a reasonable time. This Section prescribes a time of six months in some cases and one year in some other cases with a still further proviso that a longer period (indefinite in length) may be allowed by the Governor-General-in-Council if a proper case for extension of time is made to them. The law being so lenient, it is no wonder that many Indian insurance companies take advantage of this and delay as much as possible the despatch of their accounts. This leniency further helps some of the Indian Life offices, who scramble for higher and higher New Business, to extend their financial year to a great extent, thereby making inordinate delay in submitting their reports and accounts. Such offices forget that it is not the new business alone that makes them great but that there are other important factors, such as a sufficient life fund, absolutely safe, sound and profitable investment of its assets, low expense ratio, sound selection of lives resulting in favourable mortality experience, economic procuration of sound new business (without much lapses).

One other obstacle in the way of prompt publication of statistics, is that Indian Insurance companies close their accounts in different months (in almost all the twelve months of the year). This difficulty was felt even by the Board of Trade in England; and they immediately legislated that all companies should close on the 31st December of the year, five years time being given for companies to come into line. Now all English offices close their accounts on 31st December. It is better that Indian Insurance Companies are also made to close their accounts uniformly on the last day of the calender year.

Coming to the report of the Government Actuary, we find that the total number of companies working under the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928, were 282 out of which 136 companies are Indian and 146 are constituted outside India. Most of the Indian Companies (103) transacted only life business, 20 are composite offices and 13 did general insurance business only. On the other hand, most of the foreign companies (122) are doing insurance business other than life, 10 carry on life business only and 14 are doing composite business. Among the foreign insurance companies 71 are British, 31 are constituted in the British Empire, 18 are Continental, 12 American, 9 Japanese and 5 Javanese. The Government actuary says that many new life insurance companies are being constituted year after year, many of them spending their whole capital in the initial organisation and preliminary expenses. The Government Actuary has uttered a note of warning against starting new concerns in insurance, particularly against the mushroom growths. As we have dealt with this evil at length on more than one occasion in these columns this need not detain us. We shall be content with urging here that the responsibilities of the Government in this regard extend far beyond this mild protest against an evil which, assuredly, does not spring from ignorance.

The total new life assurance business effected in India during the year 1931 amounted to 125,000 policies assuring a sum of Rs. 26⅜ crores as against 145,000 policies and Rs. 27½ crores in 1930. The fall of about Rs. 83 lakhs may be due to the economic depression. Out of this 26⅜ crores, the share of the Indian companies was 17¾ crores having a premium income of 90 lakhs. It is noteworthy that the share of the new business of Indian companies is gradually increasing year after year, the year under review showing an appreciation of Rs. 1½ crores. The total life assurance business effected in India at the end of 1931 amounted to 714,000 policies assuring a total sum of Rs. 168 crores and having a premium income of 8¼ crores. The corresponding figures at the end of 1930 were 717,000 policies and Rs. 154 crores and Rs. 8 crores. Of this the share of Indian companies was 502 thousand policies assuring a sum of Rs. 94 crores and having a premium income of 4½ crores. The total annuity business remaining in force at the end of 1931 was Rs. 3⅜ lakhs per annum of which the share of the Indian companies was Rs.1½ lakhs per annum. The fact that the annuity business in India forms such a small proportion of the total life insurance business (unlike in many western countries like England, U. S. A.,) shows that it is not quite popular among the Indian insuring public. The one important reason for this is that Indian lives in general are much more short-lived than in those countries and as the rates of premium are not proportionately smaller, the business has not found favour with the Indian public.

Out of a total of 123 Indian life offices, 32 are mutual companies, the rest being proprietory. It is gratifying to note that Indian life offices are gradually finding more and more favour with the Indian insuring public. The following table shows the amount of new Business and Total Business in Force of all the Indian life offices, during the past ten years.

Insurance Section:

Year.	New Business Written during the year.	(In lakhs of Rs.) Total business in force at the end of the year.
1922 ...	5,64	37,00
1923 ...	5,85	39,00
1924 ...	6,89	42,00
1925 ...	8,15	47,00
1926 ...	10,35	53,00
1927 ...	12,77	60,00
1928 ...	15,41	71,00
1929 ...	17,29	82,00
1930 ...	16,50	89,00
1931 ...	17,76	98,00

The Government Actuary reports that nearly 40 per cent. of the new business of 1931 amounting to Rs. 7¾ crores lapsed during that year itself. It is really regrettable to note such a high lapse ratio, which, to some extent, shows that the business affected was not quite sound but rather forced. The lack of insurance education among the agents so as to explain and properly convince the prospects, is the main reason of this high lapse ratio. Besides the acute economic depression and the consequent suffering of the public constitute another reason for the big lapses. The actuary further says that many insurance companies conduct their business at a dangerously high cost. Again it appears that some of the expensively-managed companies had incurred big expenses which are not yet written through the revenue account as outgo but yet shown as capital outlay amongst assets. Of course, this is justifiable in the case of new companies and for the first few years only.

The net income of all Indian life offices during the year 1931 was Rs. 5¾ crores including the premium income of Rs. 4½ crores. The life assurance funds increased by Rs. 2 crores during the year to Rs. 22½ crores. The average rate of interest earned during the year was a little less than 5½ per cent. An interesting table showing the contributions in percentage of various items of income and outgo during the past 20 years is also given. During the year 1931, premium income was 79-6 per cent. of the total income, interest, dividends rents etc., accounted for 19.3 per cent. and other receipts 1.1 per cent. In the outgo, claims by death was 16.5 per cent; Maturity claims was 15.2 per cent., Management expenses was 22.7 per cent; dividends to shareholders 8.3 per cent. additions to life funds was 32.6 per cent. and miscellaneous was 4.7 per cent. It can be observed that management expenses have increased during recent years considerably when compared with the figures of the earlier years. This may perhaps be due to the curse of the Managing Agency system, which of late has spread its contagion even to Insurance business.

Coming to the general insurance business, we find that the premium income of all the companies in insurance business other than life during the year 1931 was 2½ crores distributed as follows: fire Rs. 1,28 lakhs, marine Rs. 43 lakhs, and miscellaneous general insurance Rs. 77 lakhs. The share of the Indian General insurance companies was Rs. 28 lakhs from fire, Rs. 7 lakhs from marine, and Rs. 24 lakhs from miscellaneous insurances. Thus nearly 4/5ths of the total premium income was shared by foreign companies. It may also be mentioned that some of the Indian general insurance companies doing business outside India have received a premium income of about Rs. 1 crore (Rs. 55 lakhs from fire Rs. 25 lakhs from marine and Rs. 16 lakhs from miscellaneous) from outside India.

The total assets of Indian insurance companies amount to Rs. 29 crores, Rs. 21 crores of which are invested in stock exchange securities, mortgages policy loans etc. account for Rs. 4 crores and house properties etc. account for Rs. 1½ crores. The total assets in India of non-Indian companies amount to Rs. 37 3/5 crores of which Rs. 32 crores belong to companies constituted in the United Kingdom and Rs. 5½ crores belong to companies constituted in British Empire. The year book gives several useful and interesting statistical compilations.

BANK OF BARODA,
LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

CAPITAL SUBSCRIBED ... Rs. 60,00,000
CAPITAL CALLED-UP ... Rs. 30,00,000
RESERVE FUND NOW IS ... Rs. 20,75,000

Head Office:—Mandvi, BARODA.
Branches:—Ahmedabad, Bombay, Surat, Navsari, Karjan, Dabhoi, Mehsana, Patan, Petlad, Port Okha, Kalol, Kadi Sidhpur, Bhavnagar, Amreli and Dwarka.
London Agents:—The Eastern Bank, Ltd.
Current Accounts:—Fixed, Short Savings Bank and Savings Bank Deposits received on terms which may be ascertained on application.
Loans, Overdrafts and Cash Credits.
The Bank grants accommodation on terms to be arranged against approved securities.

C. E. RANDLE,
General Manager.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

BANKING AND CURRENCY REFORM IN AMERICA

A PEEP INTO RECENT CHANGES

(Continued from the previous issue)

External Value of the Dollar

We turn now to the subject of the monetary standard and the external valuation of the dollar. The first step in the separation of the dollar from gold was taken on March 6, contemporaneously with the declaration of the national banking holiday. The President's proclamation prohibited until March 9 all exports and earmarkings of gold and dealings in foreign exchange. This, however, was merely a part of the general suspension of all financial business, and the parting of the ways was reached only when provision was made for the re-opening of the banks. On March 10 a further order was issued prolonging indefinitely the prohibition of gold payments and exports, whether in the form of coin, bullion or gold certificates, except such as might be licensed by the Secretary of the Treasury. At the same time, purchases of foreign exchange were permitted, but were specifically limited to amounts needed for normal business payments, for travelling and personal requirements, and for fulfilment of contracts entered into before March 6.

It will be observed that the foreign exchange restrictions were similar to those imposed on residents in Great Britain from September, 1931 to March, 1932. The method of enforcement, however, was different, and in practice there appears to be very little obstruction of foreign exchange business. We gather that the restrictions are, and have been almost throughout, very broadly interpreted. Theoretically, all dealings in New York are referred to the "supervisor" appointed by the New York Federal Reserve Bank, but in practice the market is almost free except for requests of exceptional size or nature. No obstacles are placed in the way of removal of foreign-owned funds, and scarcely any in the way of purchases of foreign currencies by American nationals.

For a time following these steps, the significance of which was difficult to estimate, quotations for the dollar in terms of gold currencies remained very close to parity. The fact that the United States was a strong creditor country, with a minimum of foreign short-term claims against her; the probable continued existence of a surplus on her current balance of payments; the feeling that the restriction of gold payments was only temporary, and would prove to be more in the nature of a safeguard than a measure for practical application; all contributed to the maintenance of the external value of the dollar. Actually, a few small gold shipments, other than those representing transfers of earmarked metal, were allowed under licence, and this fact lent support to the supposition that the gold standard was intended to be maintained, at any rate in a modified form.

This supposition, however, was shaken during ensuing weeks, notwithstanding measures taken to concentrate the country's gold stocks in the central banks and the Treasury. A new order, on April 20, left no doubt as to the intentions for the Administration, and immediately cut the dollar adrift from its gold parity. The order covered dealings in both gold and foreign exchange. It prohibited indefinitely the earmarking and export of gold except under licence, which might be granted only in respect of stocks earmarked for foreign governments or central banks or the Bank for International Settlements, gold imported for re-export, gold required for contracts already entered into, or for transactions expressly approved by the President. As to foreign exchange, the earlier restrictions were upheld, while the Secretary of the Treasury was authorized to regulate or prohibit any exchange transactions, transfers to foreign branches or banks, and the export of United States currency.

It will be observed that this order, while more definite and clear in some respects than its predecessors, added little to them. But the mere fact of their re-affirmation, along with indications becoming daily more clear that the President contemplated a scheme of deliberate internal depreciation of the dollar, led to immediate and rapid external depreciation. Within two days the quotation for dollars in terms of francs was eight per cent below par, and subsequently the wide movements, sometimes covering as much as eight per cent between one day and another, carried the dollar down to about 70 per cent of its gold value.

The decline has been due largely, if not mainly, to speculation and capital sales of dollars following upon or in anticipation of steps taken or expected in pursuance of internal monetary policy. In part it has been due to the rise in dollar prices, far exceeding the general upward movement in sterling prices, for a number of staple commodities, the excess being due largely to American speculation in commodities. Again, it may be attributable in a degree to a tendency for American exporters to leave abroad the proceeds of their sales. For this and other reasons the market has been narrow, and speculative and capital transactions have consequently had far greater effect upon rates than in more settled conditions. But the fact that they have been permitted indicates how little use has been made of the Government's powers of restricting exchange dealings. This is in conformity with the President's evident decision to concern himself almost entirely with the internal value of the dollar, leaving the external valuation to go where it will. Nevertheless, the powers of restriction are available to place the check upon speculative and capital dealings if and when it may be deemed desirable. Again in agreement with this policy, there seems little evidence of any deliberate American official efforts, similar to those frequently made by our own Exchange Equalisation Account, to "iron out" wide and rapid fluctuations in rates.

The Monetary Standard

The order of April 20 might be regarded as the first, but only the first, definite step away from gold, for on May 12 the President's signing of the Farm Relief Act threw on the lap of the gods the whole question of the future standard of the dollar, and made it at least open to question whether the United States will ever return to a simple gold standard. Apart altogether from the "inflation powers" already mentioned, one clause related directly to the question of the standard. It empowered the President, in the first place, to reduce the gold content of the dollar by any fraction up to one-half; this, then, envisaged the possibility of devaluation, either in concert with other countries or independently, while still suggesting ultimate reversion to a gold standard. But the same clause also gave him power to fix the relative weights of gold and silver dollars and to provide for unlimited coinage of the two metals at the ratio thus fixed; this clearly gives an opening for a re-institution of a full bi-metallic standard. This clause of the Act, moreover, is unlimited in point of *time, and the door is thus left open for indefinite* operation of a non-metallic monetary system based neither upon gold nor silver in any real and practical sense. If, however, a gold standard is to be restored, the extent of possible reflation apart from the world trend of prices is limited by the restriction on the President's powers of devaluation. In practice, then, his powers to determine the future monetary standard are almost unlimited as to both kind and time. It is not surprising, therefore, that speculation has taken a much fiermer grip on the dollar than it has taken on the pound at any time within the past year.

One further measure calls for mention. As everyone knows, the vast bulk of fixed debt incured in the United States, whether by Americans or foreigners, was expressed in gold dollars. In our issue of February-March we gave examples of the varied phrasing of the relevant provision, but they were all interpreted as having the same effect, namely that principal and interest were to be paid in dollars having a prescribed gold content, or in other forms of dollars taken at their gold valuation. The insertion of this provision had become habitual since the experiences arising from the Civil War in the 'sixties of last century, and the definite separation of the dollar from gold, along with the withdrawal of gold from circulation, raised in an acute form the question whether dollar payments due in respect of such debts should be increased, and if so by *how much (no easy question this)*, to allow for the depreciation of the dollar in relation to gold. In order to clarify and regularize the position the Government took the equitable course of declaring all such clauses void. This was done by a joint resolution of both Houses of Congress, on June 5, nullifying the "gold clause" in all existing and future contracts, and approving payments in United States legal tender as full discharge of interest and principal obligations. In consequence, with the exception of a few foreign loans containing the gold clause, the debtors on which have elected of their own free will to observe it, all debts on which payments are being made are now served in "paper" dollars. Before the joint resolution some authorities doubted the power of Congress to sweep away the gold clause, for the terms of the constitution of the

Topical Extracts :

United States were held to render any such act unconstitutional. The President, however, had already taken opinions on the question, and had evidently satisfied himself as to the validity of the proposed course of action. Still, the matter cannot be regarded as finally settled, for, although one or two favourable judgments have been given in minor courts, the final authority, the Supreme Court of the United States, has not yet had an opportunity of giving a decision. It may in fact never have that opportunity, and in any event the occasion cannot arise until the wheels of American justice grind slowly to that point.

The Position regarding Gold

Our narrative of the departure of the United States from the gold standard will have revealed many differences from Great Britain's experience and methods. One of the most interesting of them, however, may have escaped notice, since we have not directly dealt with the point. When Great Britain left the gold standard no restrictions were placed on gold exports or imports, nor have any been imposed since. One result is that in this country, which produces little or no gold, a market has been maintained in the metal at prices determined by the full play of competition. Vast quantities of gold have come to London from South Africa, India and elsewhere for disposal; much of it has passed into the possession of foreign central banks; our own monetary authorities have bought large quantities; and foreigners have acquired millions of pounds' worth for hoarding, either in this country or their own. All these competing buyers have paid the market price of the day, which is far removed from the par price in pounds. Until America left the gold standard the market price was determined mainly by the exchange rate on New York, which was accepted as measuring the depreciation of the pound in relation to gold; more recently the rate on Paris has been taken as the standard ; but the price actually paid has often—more often than not in later months— been several pence above the figure determined by the exchange rates on gold standard countries, owing to the keen demand for purposes of personal hoarding. Gold is no longer a medium for the settlement of uncovered residua in current international payments ; it is a commodity in strong request for the sake of its supposed security against depreciation.

In America the position is quite different. Although the United States is the world's third largest producer of gold, with an annual output of about two million ounces ; authough she is still the world's largest holder of gold ; although, moreover, her stock would be further increased by devaluation ; no free gold market exists, and producers still sell their output to the Treasury at the par price, notwithstanding the depreciation of the dollar in relation to gold. Similarly, jewellers and others requiring gold for industrial purposes are permitted to secure their requirements from the Treasury as before, again at the par price.

They are obvious difficulties, not encountered here, in the way of establishing a free gold market in the United States. Perhaps one of the most powerful arises from the consideration that the American public has been ordered, under threat of heavy penalties, to surrender any gold still in its possession, over and above merely nominal holdings. To the extent it has not done so, the establishment of a market price well above the par value might regard the delinquents even while the law threatened them with punishment, and would place patriotism at a discount. This objection operates, incidentally, with equal force against simple and early devaluation. Further, the argument might run that it would be unfair for the gold producer to obtain more for his gold than was paid to the member of the public who acquire gold perfectly legitimately before March 1933 and surrendered it in accordance with instructions. This is one of the complications following from the maintenance of free circulation as a qualification of the gold standard, and it might operate with equal force if France, for example, were compelled to abandon the gold standard.

Yet, despite these and other objections, it is difficult to see how official intervention in the exchange market could operate fully, without free dealings in gold, in pursuance of any definite policy regarding the external value of the dollar. The operations of our Exchange Equalisation Account have been greatly facilitated by the existence of a free gold market. For several recent months, for example, it proved difficult to prevent a strong appreciation of sterling in relation to gold. We will not enter into the reasons for this upward pressure on the pound, for they are a matter of controversy which would require extensive treatment. If it become necessary to support the pound it would be possible to sell in the open market gold already acquired by our monetary authorities, and thus to maintain the value of sterling at the desired level even though all our reserves of foreign currencies might have been exhausted. It seems unlikely, therefore, that any machinery of "control" similar to our own will be set up in America without the establishment of a free gold market cheek by jowl with central banks closed to the sale of gold.

American Exchange Policy

The difficulties in the way of this step may be in part responsible for the President's disclaimer of any immediate interest in the external valuation of the dollar. The main element in this attitude, however, is clearly his unwillingness to take any steps which might hamper in the slightest degree his complete freedom of action in respect of the internal purchasing power of the dollar. In order to complete our story we must refer to his two principal and latest utterances on this matter. The first was issued on July 3 as a personal commentary on the proposed international declaration, drawn up at the World Conference, regarding the general principles of monetary policy appropriate to both gold and non-gold standard countries. In it the President condemned attempts to achieve "a temporary probably an artificial stability in foreign exchange" so long as much larger and more urgent matters were claiming immediate attention. He went on to make it perfectly clear that while America was engaged in a great experiment to secure an equitable and then stable internal value of the dollar the question of the external valuation of the dollar must be left in a definitely inferior position. "The sound internal economic system of a nation is a greater factor in its well-being than the price of its currency in changing terms of the currencies of other nations". The second statement, two days later, was issued by the American delegation to the World Conference, but presumably was the fruit of the President's further intervention in the discussion. It reiterated and developed the position taken up in the first, drew a contrast between the experiences in depreciation of the dollar and of European currencies, and called attention to points of contact between American and British declarations of internal monetary policy.

We wil permit ourselves, in conclusion, only two comments on these statements. First, we regard it as one of the major benefits of the crisis—for even a major crisis has some good results—that a statesman of President Roosevelt's standing and power should have brought the world nearer to a true sense of proportion in the matter of monetary stability. As we pointed out a month ago, there are two sorts of stability, in internal purchasing power over commodities and services, and in external purchasing power over other currency units. Notwithstanding the appalling experiences of recent years and their obvious association with internal instability, it is still the habit to think in terms of the second, to the almost total exclusion of the first. Yet, if the depression has taught us anything it is just this: that our neglect of the first has cost not only an incalculable direct loss in terms of economic welfare, but indirectly the loss of the benefits to be derived from the second. The President's statement is therefore to be warmly welcomed, particularly as the price paid for it, in the abandonment of a formula which might have had little practical value and possibly injurious psychological effects, was so small.

Our second comment is related to practical expediency. The dollar, in respect of its external valuation, has become a prey to speculation ; and this is true to a smaller extent of its internal value as well. The two are seemingly closely associated, for it may be supposed that inducements of exchange speculation operate also to stimulate commodity speculation, and success in one encourages the hope of succes in the other. It follows that suppression or limitation of exchange speculation would probably serve to check speculation in commodities and in stock exchange securities—both now recognised as danger spots in the American situation. If this be so, it is doubtful whether the course of the dollar in the exchange market can be altogether ignored with safety. At all events, it is evidently to the world's benefit to watch the American experiment not only closely but sympathetically, and to offer every possible assistance that can be given with the limits of diverse beliefs and interests. There is so much common interest and belief that the field for such assistance is large ; the reward is the prospect of a share in restored and assured prosperity ; it will be unfairly won if it comes as "unearned increment" ; it will be bitterly lost if lost through shortsightedness and practical shortcomings in the attitude of other countries towards the President's plans.

(Mindland Bank Review).

STATISTICAL INFORMATION

INDIA'S BALANCE OF TRADE

During the five months ended August, 1933, the value of the imports decreased, as compared with the corresponding period of 1932, by Rs. 13 crores or 21 per cent. and amounted to Rs. 47 crores and the total exports, including re-exports, rose by Rs. 11 crores or 23 per cent. to Rs. 61 crores. The exports of Indian merchandise showed an increase of Rs. 11 crores or 24 per cent. and the re-exports also showed an increase of Rs. 6 lakhs, or 5 per cent. The grand total of imports, exports and re-exports amounted to Rs. 108 crores as against Rs. 109 crores, a decrease of Rs. 1 crore or 1 per cent.

Imports of treasure (private and Government) decreased by Rs. 94 lakhs to Rs. 71 lakhs. Gold bullion increased by Rs. 2 lakhs to Rs. 33 lakhs, while sovereigns and other British gold coin decreased by Rs. 6 lakhs to Rs. 13 lakhs, and other coined gold fell by Rs. 8,000 to Rs. 1,02,000. The value of silver imported decreased by Rs. 89 lakhs to Rs. 22 lakhs, and of currency notes by Rs. 1 lakh to nearly Rs. 2 lakhs. Exports of treasure increased by Rs. 2,87 lakhs to Rs. 27,18 lakhs. Exports of gold alone amounted to Rs. 22,46 lakhs as against Rs. 23,10 lakhs in 1932.

India's visible balance of trade in merchandise and treasure during the five months, April to August, 1931, 1932 and 1933, is shown in the following table. The figures are arrived at by combining the balances of transactions in (1) private merchandise and (2) treasure (private account). The balance of remittances of funds is also shown with details at the end of this table. In these balances the sign plus (+) indicates net export and minus (−) net import

	Five Months Apl. to Aug. 1931 Rs. (lakhs)	1932 Rs. (lakhs)	1933 Rs. (lakhs)
Exports of Indian merchandise (private)	+63,93	+48,35	+59,74
Re-exports of Foreign merchandise (private)	+2,04	+1,24	+1,30
Imports of Foreign merchandise (private) (a)	−56,10	−59,38	−46,59
Balance of trade in merchandise (private)	+9,87	−9,79	+14,45
Gold (private)*	+42	+22,59	+21,99

Interest Drafts on India in respect of Government of India Securities ...	−16	−16	−20
Balance of remittances of funds	+9,88	−5,67	−23

(a) Exclusive of the value of Railway materials (Rs. 11 lakhs, Rs. 12 lakhs and Rs. 11 lakhs in the five months April to August, 1931, 1932 and 1933, respectively), imported direct by State Railways working under Company management which was not paid for in the ordinary way and not, therefore, taken into account in arriving at the balance of trade.

(b) This head includes, in addition to Council Bills, (1) Sterling purchases in India and (2) payments in India to Local Bodies, etc., against proceeds of sterling loans floated by them in London and taken over by the Secretaryq of State.

*These exclude transactions which do not enter into the balance of trade.

SHIPPING

In the month of August, 1933, there were 206† arrivals and 265† sailings with cargoes in and from India, as against 185 and 231 respectively in August, 1932.

†The provincial details are as follows:—Bengal 12, Bombay 46, Sind 20, Madras 91, and Burma 37.

‡The provincial details are as follows:—Bengal 37, Bombay 47, Sind 28, Madras 102, and Burma 51.

The tonnage (net register tonnage) of vessels entered with cargoes at ports in British India from foreign countries and British Possessions during the five months ended August 1933, amounted to 2,923,977 and the tonnage (net register tonnage) cleared to 3,150,108 as against 2,792,187 tons entered and 2,911,821 tons cleared during the corresponding periods of 1932.

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned railways for the week ending 16th September, 1933 (24th week), amount to Rs. 146 lakhs, Rs. 3 lakhs MORE than the figures for the last week and Rs. 3 lakhs LESS than the figures for the corresponding week of the previous year and Rs. 10 lakhs MORE than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 16th September, 1933, amount to Rs. 37.51 crores or Rs. 77 lakhs MORE than the figures for the corresponding period of the previous year and Rs. 36 lakhs LESS than the corresponding period of 1931-32.

A comparison with the figures of the previous week for the principal State-owned railways shows INCREASES in the approximate gross earnings of all railways except the B. N., B.B. & C.I. and N.W. A comparison with the figures of the corresponding week of 1932 shows DECREASES in the approximate gross earnings of the B.B. & C.I., G.I.P., M. & S.M., N.W. and Tirhoot and Lucknow-Bareilly.

During the week ending 16th September, 1933, there were loaded on the broad gauge 69,567 wagons, being 4,407 MORE than in the corresponding week of the previous year, or an increase of 6.72 per cent. On the metre gauge there were loaded 44,010 wagons, being 5,234 MORE than in the corresponding week of the previous year, or an increase of 13.5 per cent.

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned railways from 1st April to 31st July, 1933, as compared with the actuals of the corresponding period of last year:—

INDIA'S FOREIGN TRADE IN AUGUST

Exports of Indian produce and manufactures in August were valued at Rs. 14,02 lakhs, an increase of 15.2 per cent. compared with July and 40.3 per cent. compared with August, 1932. Rice shipments increased from 113,000 tons in August, 1932, to 159,000 tons. Exports of tea dropped from 44 million lbs. to 43 million lbs. Raw cotton shipments were higher by 15,600 tons while those of raw jute rose from 27,200 tons to 48,100 tons. Shipments of oil seeds increased from 42,000 tons to 145,000 tons. Exports of raw hides and skins and wool also improved. The value of imports into India of private merchandise in August totalled Rs. 988 lakhs, an increase of 13.6 per cent. compared with July, but a decrease of 11.2 per cent. compared with August, 1932. Imports of sugar continued to decline, but those of betelnuts rose from 74,000 cwts. to 95,000 cwts. Arrivals of raw tobacco increased from 31,000 lbs. to 543,000 lbs. Imports of petroleum advanced from 76,000 gallons to 737,000 gallons. Under cotton piecegoods imports of greys fell from 33 million yards to 24 million yards and those of white and coloured goods from 43 and

53 million yards to 16 and 23 million yards. For the first five months of the current fiscal year, exports of Indian produce showed an increase of 23.6 per cent. in value, while the value of imports was less by 21.5 per cent.

FOREIGN TRADE OF BOMBAY IN AUGUST

Exports of Indian produce from Bombay in August were valued at Rs. 2.44 crores, showing a rise of Rs. 1.12 crores or nearly 85 per cent. over the figures for August, 1932; the fall compared with August, 1931, was 21 per cent. The rise in exports was mainly due to increased shipments of seeds, which were larger by 44,522 tons and of raw cotton, raw wool, hides and skins, and myrabolams. Imports of merchandise into Bombay during August totalled Rs. 3.68 crores, showing a fall of just over Rs. 15 lakhs or 4 per cent. compared with August, 1932, but a rise of 5 per cent. compared with August, 1931. The decline in imports is chiefly attributable to smaller arrivals of cotton piecegoods, which were less by over 8¼ million yards. There were also smaller arrivals of cotton twist and yarn, artificial silk piecegoods and kerosene oil. Imports of raw cotton increased by 2,705 tons and imports of machinery and millwork and dyes were also larger in value. For the first five months of the current financial year, there has been a falling of 27 per cent. in imports, but an improvement of nearly 21 per cent. in the value of exports compared with the first five months of 1932-33. Compared with the first five months of 1931-32, exports have increased in value by 79 per cent.

IMPORTS OF CLOTH INTO INDIA

There was a fall in the imports of both cotton yarn and cotton piecegoods into India during July as compared with the previous month, says the Secretary of Bombay Mill-owners' Association in his monthly circular. The total imports of cotton yarn fell from 4.2 million lbs. in June to 3 million lbs. in July. Of this total, Japan was responsible for sending 1.5 million lbs., China 745,000 lbs. and the United Kingdom 700,000 lbs. The sendings from Japan consisted mostly of two-folds mercerised yarn and 31-40s counts grey yarn.

The total of cotton piecegoods imported during July amounted to 66.3 million yards as compared with 70.7 million yards in June. The shares of Bengal and Bombay practically remained constant at 20 and 22½ million yards respectively, while there was a substantial fall in the taking of Sind which fell from 13.1 to 8 million yards.

The imports of artificial silk piecegoods during the month were 4.8 million yards as compared with 5.2 million yards in June and 6 million yards in May. Imports from Japan totalled 4.5 million yards as against 4.8 million yards in June, and consisted of 4 million yards of piecegoods made entirely of artificial silk and 406,000 yards of piecegoods made of cotton and artificial silk, the latter showing a tendency to rise. There was a very slight falling off in the total imports of cotton yarn, but there was some increase in the imports of cottin piecegoods into Bombay during July. The total imports of cotton yarn were 842,000 lbs. as compared with 860,000 lbs. in June. The total imports of cotton piecegoods at 22.6 million yards were higher by 400,000 yards as compared with the imports for June.

There was a slight fall in the imports of artificial silk piecegoods from 4 million yards in June to 3.7 million yards during the month, of which Japan sent 3.5 million yards. Italy came next with only 86,000 yards.

CALCUTTA PORT FINANCES

The quantity of the sea-borne traffic of the Port of Calcutta during the financial year 1932-333 was 7,492,196 tons, which was 436,228 tons less than the quantity during 1931-32 and 3,378,970 tons less than during 1929-30, the last year of comparative prosperity, states the annual administration report of the Commissioners for the Port of Calcutta. The total nett tonnage of shipping entering the Port during the year was 3,828,983 as compared with 4,189,742 in 1931-32 and 4,985,999 in 1929-30.

The Commissioners' income, apart from their receipts from lands and buildings, is practically dependent upon the quantity of goods and amount of shipping using the Port, and it fell from Rs. 2,67,01,863 received in 1931-32 to Rs. 2,46,36,680. The income during 1929-30 amounted to Rs. 3,43,98,110 and surcharges which produced Rs. 9,81,965 during 1932-33 and Rs 10,90,166 during 1931-32, were not then in force.

In addition to the large saving of about Rs. 19 lakhs a considerable portion of which was due to fuller effect being obtained from the economies introduced in 1931, the net expenditure under "Interest on debt and sinking fund charges" was reduced by about Rs. 35½ lakhs owinxg to the great appreciation which occurred in the Sinking Fund.

The cost of labour decreased as the result of decreased traffic; and the total expenditure under all heads amounted only to Rs. 2,53,65,300 as compared with Rs. 3,13,44,354 in 1931-32.

The deficit on the year's working was Rs. 7,28,619 and to cover this an appropriation of Rs. 7,50,000 was made from the Revenue Reserve Fund. This Fund, which had a balance of Rs. 53,35,483 on April 1, 1932, also benefitted from the appreciation in the value of securities, and it amounted to Rs. 52,63,692 at the close of the year.

The general financial pisition at the end of the year was therefore slightly better than that forecast when the Commissioners addressed Government on the subject. It was then expressed that the year would end with a deficit of Rs. 8 lakhs and the Revenue Reserve Fund would be reduced to Rs. 45 lakhs.

When the Commissioners reviewed the financial position of the Trust there was no sign of any improvement in traffic and unless further temporary relief was obtained from appreciation of securities, they were faced with the prospect of a deficit at the end of 1933-34, which would exceed the total amount in the Reserve Fund.

RANGOON PORT FINANCES

The annual report of the Commissioners for the Port of Rangoon for the year 1932-33 states that as regards the revenue account of the year's working resulted in an excess of expenditure over income amounting to Rs. 1,93,543. Compared with the previous year, income shows a decrease of Rs. 6,84,919 and expenditure a decrease of Rs. 7,77,660.

The balance-sheet shows total liabilities, in respect of loans raised for capital expenditure, of Rs. 5,66,10,925 at March 31, 1933. The loan from the Government of Burma is being repaid by equated payments of principal and interest, and the debenture loans will be repaid from the sinking funds established for that purpose. An examination of these funds at March 31, 1933, showed surpluses of Rs. 36,53,707 in the funds for the redemption of rupee loans and £146,359 in the funds for the redemption of the sterling loan. With the Government's approval, a portion of these surplnses is being utilised for the repayment, on August 18, 1933, of the balance, Rs 31,82,259, of the loan from the Government of Burma.

The seaborne trade of Rangoon showed a decrease of approximately 10 per cent. compared with last year, and is the lowest recorded since 1924-25.

During the year 259,365 passengers by sea landed at, and 232,444 embarked from, the Commissioners' wharves and jetties, as compared with 248,467 and 298,072 respectively for the previous year.

INDUSTRIAL DISPUTES IN BRITISH INDIA

The statistics of industrial disputes in British India for the quarter ending June 30 show that Bombay has been the worst sufferer with 24 out of 42 disputes.

The number of men involved was 22,208 for the loss of 172,915 days. Seventeen disputes arose over the question of wages. Of the total, eight disputes were successful.

There were six disputes in Bengal, involving 15,374 men, losing 61,935 days. In the United Provinces, three disputes, involving 5,410 men and the loss of 145,741 days, arose over wages. All three were unsuccessful. In three strikes in the Central Provinces, involving 2,615 men, the number of days lost was 53,215. Two disputes alone involved 3,100 men and ended in failure. The number of days lost was 52,089.

Out of the 42 disputes, 30 arose in cotton and woolen mills, which involved 32,803 men for the loss of 414,455 days. Three disputes occurred in jute mills and the men involved were 11,614 for the loss of 56,342 days.

COURSE OF TRADE

The trade statistics of the first five months of the current financial year show a falling of Rs. 7.15 crores, or over 27 per cent. and or Rs. 5.65 crores or 23 per cent. respectively, in imports, as compared with the figures for the corresponding period of the year 1932-33 and 1931-32 but an improvement of Rs. 6.03 crores, or nearly 21 per cent. and or Rs. 15.42 crores, or 79 per cent. respectively, in exports. During this period imports of gold declined by Rs. 4 lakhs and Rs. 28.48 lakhs to Rs. 28.13 lakhs and those of silver by Rs. 73.33 lakhs and Rs. 1.06 crore to Rs. 4.9 lakhs respectively. Imports of merchandise amounted to Rs. 18.45 crores, showing a fall of Rs. 6.37 crores or over 25 per cent. and Rs. 4.3 crores, or nearly 19 per cent. The fall of Rs. 6.37 corres as compared with the figures for the corresponding months of 1932-33 is chiefly accounted for by smaller arrivals of most of the principal articles of import, the more important being raw cotton (−38,927 tons and−Rs. 3.43 crores), cotton piecegoods (−23¾ million yards and−Rs. 61.28 lakhs, kerosene oil (4½ million gallons and −Rs. 44.39 lakhs), cotton twist and yarn (−nearly 4 million lbs. and−Rs. 42.9 lakhs), silk raw (−over ¾ million lb. and−Rs. 34.92 lakhs), metals and ores (−Rs. 30.67 lakhs), alizarine and aniline dyes (−Rs. 28.22 lakhs) and artificial silk piecegoods (−over 12¾ million yards and−Rs. 27.67 lakhs).

Extracts from Directors' Report:

Report for the twelve months ended 31st March, 1933.

The Company has during the year under report, made a profit of Rs. 50,658-15-10 which, with the sum of Rs. 40,911-1-9 brought forward from last year's accounts, makes up a total of Rs. 91,570-1-7. Out of this sum, the Directors have decided to appropriate a sum of Rs. 75,000 for depreciation on machinery and to carry the balance of Rs. 16,570-1-7 to the next period.

The Directors regret that it has not been possible to show a better result but hope that in view of the acute world wide depression it will not be considered unsatisfactory. As an indication of the depressed condition of the market, it may be mentioned that the prices of cocoanut oil and copra continued to fall steadily throughout the year leaving no margin for an industrial profit between the prices of the raw materials and of the finished article, and at the end of the year stood much lower than at any time during the last 23 years. To add to this difficulty, the heavy imports of Ceylon cocoanut oil and copra into India have aggravated the situation, and have made the position of the Cochin growers as well as millers very difficult. Owing to the special facilities that a Port like Bombay offers, Ceylon copra is imported into Bombay at the same price as the millers have to pay in Cochin and sometimes even lower. It has, therefore, not been possible for the Company to buy Ceylon copra (cheap as it is in Ceylon and in spite of the Ottawa preference that has been in force since January, 1933) on a parity with the local copra, whereas the millers of the great sea port towns have been put in a better position than the Cochin millers in relation to the cocoanut oil trade in the country generally.

The cocoanut oil produced by the Company, however, still continues to find a ready and even preferential sale in the Cochin market, but the sales in Bombay have been practically stopped as it is not possible to compete with the oil imported from Ceylon. The position with regard to cocoanut cake, for which there is no market in Cochin, is however different. Bombay, which is the biggest consumer of cocoanut cake, is now being supplied with cocoanut cake manufactured in Bombay from Ceylon copra. Efforts are therefore being made to find other outlets for the cocoanut cake within the country, so that it may not become necessary to sell at low prices in foreign markets.

In addition to copra, during the year substantial quantities of mowra seeds were crushed as well as lesser quantities of other jungle seeds, as and when they were obtainable. These oils are used in the manufacture of soap. As there is no ready market for the oil cakes from these seeds, experiments have been made in turning them into suitable organic manures and have been successful. The manures made by the Company will therefore be put on the market shortly.

The sales of Cocogem have shown a small but steady decline during the year. This decline was, however, anticipated and no improvement in the sales is expected until there is a general improvement in the purchasing power of the community.

The Hydrogenation Plant started working during the year under report. The vegetable product manufactured by the Company has been generally approved in the market, in spite of considerable competition from foreign as well as Indian made products. The heavy decline in the price of dairy produce has reduced the demand for vegetable product all over the country. This competition will cease to exist when there is an improvement in trading conditions and purchasing power, but a far more dangerous, because insidious, competition is that of the Japanese Hardened Fish Oil which is being imported in large quantities—and often under false descriptions—at rates which are below the prices even of crude vegetable oils manufactured in the country. For comparison the prices of Indian Vegetable Product and Japanese Hardened Fish Oil are given below:—Indian Vegetable Product Rs. 9-8-0 per tin of 40 lbs.; Japanese Hardened Fish Oil Rs. 5-8-0 per tin of 40 lbs.

The Company has, along with other manufacturers of Vegetable Product in India, made a joint representation to the Government of India for protection against this dumping. The Government are considering their request, but no decision has yet been announced.

The sales of washing soaps have again shown an increase over the previous year. The extension of the soap plant was completed by the middle of the year, and every effort is now being made to increase the sales to the full capacity of the extension. The margin of profit in the soap trade, however, continues to be very small, in view of the competition that has to be faced both from imported soaps and from numberless soaps of inferior quality made in India. The c.i.f. value of imported washing soaps during the year 1928-29 was Rs. 29-8 per cwt. whereas by 1932-33 it has dropped down to Rs. 19-7 per cwt. There is a new menace in this direction also, and that is the rapidly increasing imports of low quality soaps from Japan at incredibly low prices—it is as low as Rs. 11 per cwt.—against which the Government has been requested to protect the soap industry. The '501' soap manufactured by the Company is now recognised as the standard of quality in the Indian Washing Soap market. If, however, the progressive development of the Indian Soap Industry is to continue, it will be necessary for Indian manufacturers to ask for legislation in conformity with the practice in most advanced countries, prohibiting the import or manufacture of soaps below a certain standard of quality as being unsuitable for human use.

The toilet soaps made by the Company are now available in the market, but, as they have not been on sale for a sufficient length of time, it is too early yet to say anything about the prospects. The Directors are glad to be able to say that these soaps have been well received, and when their good qualities are sufficiently well known to the public, there should be a very good market for them.

The Minor Products Plant which was started experimentally last year, continues to make toilet and household preparations for which there is a steady and growing demand. The Plant is a small one, and will not be extended until the demand for the products which are being turned out has been properly gauged.—N. B. Saklatvala, Chairman.

KANGRA VALLEY SLATE CO., LD.

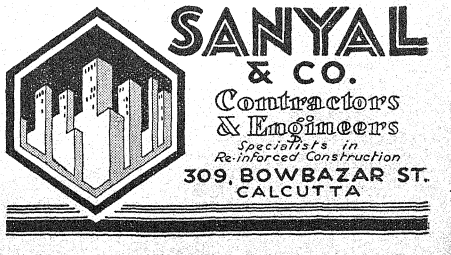
The Company have the pleasure in submitting herewith their accounts for the year ended 30th June, 1933, which show a profit of Rs. 37,460-11-6. To this has to be added Rs. 4,420-13-2 brought forwajrd from last year's accounts making in all Rs. 41,871-8-8. To this has to be added also a further sum of Rs. 6,000 transferred from "Reserve Fund for Depreciation on Investments" subject to confirmation by the shareholders as all the securities held by the Company have appreciated and their market price is about Rs. 12,000 more than the book value. This Reserve is not required now, thus making in all Rs. 47,871-8-8 balance in hand at credit of Profit and Loss Account.

The above balance of Rs. 47,871-8-8 includes Rs. 19,779-0-5 relating to the working of 614 kanals and 8 marlas for which as advised last year a decree for possession was passed on the 11th July, 1930, against the Company in favour of the zemindars of Kunyara. After setting aside this amount, there remains a balance available of Rs. 28,092-8-3.

This result cannot but be considered satisfactory.

The Branch Managers and staff have worked very satisfactorily and the thanks of the shareholders are due to them for the good results attained.

The Directors propose that the profits be disposed of as follows:—Dividend for the year ended 30th June, 1933, at the rate of 9 per cent. per annum free of Income-tax Rs. 10,800, Depreciation on Block Account Rs. 1,000, Depreciation on Kunyara Furniture Rs. 118-10-6, Depreciation on Kund Furniture Rs. 100, Depreciation on Kunyara and Kund Plant and Machinery, Rs. 100 each, Rs. 200, Provision for Income-tax to be paid on the profits of the Company for the year ended 30th June, 1932, Rs. 5,000, Provision to meet legal charges expected to be incurred



in engaging a Senior-most Counsel to argue the appeal which is expected to be heard towards the end of the current year, Rs. 5,000, Transferred to Bad Debts Reserve Fund increasing it to Rs. 3,500, Rs. 487, balance to be carried forward Rs. 5,386-13-9, total Rs. 28,092-8-3.

The Kunyara Branch has done well while a further improvement in the results of Rewari Branch is again shown.

One of the Directors visited both Kunyara and Kund Branches during the year under report and found the management and condition of the Quarries good.

The reports received from the Kunyara and Kund Managers are satisfactory.—Sohan Lal (R. B.), Managing-Director, Binda Saran, Tara Chand Kapoor, Directors.

NEW INDIA ASSURANCE CO., LD.

Report for the year ending 31st March, 1933.

The net premiums in the Fire Department amounted to Rs. 44,38,472-7-4 showing an increase of Rs. 2,33,496-11-4 as compared with the previous year. The net claims, paid and outstanding amounted to Rs. 23,56,706-14-4.

Commission, Expenses of Management and Foreign Taxes, etc., amounted to 42.9 per cent. of the premium income, as against 42.3 per cent. for the previous year.

The Account shows a surplus of Rs. 2,29,678-2-1, out of which an amount of Rs. 1,04,678-2-1 has been transferred to Profit and Loss Account.

The Reserve for unexpired liability remains at 40 per cent. of the premium income for the year, and an amount of Rs. 3,25,000, inclusive of the Reserve of Rs. 2,00,000, separately established the previous year, has been added to the Additional Reserve now amounting to Rs. 17,65,000, the combined reserves equal 79.8 per cent. of the premium income, as against a ratio of 79 per cent. for the previous year.

The net premiums in the Marine Department amounted to Rs. 20,71,334-9-6 showing a decrease of Rs. 2,12,730-2-0 as compared with the previous year, and the net claims, paid and outstanding, to Rs. 16,98,508-4-1.

Commission and Expenses of Management amounted to 16.1 per cent. of the premium income as against 15.4 per cent. for the previous year. The Fund has been increased to Rs. 23,50,000 which equals 113.5 per cent. of the premium income, as against a ratio of 100.04 per cent. for the previous year.

An amount of Rs. 68,999-10-1 has been transferred to Profit and Loss Account.

The net premiums in the Accident Department amounted Rs. 5,18,496-10-2 showing a decrease of Rs. 76,128-13-6 as compared with the previous year, and the claims, paid and outstanding to Rs. 2,57,746-6-2.

Commission and Expenses of Management amounted to 41.4 per cent. of the premium income, as against 38.5 per cent. for the previous year.

The Account shows a surplus of Rs. 94,781-0-3, out of which Rs. 44,781-0-3 has been transferred to Profit and Loss Account, and Rs. 50,000 added to the Additional Reserve.

The Reserve for unexpired liability remains at 40 per cent. of the premium income, and the Additional Reserve is Rs. 2,50,000. The Combined Reserves equal 88.2 per cent. of the premium income, as against a ratio of 73.6 per cent. for the previous year.

Life Department.—In the year under review 6,557 proposals were received for assurances amounting to Rs. 1,40,57,450. Of these, and a few others awaiting completion at the end of the previous year, 5,015 resulted in policies for Rs. 1,05,21,700, yielding an annual premium income of Rs. 5,79,959-12-0.

The total number of policies in force is 7,878 assuring a sum of Rs. 2,19,57,527-13-6 of which Rs. 19,72,000 is re-assured.

Claims by death of 38 policyholders amounted to Rs. 1,26,000 after deduction of reassurances.

A proportion of expenses of management which may be taken at approximately Rs. 20,000 has not been debited to this Department, but it has borne expenses incurred directly on its own account.

The approximate Interest earned by the Revenue Accounts has been credited to those Accounts. The remaining Interest, plus Transfer Fees, amounts to Rs. 4,31,403-3-0. An amount of Rs. 1,04,678-2-1 has been transferred from Fire Account, Rs. 68,999-10-1 from Marine Account, and Rs. 44,781-0-3 from Accident Account.

After providing for all other outgo, bringing in the balance of last year amounting to Rs. 2,01,234-14-2, there remains a balance of Rs. 7,37,313-5-4, which the Directors recommend shall be dealt with as follows:—

Payment of a dividend at the rate of Re. 1-2-0 per share, which will absorb an amount of Rs. 5,34,079-2-0, leaving Rs. 2,03,234-3-4 to be carried forward to next account.

Securities are valued at cost price. At the close of the year under review the aggregate market value exceeded the book value.

Sterling is taken at 1s. 6d., and American Exchange at Rs. 275 to $100.

The financial position of the Company stands as follows:—Capital Paid up Rs. 71,21,055, Fire Fund Rs. 35,40,389, Marine Fund Rs. 23,50,000, Accident Fund Rs. 4,57,399, Life Assurance Fund Rs. 8,67,552-15-8, Profit and Loss Account Rs. 7,37,313-5-4, Investment Reserve Rs. 5,92,282-14-7, Reserve for Exchange Rs. 25,000, equal Rs. 85,69,937-3-7, total Funds Rs. 1,56,90,992-3-7.

As a result of the year's operation, the Total Funds are increased by Rs. 10,08,198-1-7.—N. B. Saklatvala (Chairman), F. E. Dinshaw, Phiroze Sethna, Ambalal Sarabhai, D. F. Batliwala, Chunilal V. Mehta, Suleman Cassum, J. D. Ghandy, Directors. W. Millard, Sub-Manager. Bombay, 23rd August, 1933.

Extracts from Directors' Report:

Report for the year ending 30th June, 1933.

After payment of Interest on the Mortgage Bonds, Rs. 2,36,045-13-9, the required contribution to the Sinking Fund for their redemption Rs. 1,82,747-12-2, and the appropriation of Rs. 7,80,937-10-8 to Depreciation, the Profit and Loss Account shows a profit for the year of Rs. 7,31,141-0-4. To this is to be added the amount carried forward from the last Account Rs. 1,30,911-4-2, making a total of Rs. 8,62,052-14-6. From this must be deducted the dividend on Preference Shares for the half-year ending 31st December, 1932, paid at that time Rs. 1,05,000, leaving a balance available, according to the Balance Sheet, of Rs. 7,57,052-14-6, the Directors having duly authorised the payment of dividend on Preference Shares for the half-year ending 30th June, 1933, Rs. 1,05,000, there now remains Rs. 6,52,052-14-6, which they propose shall be dealt with as follows:—To pay a dividend of 8 per cent. on the Ordinary Shares, free of tax, Rs. 4,89,904, and to carry forward the balance of Rs. 1,61,148-14-6.

The number of Exchange lines working at the end of the year was 10,939 against 10,698 a year earlier, extensions 3,698 against 3,696 and private lines 640 against 574.

During the year there was little Capital expenditure on Underground cable and outside plant, but a new building was erected on land which had been acquired for the purpose in Howrah and a new Exchange installed to replace the old Howrah Exchange which was approaching the end of its useful life and was situated in a somewhat unsatisfactory hired building. All the Company's Exchanges are now housed in the Company's own buildings, designed and erected for the purpose. During the year also an Air Conditioning Plant was installed in Burra Bazar Exchange and as the new Howrah Exchange which was opened in June is similarly equipped, the Company now has Air Conditioning Plant in all its Exchanges, and its officers are convinced that there is economy in so eliminating the humidity of the tropics in the Monsoon season where small apparatus and exposed cable are fitted in confined spaces in which not many human beings are employed.

Taking advantage of their option to do so, the Directors arranged with such spare cash as could be made available to redeem at 102 per cent. at the end of the year under report Mortgage Bonds to the nominal value of £50,000, which were selected by a drawing *ad hoc* made in London in the month of March according to the provisions of the Mortgage Trust Deed. They have further given notice to the Bondholders that all outstanding Bonds will be redeemed on 31st December, 1933. To provide for such redemption they have resolved to offer new Ordinary Shares at par to existing Ordinary Shareholders in the proportion of one new share to every two shares already held. The interest on Mortgage Bonds for the year under report amounted to Rs. 2,36,045-13-9. This interest which will, in such case, no longer be required to be paid, is the equivalent of very nearly 8 per cent. on the new shares which will be issued. It is proposed to receive application for new shares from existing Ordinary Shareholders in England as well as in India. The necessary notices giving detailed instructions with forms of application will be issued early in November to the registered addresses of Shareholders, and purchasers of shares are advised to register their transfers in the Books of the Company early in order to facilitate the arrangements for receipt of applications.—A. E. Mitchell, Chairman. K. L. Jatia, S. N. Law, G. B. Morton, J. S. Henderson, W. M. Craddock, W. H. Thompson, Directors.

INDIAN TURPENTINE & ROSIN CO., LD.

Synopsis of Balance Sheet:

Total Rs. ...	16,57,985	Total ...	16,57,985

Extracts from Directors' Report:

Report for the year ending 31st March, 1933.

They are glad to be able to report that after providing for Depreciation, Commissions, Royalty on Crude Resin and Bonus to Staff, the balance at credit of Profit and Loss Account amounts to Rs. 73,482-4-3 which they recommend to be disposed of as follows:—Provision for Income Tax and Super Tax 10 per cent. Dividend on Rs. 10,000, 60,000 Ordinary 'A' shares of Rs. 10 each, fully paid up but ranking for Dividend at Rs. 5 each Rs. 30,000, 60,000 Ordinary 'B' shares of Rs. 10 each, paid up at Rs. 5 each Rs. 30,000 total Rs. 60,000, to be carried forward to next year's account Rs. 3,482-4-3, total Rs. 73,482-4-3.

Owing to general trade-depression, the business of the Receivership of the Indian Bobbin Co., Ltd., yielded a profit of Rs. 2,671-9-5 only. Our Company's share comes to Rs. 1,781-0-11.

Owing to the unfair Japanese competition brought about by the depreciation of the Yen, the progress of Bobbin sales has been greatly impeded.

The sum of Rs. 3,57,417-10-3 shown in the Balance Sheet as due by the Indian Bobbin Company, Limited, Receivership represents the amount advanced for running the Receivership business.—J. P. Srivastava, F. Canning, J. L. Sathe, Mukandi Lal, D. Sinha, C. T. Allen, Directors.

SCINDIA STEAM NAVIGATION COMPANY.

Extracts from Directors' Report:

The directors of the Scindia Steam Navigation Company submit their report for the year ended June, 30, 1933. The working result of the year shows a loss of Rs. 3,13,022 and, adding to same Rs. 1,58,223 for expenses, and Rs. 4,00,000 for depreciation as usual, the total loss comes to Rs. 8,71,245; but taking into account Rs. 3,15,226 earned by way of interest, dividends, etc., the nett loss comes to Rs. 5,56,019. During the first half of the financial year, the unhealthy competition on the coast, as stated in our last report, continued unabated with the result that the rates remained at a low level. In the beginning of 1933, the companies operating from Burma ports agreed to revert to economic rates; but no sooner was there slight improvement in the situation, than some Japanese companies began to dump tonnage at Burma ports and actually loaded four ships at low rates. They gave indications of further tonnage at similar rates for the whole year which greatly demoralised the market. With a view to protect their shippers and maintain their position on the coast, the companies were compelled to reduce the basic rate for the whole year up to the end of 1933 from Rs. 10-8 to Rs. 7-4 nett, Rangoon-Bombay, with retrospective effect from January 1, 1933, and had to make a further reduction of Rs. 2 per ton during March, April and May. These drastic reductions in rates naturally had a very adverse effect on the working result on this year. The company has thus made a loss due to factors over which the directors had no control. The above position was brought to the notice of the government but they could not give direct proteciton in spite of the fact that the Japanese coastal trade has been reserved for its own nationals. As the position stands to-day, there is plenty of superfluous tonnage on the coast, much more than the trade can absorb and there is no scope whatever for further tonnage. The directors, however, hope that as a result of negotiations, on the basis of friendly reciprocity, with the Japanese delegation now going on in Simla, the government will succeed in evolving such an arrangement as would protect the interests of shipping companies now plying on the coast. The directors take this opportunity to inform that they have practically concluded a working agreement with the British India Steam Navigation Company, and hope to reach a satisfactory agreement, in the near future, with the shipping companies operating on the west coast of India. During the year under review, the company took over the management of the Bengal Burma Steam Navigation Company, which has been maintaining a passenger service between Rangoon-Chittagong since 1928. The directors considered it desirable to accept the managing agency of the Bengal Burma Steam Navigation Company, in the interests of both the companies and therefore concluded an arrangement accordingly. The Bengal Burma Steam Navigation Company and the British India Steam Navigation Company have also reached a working agreement and the passenger fares, that had been reduced to uneconomic level during the period of unhealthy competition, are now being put on their original economic level. It is hoped that, with the co-operation of the directors of the Bengal Burma Steam Navigation Company and their enthusiastic chairman, Mr. Abdool Baree Chowdhury, and the patriotic passengers who travel between Rangoon and Chittagong, this company would soon establish a good position in the Bay of Bengal. Under the new working arrangement, the company is now maintaining a passenger service between Rangoon and Coromandel Coast and thus it has entered into its another legitimate field of activity. For the purpose of maintaining efficiently cargo and passenger services, the directors have purchased three cargo ships during the financial year and three passenger ships recently, all of which are now running satisfactorily in their respective spheres. With regard to the companies in which the Scindia Company holds shares, it will be observed from the balance-sheet that a dividend of Rs. 50,000 has been received from Messrs. Narottam, Limited, a dividend of Rs. 30,250 from The Eastern Bunkers, and a dividend of Rs. 16,891 from Messrs. Narottam and Pereira, for the year ended June 30, 1932. Scindia Steamships (London) have been attending to the work of the company in London as usual and its working shows a profit of £337 for the year ended June 30, 1933. The fleet of the company has been maintained in good order and insured for £956,270 for the current year.

AHMEDABAD ADVANCE MILLS, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	10,00,000	Block (nett) ...	42,79,088
Reserves ...	56,14,112	Stock-in-trade ...	9,55,724
Debts ...	21,72,186	Stores & Spares	1,15,967
Profit & Loss ...	62,225	Outstandings ...	3,25,226
		Cash & Invests. ...	31,72,518
Total Rs. ...	88,48,523	Total Rs. ...	88,48,523

Extracts from Directors' Report:

Report for the year ended 30th June, 1933.

The profit for the year and the balance available for disposal are as under:—Profit for the year Rs. 2,31,259-3-11, Add—Balance brought forward from the Accounts of the previous year Rs. 965-6 total Rs. 2,32,224-9-11; Less—Amount paid as an Ad-interim Dividend for the half-year ended 31st December, 1932, at Rs. 7 per share Rs. 70,000, balance Rs. 1,62,224-9-11.

From this sum the Directors have made the following allocation:—To, Depreciation Fund Account, Rs. 1,00,000, leaving a balance of Rs. 62,224-9-11. The Directors recommend transferring from the Equalisation of Dividend Fund Account to the Profit and Loss Account a sum of Rs. 38,000, which would make available for disposal, Rs. 1,00,224-9-11.

Of this sum the Directors recommend the following appropriation:—Payment of Final Dividend for the half-year ended 30th June, 1933, at Rs. 10 per share, free of Income-Tax, Rs. 1,00,000, carrying forward to the accounts of the next year, Rs. 224-9-11, total Rs. 1,00,224-9-11.

The Directors regret that the year under report, far from showing any improvement in trading conditions, was marked by a greater depression. The consequent slackness of demand for maunfactured goods brought about fall in prices, with the result that goods had often to be sold at unremunerative rates. This has affected the profits of the Company.

In view of the small profit made by the Company, the Agents, Messrs. Tata Sons, Ltd., have foregone a part of their commission this year also, by charging 10 per cent. on the profits instead of the minimum commission of Rs. 50,000 due to them under their agreement.

Mill Extension.—The erection of the new machinery and the over hauling of the old machines has been completed during the year. The new machines were gradually put into commission from December last, and by February, 1933, the full equipment came into operation.

The properties of the Company at Ahmedabad and Navsari and the stocks at the mills have been insured for Rs. 29,66,500.—N. B. Saklatvala, Chairman. J. D. Ghandy, Director. Tata Sons, Ld. Agents Bombay.

WORLD OF INDIAN FINANCE

Calcutta, Oct. 20.

Money has been easy, with the quotable rate being ½ per cent. both in Bombay and in Calcutta. The turnover of business has been on the small side as the week has been cut into by two holidays in Calcutta and three in Bombay. The gravity of the bank raids, which took place in the Western Capital after the reported difficulties of the Currimbhoy group, is indicated in the return of the Imperial Bank for the week ended October 13. Loans have increased by Rs. 191.95 lakhs and Cash Credits by Rs. 60.84 lakhs. An increase of Rs. 2½ crores under these two heads may be taken as meaning that a great part of the funds so obtained was needed by the banks for meeting the demand of nervous depositors. While the higher figure shown under Loans and Cash Credits should certainly be connected with the runs on the banks, it is difficult to understand the expansion of inland Bills by Rs. 124.04 lakhs. It is unthinkable that there could have been a sharp and sudden activity in trade circles resulting in the emergence of inland bills of this volume. We belive that this bulge of Rs. 1¼ crores in discounted bills must also have some bearing on the bank troubles in Hornby Road. The banks themselves could not have had such a large volume of trade bills in their portfolio. And even if they had, it is hardly likely that, in a country where rediscounting of bills with the Imperial Bank is practically unknown and would be resorted to only when a banking institution is pushed to an extreme, the particular banks which experienced runs in Bombay would have adopted the course of tendering their Treasury Bills for rediscount. Our own surmise is that the bank or banks in question should have, instead of taking loans against government securities, offered Treasury Bills to be taken up by the Imperial Bank for the remaining days of maturity.

Now, if the Imperial Bank had discounted Treasury Bills, it amounts really to the Bank having purchased those Bills. If the Imperial Bank bought Treasuries, the proper course would have been for this investment to be shown under government securities. But it must be remembered that the Imperial Bank does not seem to observe a hard and fast rule as regards the information revealed in the weekly returns. The Bank might also argue that if it had bought Treasuries from the Government for the usual period of three months or six months or nine months or twelve months as the case may be, it would have shown it under government securities. But as the Bills in this particular transaction have been bought only for the unexpired portion, the more proper course was to show them under Bills Discounted and Purchased.

While so far as the increase in the Bills is concerned , there need be no question of the banks concerned repurchasing the bills, the sums taken for last week's crisis under Loans and Cash Credits would, naturally, be returned within a week. The Imperial Bank does not now advance money to banks except for a minimum fixed period of seven deys. In other words, even if the banks had been able to repay the loans earlier on account of the return of funds from depositors, there was this provision that the minimum for the loans was a week. Wednesday, Thursday and Friday have been holidays in Bombay and it is quite likely that the funds might not have been repaid to the Bank in time to cause a considerable reduction in Loans and Cash Credits in the Bank's statement which will be published next week. But we do believe that the increase that took place under these two heads must be purely of a temporary character and that the advances in this behalf would be liquidated by October 27 at the latest.

As all the available surplus resources of the banks would be used in liquidating, over the next few days, the advances taken from the Imperial Bank, there cannot be much of spare cash flowing into Treasury Bills. It is now obvious that Treasuries are becoming a more and more difficult proposition for the Government. There has been a substantial shrinkage in the volume of applications on the tender days. Sales of intermediates have sunk to a neglible figure. There have been rapid rises in the yields that have had to be offered for the securing of the full quota of Rs. 1½ crores. Against Rs. 1½ crores on offer last Tuesday, applications received came to Rs. 17¾ lakhs. The average rate of accepted tenders was Rs. 1-3-8 as against Rs. 1-1 9 in the previous week. A sudden jump of two annas per cent. is a clear indication that the market is in no mood to take much interest in Treasury Pills. Sales of intermediates in the week ended last Monday came to Rs. 7 lakhs as against

Rs. 10½ lakhs in the earlier period. The rate for intermediates in the current week has had to be lowered to Rs. 99-11-6 as against Rs. 99-12 in the previous week and Rs. 99-12-6 a fortnight earlier.

There are many reasons for this growing apathy of banks towards Treasury Bills. In the first place, Treasury Bills taken up in this part of the year would mean locking up of funds for about a month of the busy season. In the second place, the yield now forthcoming has not been sufficiently attractive for exchange banks to bring in funds from London. The result is that a large part of the floating debt is now contributed by the Indian banks and Indian investment institutions. In the third place, the banking troubles of last week meant a substantial reduction of the floating balances with banks. In the fourth place, while every banker feels that the Government would be obliged to go on increasing the yield on Treasuries week after week, there is a positive reluctance to invest in Treasuries for anything more than immediate requirements. It may be stated, in broad terms, that while the prospect of yields on Treasuries is towards lower levels, bankers invest in short-term Bills in anticipation of their requirements. During the period when the prospect of yields on Treasury Bills is towards higher levels, bankers are niggardly in their investment in short-term Bills in the hope that by delay they stand to obtain more favourable rates. Taking all these circumstances, we do not think that there can be any change in the money market position or the Treasury Bills position till the middle of November. In the latter half of November there are fairly heavy Treasury Bills Maturities. It is possible that the inflow of large funds to the market from this source might compel banks to take to Treasuries much more kindly than they have been doing for the past four or five weeks.

The Maturities from tomorrow to the end of the month amount to Rs. 3 crores. There is every reason to believe that sales of intermediates in the current week would not be any larger than last week. It would, therefore, mean that the Government may be obliged to have recourse to further advances on ways and means account from the Imperial Bank. The latest return of the Bank shows that the Treasury returned Rs. 2 crore last week, the outstanding balance being Rs. 4 crores. Taking account of the poor sales of Teasury Bills and the substantial Maturities, and taking account of the month-early disbursements that should be made early in November, we look forward to a further increase in the ways and means advance.

By the same token, banks have not had any spare funds to divert to the giltedge market. The operators themselves are far from being in the mood to undertake any large commitments. The developments in Germany were interpreted by the Bombay giltedge market as an important bearish influence. 3½ per cent. Paper declined to Rs. 82-13. This setback was also influenced by the weaker reports received from London. Immediately after the German shock, 3½ per cent. India sterling paper receded by £1 1/8. At the time of writing, the rate is £86 3/8. There has been a better feeling in London. Likewise, the price in India has also looked up. At the close of business on Friday, 3½ per cent. Rupee Paper was quoting Rs. 83-6. *Indian Finance* has always felt that, on the intrinsic position of Government finance and Government's future borrowing programmes, the giltedge market must tend towards higher levels. At the same time, it has stood for a policy of intelligent and timely support from Government, especially when the market shows a sagging tendency out of all proportion to the intrinsic needs of the situation. The Government have been content to stand by and do nothing. The result is that a market, which developed great activity and showed real buoyancy, now lies in a depressed and listless condition.

There is another complication that is likely to arise if the Government were to insist upon carrying through, in the Reserve Bank Bill, the provision for compulsory deposit of cash with the Reserve Bank on the part of member banks. If such compulsory deposits are insisted upon the banks concerned would in most cases, have no other alternative than to sell government securities to find the extra cash. We understand that the total deposit that the scheduled banks will have to make with the Reserve Bank will be in the neighbourhood of Rs. 13½ crores. Even assuming that a good few of the banks would be able to find the extra resources either by drawing on London or by working on a lower cash percentage, there should be sales of securities at least to the extent of Rs. 7 crores or so on the part of banks for whom the only way of finding the additional cash would be reduction in the giltedge portfolio. Nor do we believe that exchange banks would like to keep a permanent debit against them in their London offices. As the cash that is to be paid into the Reserve Bank will remain tied up more or less permanently, resources borrowed from London would mean a permanent debit. Will the exchange banks prefer this course to outright sale of a portion of their giltedge investments in India? Nor can we believe that any considerable reduction in the cash percentage of banks is possible. The deposits made to the Reserve Bank cannot be withdrawn under any clause of the Bill. For all practical purposes, the cash paid to the Reserve Bank is frozen and useless. The banks would, therefore, have to maintain the same cash percentage as they have been doing hitherto. For all these reasons, we cannot but think that the sales of securities, that the banks will be making immediately on the inauguration of the Reserve Bank, will be quite substantial. If our anticipations prove true, this might well lead to a grave crisis in the giltedge market. The question, therefore, is whether, in view of so grave a menace to the market, the Finance Member would agree to the removal of a feature

FINANCE ABROAD

	Sterling Dollar rate	Sterling Franc rate	London Price of gold
October 12 ...	4.66¾	79.09	133s. 5d.
October 13 ...	4.60⅛	80.09	132s. 10½d.
October 14 ...	4.57⅝	80.46	131s. 8d.
October 16 ...	4.52½	80.62	128s. 6d.
October 17 ...	4.55¾	79.60	130s. 11½d.
October 18 ...	4.57½	81.50	132s. 0½d.
October 19 ...	4.54½	80.93	129s. 11d.

The week has witnessed a recovery of the dollar in terms of sterling and sterling in terms of the franc. The London-New York cross rate has fallen from 4.66¾ on October 12th to 4.54½ on October 19. There was a sharp fall from 4.57⅝ on October 14 to 4.52½ on October 16. Practically the same level was reached again on October 18; but the relapse came again on the last day under review. The sterling franc rate witnessed a steady rise to 80.62 but thereafter it fell on October 17 to 79.60. A sharp rise to 81.50 and a fall thereafter to 80.93 are also recorded. It is interesting to note that in the New York market rumours that France was abandoning the gold standard were responsible for considerable weakness of European currencies. On October 18, the franc opened at 5.20 and closed at 5.52 and sterling fell from 4.61⅝ to 4.50½. It may be supposed that this upset in the New York exchange market had its repercussions in the London market, and the sharp changes in rates during mid-week are largely a reflection of the unsettlement caused by the rumour that France was considering a departure from gold.

The week's news regarding the Recovery programme in America show that during the period intervening there has been no notable development in America in respect of monetary questions. A special cable to the *Statesman* in its issue of October 17 makes reference to an inspired statement published in Washington by an unknown high authority declaring that Mr. Roosevelt does not consider the time propitious yet for the stabilisation of the dollar. There is no inspiration needed to suggest that Mr. Roosevelt is in the present conditions opposed to the stabilisation, even when it is coupled with the promise of the co-operation of bankers in his desire to bring about an expansion of credit, which a little thought will show is essential for the success of his Recovery programme. A later development than the one referred to above and which is referred to in the report of the *Statesman* is that the Federal Reserve Board and Treasury officials have prepared a monetary programme for the President on lines excluding currency inflation and embracing early and definite stabilisation; and it has been suggested that a middle course may be found in pegging the dollar within certain narrow limits of fluctuation so that its ultimate value might with reasonable confidence be fixed somewhat next year and the gold standard restored.

While this suggestion may seem to be theoretically sound any proposal to stabilise the exchanges must reckon with the readjustments of the large capital movements set afoot by the instability of the last few months. So far as the President is concerned, his eyes are so fixed on the balance of production and distribution, of employment and of prices and wages that he is not inclined to attach any importance to the question of stabilisation at this stage. In other words, Mr. Roosevelt's is just opposed to the banker's mentality, which sees all economic life in terms of the foreign exchanges. Just as in the broader questions Mr. Roosevelt is determined to give the Recovery programme a trial before taking up monetary questions, so within the realm of money and credit, he must be feeling that his plan to bring about an expansion of credit must have its chance before he makes up his mind on the question of the inflation of currency. It is not unreasonable to suppose, nor is it unreasonable for Mr. Roosevelt to think, that, unless credit expansion can be brought about and its effects carefully watched, no decision in regard to the question of inflation of currency can be made. And it is obvious that the question of inflation of currency will have to be settled before the question of stabilisation can be taken up. We, thus, come to the point that it is yet a long time afar before Mr. Roosevelt can make up his mind on matters on which the bankers and, as it would seem, some of the Treasury officials also are pressing him to take immediate decision.

The Assembly of the French Parliament on October 17 is of widespread international interest. Thanks to the close connection between the state of the French national budget and the fate of the franc, the world will follow with keen anxiety the attempts of France's legislators to grapple with the problem of the national deficit. It is clear there has been no improvement either in the unbalanced position of the budget or in the readiness of the various sections of the Chamber of Deputies to sacrifice their interest in the cause of sound finance. The Right is ready to approve of economies but not taxation and the Left *vice versa*. And there is little sign of any attempt to bridge the gulf between the two extremes.

M. Daladier's difficulties have thereby increased. The Government, declining to raise further loans, has tabled two Bills. The first is intended to produce 5,400,000,000 francs by emergency measures, such as a special business turnover tax, a tax on petrol instead of motor cars, and a general tax on Government salaries and pensions. The reform of certain monopolies, a petrol importation tax, and also a new monopoly on the sale of arms are included in the Bill while a national lotteries proposal is expected to produce 650,000,000 francs.

The second Bill is an ordinary Budget Finance Bill to supply the remaining 600,000,000 francs by excess of revenue over expenditure.

HINDUSTHAN CO-OPERATIVE
INSURANCE SOCIETY, LTD.
NEW DESHABANDHU POLICY
Most up-to-date Insurance Cover
at cheap cost
and
other attractive and Novel Schemes
of Assurance.
LOWEST PREMIUM—HIGHEST BONUS

HEAD OFFICE :
HINDUSTHAN BUILDINGS,
CALCUTTA.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3¼ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, October 17. The total amount offered was Rs. 1,78,25,000. Tenders at Rs. 99-11-3 and above were accepted in full and those at Rs. 99-11 were allotted approximately 81 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-3-8 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, October 24. Successful tenderers should make payment on Saturday, October 28. Other conditions are as usual.

Three months intermediates will be sold from October 18 to 23 at Rs. 99-11-6 per cent. subject to the conditions previously announced.

Three months intermediates sold from October 11 to 16 amounted to Rs. 7 lakhs.

STERLING TENDERS

The Controller of the Currency notifies that there were no tenders for sterling on Tuesday, October 17.

On Wednesday, October 25, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 30th September, 1933, amounted to £40,000,000 and was held in the following form:—

	£
1. Cash at short notice at the Bank of England	3,606
2. British Treasury Bills	15,989,211
3. Other British and Dominion Government Securities	13,894,849
4. Gold

JOINT STOCK COMPANIES IN TRAVANCORE.

The Report of the Working of the Joint Stock Companies of the State of Travancore for the year 1107 M.E. illustrates forcibly the recent activity that has arisen in joint stock company enterprise. During the year, 275 new companies were registered, as against 40 in the previous year. The most notable feature is that of the new companies registered no fewer than 247 were insurance companies. So far from expressing satisfaction at this fact, the Registrar is considerably concerned thereat. He is fully alive to the danger of the State being flooded with mushroom life insurance companies and one fact alone—although there are a number of others—is sufficient to demonstrate that his fears are not without solid foundation. This is that an unwholesome and dangerous feature is that policies on risky and old lives are applied for and obtained by persons who have no blood relationship and sometimes do not even belong to the same caste or community and have therefore no insurance interest whatsoever in the lives insured, so much so, that attempts on the lives of the persons insured are feared by the relations. Drastic legislation to deal with this danger appears to be called for.

BURMA CORPORATION.

During the month of September 36,990 tons of ore were mined. 31,850 tons of Ore were milled in the Treatment Plant producing 11,686 tons of Leady Concentrates.

11,501 tons of Lead-bearing material were smelted in the Blast Furnaces, producing 6,381 tons Lead for treatment in the Refinery.

Refinery products were:—

5,880 tons Refined Lead.
495,400 ounces Refined Silver.

Of Silver production 13,780 ounces were recovered from the treatment of Copper Matte.

Experimental Zinc Plant produced 5,298 tons Zinc Concentrates, assaying 8.8 ounces of Silver, 5.5 per cent. Lead, 53.6 per cent. Zinc.

In addition to the above 900 tons Copper Matte were produced from the treatment of accumulated smelter by-products and 7,855 tons Copper Ore.

100 tons of Refined Antimonial Lead and 350 tons Speiss were also produced.

Included in the tonnage of Refined Lead is 316 tons recovered from the smelting of Copper Ore.

INDIAN STORES DEPARTMENT.

The Report on the work of the India Stores Department, London, for 1932-33 records a further fall in the value of purchases as compared with the previous year (1931-32), the value decreasing by 45 per cent. and the number of contracts by 11 per cent. Coming to details, it appears that the number of contracts for stortes and frieght placed during the year was 7,181, as compared with 8,096 in the previous year. The total value was £955,684, which is £778,031 less than the figure for the preceding year. The average value of each contract was approximately £133, which is £80 below the average for 1931-32. The actual expenditure on stores and freight amounted to £1,847,391, a decrease of £1,668,979 from last year's figures.

The decrease is mainly accounted for by appreciable falls in the value of purchases of mechanical transport vehicles and of electrical plant and equipment. In the case of the last-named class of stores the drop is approximately £500,000. This is due to the completion of the programme of orders for the construction of the Uhl River Hydro-Electric Project. The only substantial increase is in respect of demands for explosives.

The report explains that the reason for the continued drop in the number and value of contracts is as described in last year's report, namely, the reduction in budget grants due to the need for economy and the operation of the Rupee Tender rules.

COMPANY REPORTS

JAINTY (CENTRAL) COLLIERY, LD.

Report covers the half-year ended 30th June, 1933.

The Revenue Account shows a profit of Rs. 31-1-7 and the Profit and Loss Account, after crediting a sum of Rs. 5-0-0 on account of sundry receipts, charging thereto interest Rs. 49-0-2 and depreciation Rs. 10,860-9-9, shews a balance at debit of Rs. 10,873-8-4. After adding this sum to the balance standing to debit of Profit and Loss Account as at 31st December, 1932, this account shows a deficit of Rs. 61,727-10-11 to be carried forward.

Comparative figures of Raisings and Despatches for the half-year under review and for the corresponding period of 1932 are set out hereunder:—

	Raisings. Tons.	Despatches. Tons.
January to June, 1932 ...	15,070	15,070
January to June, 1933 ...	13,780	13,886

MARKET REVIEW

MADRAS STOCK EXCHANGE.

(From our correspondent).

The securities market was again active especially for Paper and 1960-70 Loan. The bear covering coupled with a certain amount of investment support lifted the price of 3½ per cent. Rupee Paper to Rs. 88-13 and 1960-70 Loan to Rs. 99-8. The disquieting news about Germany unsettled the markets. 3½ per cent. Rupee Paper fell to under Rs. 88 and 1960-70 to Rs. 98 closing better. Amongst other securities 3½ per cent. 1947-50 was absorbed between Rs. 93-4 and Rs. 93-6, 4 per cent. at Rs. 101-12 and Treasury Bonds at Rs. 106-8. There was practically no business in State loans.

Amongst debentures and preference shares 4 per cent. 1955 Madras Corporation debentures changed hands at Rs. 96-8 and 1950 at Rs. 95-12 with further buyers at the same price. Singareni debentures were enquired for without attracting sellers while Coimbatores were taken up at Rs. 195. Buckingham and Carnatic rose to Rs. 137-8. Tata Second preferences were done up to Rs. 101-8 while Spencer A preferences were dealt in at Rs. 9-8.

Imperial Bank fully paids were done at Rs. 1,225 while the Contributories remained unchanged. Central Banks were taken up at Rs. 23-8. Indian Banks were done at Rs. 91 and Rs. 18-12 for the big and small shares respectively.

Cotton mills were easier. Banglores were taken up at Rs. 82 while Cambodias had a number of sellers at par. Prices may go lower.

There was no business in cement and sugar shares while the tone in sugar shares was easy.

Rubbers were steady. Cochin Malabars were taken up at Re. 1-2 with possible sellers over while rubber plantations investment Trusts had buyers at 26s. Tirumbadis had sellers at Rs. 4-12.

In Teas Periakaramalais moved up to Rs. 32 whilst lack of sellers in other shares hampered business in the miscellaneous section. There were sellers in Burma Corporations and Singarenis with fair business passing. Markets closed with a quiet undertone.

JUTE.

Since reporting last week the jute market has ruled easier and values on balance are lower than those ruling in the previous week. Business in October and Ready Firsts was done at Rs. 24-8 and Rs. 24-4 with small sellers at the decline. Business in loose jute was done on the basis of Rs. 3-8 and Rs. 4 per maund.

As reported last week the long interests are still holding considerable quantity of futures as well as loose jute in the moffussils, in expectation of higher prices; but, so far it has had no visible effffect on the market. On the contrary the technical position is becoming bearish and in the course of the week values have gone down by a rupee per bale.

The continued weakness in American grain and shares market, the uncertain and critical political situation in Europe, have been very disappointing factors and the trade therefore is showing no signs of improvement and unless something unexpected happens dull conditions are very likely to prevail for the time being.

JUTE MANUFACTURES.

In the course of the week, jute manufactures have ruled quiet and values on balance are lower over the previous week. Due to Diwali holidays the market was closed for the better part of the week and business, at the same time, from the overseas market has been very poor. American market has ruled very quiet and the long bull interest is conspicuous by its absence.

Raw jute market has ruled very quiet and had had its weakness reflected on jute goods market. Considering the unusually heavy stocks of heavy goods in Calcutta and the comparatively higher prices of hessians, it appears that a further decline in these goods is likely to take place in the near future. Anyway there seems little chance of any imminent rise in the values of jute goods.

COTTON.

Broach Cotton has remained in the vicinity of last week's quotations, with small day to day fluctuations. Due to holidays very little business has been passing and the market has remained more or less featureless. Hedge sales are being absorbed by longs and the possibility of an amicable settlement with Japan has raised some hope in the local market. The market is likely to rule narrow in the near future.

BULLION.

Gold: The market in view of the decline of Franc-sterling cross rate has ruled easier and values have dropped by 10 to 12 annas per tola. Due to holidays business was confined to small proportions. Stocks and offtake remained unchanged.

LONDON. (Air-Mail Week)

Gold reserve against notes of the Bank of England was £190,376,131 on the 27th September showing no change from the figure from the previous Wednesday.

The substantial amounts of god available in the open market were secured by Continental purchasers. Though till the 2nd price varied only within narrow limits, the sudden depreciation of sterling in terms of the franc which occurred on the 3rd October created a new high record, the quotation per fine oz. being £6-14-8.

Silver: The market has ruled easier and the first settlement is quoted at Rs. 56-4 against Rs. 56-12 per 100 tolas a week ago. China has been a seller. There is no American support to the market. Indian stocks are unusually heavy and the internal demand for domestic requirements is fully met by the sale of distress silver, the stocks thus remaining more or less unaffected. Longs are bull and in some cases over bought. The technical position therefore is more in favour of bulls.

SILVER.

LONDON. (Air-Mail Week)

Till the 3rd October, the silver market in London maintained a quiet and steady tone, without any important price fluctuations. Continent sold as also the Indian Bazars. Support from China was forthcoming as also from America which was inclined more to buy than to sell. But the exchange fluctuations have again restricted business with New York. On the 3rd, there was an easier tendency due to absence of support.

TEA.

Sale No. 18 was held on Monday and Tuesday last. The demand was good and the tone was quieter. 24,000 packages of tea with export rights were offered out of which 20,700 packages were sold at an average of annas 0-9-7 per lb. 10,000 packages of tea and 6,000 packages of dust were sold for internal consumption at annas 0-4-5 and annas 0-4-9 per lb.

Tea for internal consumption had a better market as compared with that for export. For latter purpose Assam Orange Pekoe was in better demand.

The official crop figure for September shows a decrease of 8 million lbs., making a total decrease to 86 million lbs. as compared with last year.

WHEAT.

After ruling very quiet in the earlier part of the week the wheat market towards the close has been slightly steadier. May Beta was dealt up to Rs. 2-14 per md. the closing being at Rs. 3-10.

The long holders of futures in port towns, and the actual 'fits' in up-country centres are more and more inclined to sell rather than hold indefinitely. The liquidation is rather forced upon them due to nervousness in U.S.A. grain markets.

Rains have been plentiful all over and the prospects of the new crop sowings are quite satisfactory. On the contrary the position of the local mills is very disappointing. The sale of flour is very poor and the demand is never up to even the most conservative expectations.

Further increase in European crop estimates is reported and the outlook for this reason is far from confident.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

RESERVE BANK BILL IN SELECT COMMITTEE.

The Joint Select Committee of the Reserve Bank of India Bill will commence their sittings early next week. According to the present programme, the first week will be devoted to a study, amongst the members themselves, of the various sections of the Bill. In the second week, the committee are to confer with representatives of the Indian joint stock banks, exchange banks, Imperial Bank of India, provincial co-operative banks and indigenous bankers. The final selections of the representatives of the banking interests have not yet been decided. We understand that the members of the Committee were invited to send in their suggestions, and we suppose that at the commencement of the next week's sittings, the Committee will finally make up the list of persons to be invited to New Delhi. Meantime, it may be taken as certain that Mr. S. N. Pochkhanawalla of the Central Bank of India and Mr. A. G. Gray of the Bank of India will be amongst the invitees on behalf of the Indian joint stock banks and Sir Osborne Smith and Sir Kenneth MacDonald will represent the Imperial Bank. So far as the exchange banks are concerned, a special difficulty that has been experienced by them was referred to in an important communication sent to us by our London Correspondent and published in last week's number. As a rule, the Indian offices of the exchange banks do not, and are not authorised to, submit any memoranda or make any representations direct. Such action as is taken in these matters is left to the London offices. This being so, there has hardly been any breathing time for the Head Offices of the exchange banks for taking suitable action.

* * *

There has been far too much indecent haste in the programme of work on the Reserve Bank Bill. Even assuming that all correspondence between the London offices and the Indian offices are done by *Air Mail*, the necessary time for interchange of opinions and interchange of relevant documents has not been made available. The people at this end have been hustled to collect all the connected papers, make their opinions in a hurry and forward them post haste. Even so, the London authorities could not have had more than a week to study the views of the Indian officials, consult among themselves, formulate final conclusions and draft the representation. We understand that up to the time of writing, the Government have not received the memorandum of the London offices of the exchange banks. It is doubtful if this week's *Air Mail* will bring in the document. Even if it does, the memorandum has to be printed and circulated amongst the members of the Committee. This means that, at least for the first two days of the discussions of the Committee, the members will have to proceed about their work without any knowledge of the points made out by one of the important interests affected. Nor have the Indian banks, so far as we are aware, finished the consultation amongst themselves and decided on the representation to be submitted. It may be that only by the middle of next week, the views of the Indian banks would be in the hands of the Government. Nor have the various commercial bodies in India finished their study of the Bill and reached the stage when they could put the finishing touch to their representations. It will thus be seen that the Joint Select Committee will be asked to meet on October 23 and begin their discussions without their knowing what the banking and commercial communities think of the Bill. If the members of the Committee have a sense of responsibility—and, we would add, even of self-esteem—we suggest that they should enter a strong protest against the way in which the Finance Member has been seeking to hustle them.

* * *

There is another important aspect. It will be remembered that the London Committee left quite a number of matters to be decided in India. When the Bill was introduced early in September, the Government had not had enough time to make up their minds and formulate their proposals in respect of those matters that had been left over for final decision in India. In the draft Bill that was presented, those matters, on which decision had not been arrived at, were represented in the Bill by clauses lifted bodily from the 1928 Bill. This is what Sir George Schuster said on this topic in the speech which he delivered on September 8 when introducing the Bill in the Assembly :

> "As regards the points which were to receive further consideration—and these include some points which are not subjects for legislation in the Bill, but which will have to be dealt with in separate agreements—we have not had time since my return to give them the full consideration which they deserve, and, moreover, we desired to consider them in consultation with the representatives of the Indian Legislature before we committed ourselves finally to definite proposals. For that purpose discussion in Joint Committee which we intend to propose will afford the suitable opportunity. In taking this line, I do not intend to suggest that the Government desire to shirk this responsibility in these matters. When the time comes for the Joint Committee discussion, we shall be ready to assist the Committee with definite proposals which we, as a Government, are of course best qualified to work out, but we do not desire to commit ourselves at this stage by incorporating definite proposals in the Bill."

The Hon'ble Mr. J. B. Taylor, Additional Secretary in the Finance Department on special duty in connection with the Reserve Bank Bill, was in Calcutta last week and had consultations with members of the Bengal Chamber of Commerce, some of the exchange bankers and the authorities of the Imperial Bank. It is quite possible that his visit was connected with the elucidation of the matters on which the Government have now to formulate their views in time for submission to the Select Committee. One of the important matters left over for a later decision was the agreement between the Imperial Bank and the Reserve Bank. It is obvious that the agreement that was suggested in 1927 would be modified to a fairly considerable extent in the new conditions prevailing to-day. So far as the exchange banks and Indian banks are concerned, they are vitally interested to know what the new terms to be offered to the Imperial Bank are likely to be. In fact, one of the main points, which the other banks will have to consider, is this: How is the agreement between the Reserve Bank and the Imperial Bank to be devised in a manner that will not result in the Imperial Bank becoming too formidable a competitor in the banking world? This question is one of life and death to the banking institutions. A good part of the representations of the latter will have to deal with the agreement in respect of the agency to be given to the Imperial Bank. Now, the banks do not know what the revised terms of the agreement are to be. In other words, the banks are asked to submit their views on a Bill in regard to which the nature of an important schedule has not yet been made known. It is bad enough that the banks are not given sufficient time to prepare their memorandum. The handicap under which they suffer is increased a

hundredfold when they are asked to state their views without full knowledge of one of the main features of the Bill.

* * *

Let us return to the Committee's work. The memoranda of the various banking interests, and the commercial bodies would not be in their hands till two or three days after the commencement of their sittings. The views of the Government on a good few points will be known to them, for the first time, only after the Committee commence their deliberations. In regard to these new details, the members will not have time to consult the affected interests of the country. Such memoranda as are submitted would be drawn up without the drafters thereof being in full possession of the full proposals of the Government. The public are thus prevented from stating their views on the proposals in their entirety. The first week of November will be devoted, we expect, to the conference with the representatives of the banking interests. We do not know whether any other witnesses or experts are to be invited to confer with the Committee. In any case, the Committee will have to conclude their labours by November 11, as the Assembly will be meeting on November 13 and the Joint Select Committee's Report will have to be laid on the table on that date. The shock tactics adopted by the Government are not calculated to enable the public to give careful and proper consideration to a Bill which, the Finance Member assured us, "is attracting wide attention outside India, and the eyes of many countries will be on these proceedings."

"WHITHER INDIA?"

The future of human civilisation, into which we endeavoured to peep by way of reviewing Mr. H. G. Wells' epochal work has, perhaps, less riddles and perplexities than the future of Indian politics. A year or two ago it might have been possible to envisage political life in India in the next decade or two as a tussle between the Government and the Congress with the inevitable vicissitudes in the fortunes of either. It is true there was a third factor, namely, the communalists; but with a little optimism, not altogether unreasonable, one could well imagine a progressive disillusionment among the communal leaders and their diversion to the ranks of extremism or moderation. In such a view a forcing up of the pace of reforms and a gradual adjustment of conflicting interests would seem a natural development; and there would be little or no reason for grave alarm at future prospects.

* * *

But the practical extinction of the Congress in the form in which it figured in recent politics, the abandonment of civil disobedience and the impossibiliy of reviving it have created in our politics a serious *impasse*. The new constitution outlined in the White Paper leaves no room for mistake as to its true nature or the scope it affords to the leaders of the nation for constructive work. On the other hand, the forces of nationalism have been weakened and distracted beyond repair. And one cannot be hopeful about the automatic rise of a nationalist party in the new councils; for, in the absence of any vigorous efforts to fight the elections and drill the legislators, the councils are bound to be the hot bed of communalist wire-pulling. What are the prospects of the formation of a nationalist party, which could secure and enlarge its popular following, arrest the growth of communalism in the councils and the country, and stem that tide of reaction on the crest of which the Government seeks to ride to yet more power?

* * *

The Congress, which showed itself capable of great things in the past, is not in a state in which it can address itself to this task. The abandonment of civil disobedience has destroyed its prestige. The Government have shattered the organisation. It has no resources either in men or money; its leadership is dispirited. Its programmes are not calculated to sustain the following which they inspired at the beginning. It is obvious that the Congress, in the sense of a nationalist party, will have to reorganise itself before it can attempt any definite task.

* * *

Re-organisation is obviously a question of leadership and programme. There are times when the personality of a leader can muster support round any apparently fantastic programme. When non-co-operation and triple boycott were first propounded by Gandhiji, leaders, old and young, openly laughed at the idea. And yet, within a few years it was strong enough to call for the concentration of all the attention of the British Government. But now the movement has run its course. And whether or not the movement can do good to the country, if it were revived, is of no practical importance. For the country has proved itself unequal to its demands; and in that sense, if no other, the country has tired of the civil disobedience movement. The Mahatma's political prestige is apparently under an eclipse. There can be no question of his agreeing to work a programme which is in any respect opposed to the political principles he has during these years formulated for himself. The country, too, does not expect him to.

* * *

In these circumstances, the search for a policy is largely the search for a leader. The moot question of whether a policy is the making of the leader, or the leader is found to work a generally agreed policy may be disregarded. We have to take the leaders and the facts of our political life as they are. The discussions in the daily press invariably refer to the formation of the Swaraj Party by Pandit Motilal Nehru and Mr. C. R. Das, when Gandhiji's non-co-operation had met with a severe check and setback. It is still debatable how far the formation of such a party was due to the personal magnetism, which the two leaders undoubtedly possessed in some measure, and how far conditions in the country were inevitably tending to such a development. And in any examination of the present position it must be remembered that there is little use in repeating the platitudinous and, for all practical purposes, incorrect, saying about history repeating itself. C. R. Das and Pandit Motilal had the entire framework of the Congress to work on; and if Gandhiji was not an active supporter, it only tended by its suggestion of equality of status of Mr. Das and Pandit Motilal with Gandhiji to enhance their prestige in their country.

* * *

The salient features of the present situation may be summarised thus: Firstly, the collapse of the civil disobedience movement has destroyed the morale of the new class of political workers whom Gandhiji brought into the field.

* * *

Secondly, it has destroyed the organisational framework of the Congress; and those who would like to repeat the performance of Nehru and Das are faced with a dilemma. To revive the Congress is to provoke repression. Not to use the name of the Congress would mean that the new organisation takes a long time to enlist the necessary popular support.

* * *

Thirdly, Gandhiji has during the last few years thrown everyone, except a few, who were closely identified with him, into obscurity; and it may be said that unless one of his chief lieutenants abjures civil disobedience and tries to rally the forces round a programme akin to that of Das and Nehru, there is little chance of reconstruction on the old familiar

lines. Though it is months since the Congress organisation was disbanded we have not had any signs of effective leadership. Mr. Jamnadas Mehta at Bombay, Mr. Satyamurthi at Madras, a few amongst the reputed "Big Five" in Bengal, these have issued statements. Some of them have more to say in condemnation of Gandhiji than by way of constructive suggestion for a new party.

* * *

For our part, we are inclined to believe that we are in for a period of further fragmentation of our political life. Communalism started the trend; the White Paper, by accepting the demands of communalists, has increased the importance of local politics. Bengal has little thought for the politics of All-India. Madras has its own internal troubles. Bombay has its own obsessions. Inter-provincial feelings and jealousies have been awakened of late. If Provincial autonomy, even as it is proposed in the White Paper, should prove sufficient to satisfy the love of excitement and distinction of our politicians, the larger national life may conceivably languish for some time to come.

* * *

The first challenge to these unwelcome tendencies has come from Pandit Jawaharlal Nehru, in the shape of a series of articles in the Press entitled "Whither India?" We have seen and perused with great care three of the articles; and we do not know whether there are more to come. The initial feeling is one of disappointment that Pandit Jawaharlal holds out no promise of rescuing our politics from the present deadlock. And it is only justice to the Pandit to say that his articles are a defence of any charge that may be brought against him on this account. To address oneself to the immediate task involves an acceptance, to some extent, of present conditions and trimming one's ideals to suit the circumstances of the hour. Reconstruction of the Congress, with a view to its functioning in the Councils, would mean that the leaders of the Congress would have to revive all the old alliances with cotton millowners, zemindars and other restricted interests, alliances which in the past had proved to be inimical to the cause in the long run. It was formerly supposed, and naturally, that if a measure of political freedom, could be won, whatever the means and tactics employed in the effort, that freedom would be utilised for achieving those ends for which alone a democratic institution like the Congress could justly work for.

* * *

Now that Congress has met with a severe check, Pandit Jawaharlal may well argue to himself, this spell of forced inactivity must be utilised for thinking out our plans and policies down to the very fundamentals.

* * *

What are we driving at? Freedom? Swaraj? Independence? Dominion Status? Again, whose freedom are we particularly striving for?—These are perplexing questions which Pandit Jawaharlal has raised before himself and the country in a situation which is already charged with perplexities. The Pandit gives short shift to those—unfortunately not too few among publicists and public men—who seek to answer problems of political philosophy with catchwords. He dismisses in a few trenchant, but apparently somewhat dogmatic, sentences, the whole idea of nationalism and the solidarity of national interests.

* * *

Nationalism can only help us to realise the essential conflict of interests between India and Great Britain and see through the latter's profession of solicitude for the masses of the country. Beyond that, it is of little use to define the purpose of national endeavour. Within the country.

> "What is needed for the Indian Prince may be thoroughly bad for the people of his State, what is profitable for the zamindar may ruin many of his tenants, what is demanded by foreign capital may crush the rising industries of the country. Nothing is more absurd than to imagine that all the interests in the nation can be fitted in without injury to any."

At every step, says Pandit Jawaharlal, some have to be sacrificed for others.

> "We cannot escape having to answer the question, now or later, for the freedom of which class or classes in India are we specially striving for? Do we place the masses, the peasantry and workers, first, or some other small class at the head of our list?"

And his answer—and who, who knows the Pandit, cannot guess it!—is:

> "Let us give the benefits of freedom to as many groups and classes as possible, but essentially whom do we stand for, and when a conflict arises, whose side must we take? To say that we shall not answer that question now is itself an answer and taking of

sides for it means that we stand by the existing order, the 'status quo' ".

The logic of all this is unimpeachable. There can be no question that vested interests have not been very helpful to the attainment of political freedom. And as regards the future, the worst feature of the White Paper is its addition to such vested interests and, what is more, giving them a firm foothold in the new constitution. Such interests are bound to prove even more unhelpful in the future. This cannot be questioned. And even more unquestionable is the contention of the Pandit that there can be no worthy object of national endeavour other than the uplift of the masses.

* * *

What is important, however, is the way the Pandit seeks to achieve this object. His articles throw little light on this. Nearly a column is devoted to the denunciation of the neglect of the average newspaper in India to the doings of the world abroad. And far the greater part of the three articles is devoted to an exposition of the present paradox of poverty in plenty. It is common knowledge that the depression is the most potent weapon in the armoury of the socialist; and Pandit Jawaharlal, like other socialists, has wielded it to great effect.

* * *

By the side of his denunciation of capitalism, the criticism of the Pandit's views which has already appeared in the Press is a mere puerility. The author of that criticism has evidently neglected the study of the theory of socialism or communism ; or has failed to grasp its core. The term "capitalist," he believes, is a relative term, expressing the material possessions of one compared to those of another. He goes so far as to suggest that even an official of the future Swaraj government on a salary of Rs. 500 per month must be classified as a capitalist, as the capital value of an annual income of Rs. 6,000 comes to a lakh and a half. And so merchants, doctors, lawyers, all are brought within the capitalist class till none is left out. This *reductioad absurdum* is ingenious. But the reasoning is itself based on an absurd assumption. A wealthy man may be reasonably presumed to have capitalist sympathies. But whether a man is a capitalist or not depends not upon the extent, but the nature, of his wealth. When a man's property is a factor of production and the system of working it enables him to appropriate the fruits of other men's labour, only then is he called a capitalist. When a man is called a capitalist there is no condemnation of him as a man which is necessarily implicit in that appellation.

* * *

The difficulty of all socialist doctrines are that, if they are stated in simple terms, they seem absurd; and if they are stated with a regard to accuracy, they become incomprehensible. The theory of socialist economics is lamentably abstruse ; and socialism has grievously suffered for it. Most people miss the point of its criticism of capitalism; and on the constructive side it is itself comparatively weak. People waste powder on the critical side of socialism, when its constructive suggestions so clearly invite attack.

* * *

It is relevant to the issues raised by both Pandit Jawarharlal and by his critic that we take stock of the position in respect of Socialism *versus* Capitalism.

It is well to recognise that modern economy and modern economic thought have progressed to the point at which the traditional defence of capitalism is both futile and unwanted. The average economist no longer denies that man cannot accept, of his own choice, an economic system which by the scope it offers for private profit must inevitably silt up the channels of consumption. For it tends to render economic society top-heavy, precipitates crises which can no longer be self-curative, complicates problems and endangers life at every point. Of this, there can be no question. And it is no defence of such a system to say that "capitalists have functioned for service." For our part,—and there are passages in Pandit Jawaharlal's articles to suggest that he agrees with us—there is more to be said in favour of capitalism, as it functioned in the past, than of capitalists who have the wars of the last century to their lasting discredit.

* * *

While the capitalist will do well to recognise the force of the criticism against capitalism, socialists like Pandit Jawaharlal should properly appraise the dangers in finding a substitute. The Pandit, judging from the articles under review, would seem to be a believer in the somewhat outworn theories of the class war. It is well to recognise that there are two distinguishable ideas connected with the term class war. One is the assumption that there is an irreconcilable conflict of interests between the classes and the masses and that, based on the conflict, there is a conscious antagonism keenly felt and bitterly pursued. The other is that by intensifying the class war and establishing the dictatorship of the Proletariat, we might reach the stage of classless society and equal good of all. This is the orthodox communist theory. But thinkers, who are above board in respect of leanings towards any one section of the people, have come to recognise that, though the conflict of interests is real, it is neither keenly felt nor bitterly pursued. Nationalism of the last half century has destroyed the internationalism of the average worker. And the history of labour during this period has shown that the worker is not more willing to sacrifice his immediate interests for the common well-being than the capitalist. The experience of Soviet Russia is that the small peasant is a more implacable enemy of the communist state, than those who may be called *bourgeoisie* in status and mentality. If bourgeoisie and proletariat are alike intractable, the whole question is reduced to one of a choice of tyrannies, which is no choice at all. The class war, therefore cannot be fought to the finish. It can only aggravate the dislocation and change the transition into an interminable flux.

* * *

To establish an economic order more orderly than capitalism, more enterprising than private enterprise, society has to accomplish two tasks, which are, no doubt, interrelated, but which are, nevertheless, distinguishable from the standpoint of the reformer, even if he be a revolutionary. One is the problem of equipment and organisation. The other is the education of all classes, in a way that each man would be a worthy citizen of a communist state. Neither of these would be helped by bitter class warfare.

* * *

Taking the case of India, the Pandit would, we believe, hardly need to be reminded that equipment and organisation would be gravely endangered, if Indian industry were to work under the threat of orthodox communism. The class war would only add to the internecine feuds that are already rie in this country; and the hope that communism might prove to be an antidote to communalism and bring about the solidarity of the masses is too forlorn to form the basis of any practical policy. We believe that without, on the one hand, bringing about the solidarity of the masses, on the other it would disintegrate the intelligentsia who, in spite of all that has hapened till now, must remain the spear-head of any national movement in India.

* * *

We thus return to the point at which we started, that Pandit Jawaharlal has failed to answer the immediate needs of our national life. What we require now is the reconstruction of the morale of our public life. We are afraid that in the absence of a well-led nationalist party the country would be at the mercy of sectional politicians and self-seeking adventurers; that the political life would be shut up in small provincial compartments ; and that conditions would be ideal for the futherance of all manner of vested interests. We wish to impress on Pandit Jawaharlal that it is just as easy to sacrifice the immediate good in a heedless pursuit of the distant ideal and lose both, as to lose sight of the end in undue deference to present conditions. What we need is a people's party popular, influential, able to withstand every encroachment on the public weal, from vested interests either here or from abroad.

* * *

And Pandit Jawaharlal is the one person in India to whom the mass of public opinion has turned in hope. And if the reason for disappointment is the Pandit's wistful look at a distant communist ideal, one is tempted to taunt him with the suggestion that he is unconsciously endeavouring to cover up his inability to tackle the immediate tasks. We count ourselves among the reasoned advocates of economic equality. But we wish to urge on the Pandit that communism is more deeply woven in the web of destiny than many of us individualists or socialists, care to admit to ourselves. It should be sufficient for the Pandit that the tasks suggested by traditional nationalism are not without their place in the march to his ideal. If he could marshal a solid nationalist party and preserve his love for the masses intact, he could do more for the cause he has at heart than if he were to commandeer a class war of the orthodox communist type. The danger in India to-day is that, as soon as the reformed constitution is brought into being, there will be a bid from all quarters for the control of the majority in the Legislature. That majority belongs, as of right, to the people. And if a leader like Pandit Jawaharlal were to throw away the opportunity of leading such a party, it is certain that it will fall into the hands of those who have definite sectional ends for which to use it and know how best to use it for such ends. From this predicament, every leader of broad sympathies has a duty to save the country. Will Pandit Jawaharlal fail us?

CAN IT BE TRUE?

In our last week's issue we gave special prominence to a communication of our London Correspondent in which he gave an indication of what London thought of the Reserve Bank Bill. In the same letter, he gave the following information:

> "Another report—no rumour, let me emphasise again—is that Sir Howard Denning is to be appointed the first Governor.
>
> Denning stock is at a high premium both in Simla and Whitehall.
>
> But Denning Stock will not command any price in London city.
>
> Sir Howard may know the Secretariat technique. He is ignorant of banking and market technique. He is a stranger to the work and practice of central banking.
>
> His appointment would cast a serious slur on the bonafides of the Indian authorities."

Of Sir Howard's efficiency, keenness and sturdy understanding, *Indian Finance* is in a position to speak in the highest terms. If we had a bone or two to pick with him during his official career in India, it was because we felt that he was the kind of person who had a closed mind; who knew well what he knew; but who thought that all that was to be known was what he knew. He had essentially, the Secretariat mentality and outlook; but what the Reserve Bank requires in its Governor is not one who can run an office efficiently or prepare comprehensive memoranda. We want one who is himself a banker and who has a thorough knowledge of domestic and international markets. These are qualifications which Sir Howard does not possess. We have not the slightest hesitation in stating that a more unwise selection could not be made. In this connection, we recall to mind the sage words which Mr. J. M. Keynes had written in his note on the Central Bank, appended to the Chamberlain Commission report. The following passage from Mr. Keynes' note is most apt in this context:

> "It may be added in this connection that the Governor and Deputy Governor of the Bank should invariably be persons of commercial or banking, not of administrative or official, experience, and should be appointed, so far as many be possible or convenient, from the staffs of the Presidency Offices. (The three Presidency Banks). Though it would not be wise to lay down any rule or principle on the matter, and while it might be an advantageous thing to introduce from time to time officers whose banking experience had lain elsewhere, the Governorship of the Bank should be a position to which the leading officials of the Presidency Offices could reasonably look forward as a possible prize. It might, perhaps, increase public confidence in the non-official character of the Bank's management and in the Government's intentions, *if it were definitely laid down that members of the English or the Indian Civil Service were ineligible for appointment os officers of the Bank.*"

We suppose that, for the first few years at least, the Government would suggest that a kind of Liaison Officer should be appointed whose business would be to be in touch both with the Finance Member and the Reserve Bank authorities. The Finance Member will have to nominate an official to the Reserve Bank Board; but he could not nominate the Controller of the Currency because there would be no Controller of the Currency after the Reserve Bank is started. He could not nominate one of his secretaries or under-secretaries for the simple reason that the latter would be in far off Delhi or Simla. We should also suppose that in regard to such questions as the issue of new loans, remittance programme etc., the Government will not leave these details entirely to the discretion and management of the Reserve Bank but retain for themselves a substantial voice. For this purpose, that is, contact between the Finance Department and the Reserve Bank, representation of the Finance Department on the Reserve Bank Board, interpretations of Government's policy in regard to new loans and remittances, the Liaison Officer would find a place cut out for him till the Reserve Bank has worked for a number of years and created and perfected the machinery in respect of dealing and consultations with the Finance Department. We should not be understood as supporting the case for a Liaison Officer. All that we mean is that we shall not be surprised if such an appointment is created. During the past five years, we have seen appointments of this nature created without reckoning the cost. Sir Basil Blackett had to deal with the recommendations of the Taxation Enquiry Committee, the Economic Enquiry Committee, the Hilton-Young Commission, the separation of Railway Finance from General Finance, the separation of Audit from Account and various internal reforms. He did not allow himself the luxury of additional secretaries and special officers. In the present regime, an additional secretary is the rule rather than the exception. An

under-secretary was able to do all the special work connected with the Reserve Bank Bill on the last occasion—when the work was of a far heavier and far more complicated nature. On the present occasion, the officer on duty is of the rank of a secretary. In various other ways, too, expansion of staff has been effected in a way that suggests that we should be prepared for the proposal of a Liaison Officer. Well, if Sir Howard Denning, a former Controller of the Currency, is to be the Governor of the Bank and if the present Controller of the Currency is to be the Liaison Officer, we ask whether there is any difference between the new conditions in which a Reserve Bank will be in charge of the management of currency and the present conditions in which currency is managed departmentally. What is wanted in our currency affairs is the banking outlook, the banking touch and the banking psychology. We shall not have these if our London Correspondent's report turns out to be correct.

RURAL UPLIFT

In the Conference of His Excellency Sir Frederick Sykes with the ruling princes and Chiefs of the Bombay Presidency, a faint echo is audible of the point we urged in our last comment on Sir Frederick's scheme of rural uplift. We urged that, apart from the more technical aspects of the problem, there is the primary difficulty that the rural areas have been denuded of their traditional leadership and that, if we are to make headway with any programme of reconstruction, we must contrive to create a class which can easily gain in influence and at the same time be imbued with the ideal of service to the dumb masses. The Chief of Anudh urged in his speech at the Conference that it is regrettable "that pensioners of the State, speaking generally and not referring to Aundh particularly, always preferred to live in cities when they retire" and that "it should be made compulsory for them to retire in their villages where their knowledge in the work of village improvement would be very useful." While we welcome this recognition of the need for investing our rural areas with the ability and experience, which in their present state they lack, we are constrained to observe that pensioners in the evening of their lives could do little good to the cause we have in view. We have ourselves had occasion to watch the contribution which such pensioned officers are able to make to the life of the villages in which they choose to settle for their retirement. In most cases, they are inclined to dote on the little possessions they have acquired and to keep themselves within a small circle of friends, either out of a lofty scorn for the rustics, or out of a desire not to be embroiled in the petty factiousness, often found in village parts. It would, no doubt, be a great asset to rural life, if men, who have well provided themselves by years of toil command sufficient enthusiasm and vigour to take a creative part in rural affairs. Such interest of retired men is not visible either in the parochial or in the larger national life. We do not see how the rural problem can be tackled with any hope of success without taking measures to assure ourselves of the proper personnel to conduct such a vital movement.

* * *

Another interesting point raised in the course of the discussions at the Conference was in respect of rural indebtedness. It is interesting that the emphasis on this question was also laid by the same Chief of Aundh. What the Chief had to say in favour of measures for abolishing rural indebtedness might be guessed by anyone who has given a little thought to the question. And it is really discouraging that in his reply to these points Sir Frederick Sykes had nothing more to say than that the pressure of public opinion must be brought to bear on individual villagers in order that they might not incur uneconomical and wasteful expenditure. We doubt if Sir Frederick has even stopped to think of the psychology behind this conduct of the village cultivator. Though the point is often mentioned in other contexts, it has a really close bearing on the question on hand: that the outlook of the Indian villager is more completely fatalistic that you can come across all the world over. Born with debts, living under debts and leaving a load of indebtedness on his heirs at death, the horizon of the cultivator's outlook is ever limited by the walls of a civil jail. There is little or no incentive to explore the ways by which he could become a free man. It is up to the state to show him the path to freedom from indebtedness. Sometime ago, when the co-operative credit movement was first introduced into India, it was fondly hoped that the co-operative societies might succeed in teaching the Indian villager the invaluable habit of thrift. But the Indian villager stubbornly refused to acquire that habit for the patent reason that the

CAST IRON PIPES
for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5" to 20" diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

Clive Street Gossip

Whether or not the Assembly members will put up with all the rushing and pushing to which they are subjected over the Reserve Bank Bill, I, for my part, have a special cause for feeling sore. As soon as the Parliamentary Paper on the Reserve Bank was published, I made up my mind that *Indian Finance* should devote a special Supplement to this matter which is of so far-reaching significance. When the Reserve Bank Bill was introduced in the Assembly, I was in Simla and I was able to gather a large number of important data and relevant papers. In preparing for the Supplement, I have myself been feeling the strain of all this hustle intensely. The final form of the Supplement is far bigger and more extended than the original intention. We are publishing a large mass of literature which should be of great help to those who have to make a study of the proposals in relation to earlier discussions and in relation to the contemporaneous position in other important countries. It was our object to bring out the Supplement in time to enable the Select Committee members to have the copies before they started their deliberations. I regret that it has not been possible to complete work this week; and the Supplement will, therefore, be issued next Monday or Tuesday. Meantime, I may, usefully, describe, in simple terms the views we have advanced in the Supplement. The discussions may be divided under the following heads:

1. The question of the standard.
2. Does India want a Reserve Bank type of central banking institution or a Central Bank of the British or Continental type?
3. Shareholder Bank *versus* State Bank.
4. If the Government cannot see their way to accept our proposal in this regard, what are the modifications to be made so as to reduce to a minimum the harmfulness of a shareholder plan?
5. So far as the business which the Reserve Bank may transact, what are the modifications necessary so as to ensure that the Bank will not be competing with member banks and that the Bank will be able to render suitable assistance in the matter of the development of agricultural bills?
6. Composition of the Reserve with special reference to (*a*) the existence of silver notes in circulation and (*b*) the large external commitments of a recurring order, provision for which would be difficult in a year of adverse trade balance.
7. The necessity to press the question of ratio on the present occasion.
8. Agreement between the Reserve Bank and the Imperial Bank.

* * *

1. So far as the standard is concerned we agree that, in the present circumstances, we have no other alternative than to work on the basis of a sterling exchange standard. But the preamble to the Bill suggests that steps for a more permanent system would be taken on hand when world conditions come to be more settled. Can we put any faith in this assurance that the Government will initiate, of their own accord, measures for the permanent monetary system when international conditions have cleared up sufficiently? The past currency history of India does not encourage us to have any great hope in this regard. The Fowler Committee recommended that India should have a gold standard with gold currency. No action was taken. The Chamberlain Commission recommended that India should be given a currency which the people want. No action was taken. The Babington-Smith Committee recommended the two-shilling ratio. Immediate action was taken. The Hilton-Young Commission suggested the 18d. ratio. Again, immediate action was taken. That is, whenever wholesome recommendations were made for a satisfactory standard for India, the Government showed utter indifference. Whenever recommendations of an unwholesome nature were made, the Government showed indecent haste in carrying them out. In view of this attitude of our authorities towards the question of standard, can we be more hopeful about the future? Let us turn to recent events. Since England went off the gold standard, she has strengthened her gold stocks enormously. Since India divorced her currency from gold, she has exported gold to an amount equal to what England has gained in the same decade. Britain has been actively taking steps to facilitate her transition from the present stage to the status of gold standard. India has been content with a policy of drift and inaction. We would like to know from the Government whether the assurance in the Preamble means something more than adherence to the same policy of drift and inaction.

2. The Central Bank of most of the leding countries of the world are a Bank of Issue, a Government's Bank and a Bankers' Bank but not a Reserve Bank. Among the important countries, it is only the United States of America that has got a Central Bank that is a Bank of Issue, a Government's Bank

and a Bankers' Bank. What is the necessity for India to borrow this particular feature from America? And, curiously enough, our authorities have not borrowed all the features of the Reserve Bank system but only one feature, namely, compulsory deposits from member banks. But banks are not given the option to decide whether they should become members or not. It is forgotten that India is the last country suited for the Reserve Bank type of Central Banking Institution. On theoretical grounds, therefore, there is no justification whatsoever for the provision that member banks should maintain in cash with the Reserve Bank specified percentages of their time and demand liabilities.

* * *

On practical considerations, the objection becomes a hundredfold stronger. In order to pay up the cash necessary for deposit with the Reserve Bank, the member banks will have no alternative, in most cases, than to sell government securities. This means that situation would, shortly, arise in which every bank would be a seller and no bank a buyer of securities and the securities thrown on the market for sale would be of the order of Rs. 10 crores. This might well result in an unparalleled crisis in the giltedge situation. In keeping a substantial portion of their assets in the form of cash in the Reserve Bank, the banks will be losing a good part of their earnings. In any case, Indian banks at least will be obliged to reduce their dividends. This will cause considerable nervousness in the minds of depositors and shareholders. The Reserve Bank is intended to strengthen giltedge and the credit of the Government; it will actually disrupt giltedge and the Government's credit. The Reserve Bank is intended to strengthen the banking system; it will actually result in weakening the banking system. Is it at all wise for the Government to insist on a provision which does not exist in the charters of most of the leading central banks of the world and which will have the effect of causing great harm and embarassment to the giltedge market, the banking world and the Government themselves?

3. So far as the Assembly is concerned, the fact is that, on the earlier occasion, it passed the Reserve Bank Bill to the extent of seven clauses. As clause four pertained to capital scheme and provided for a State Bank, the Assembly has virtually set its seal on the plan of a State Bank. Sir Purshottamdas Thakurdas, Sir Pheroze Sethna and Mr. A. Rangaswami Iyengar were members of that Assembly. These gentlemen and such other members of the present Assembly as took part in London deliberations owe it to the public to explain why they did not stick up for a scheme which has been so authoritatively supported and so universally endorsed. The Central Banking Enquiry Committde, presided over by Sir B. N. Mitra who has always enjoyed the confidence of the Government, universally recommended a State Bank. The Government owe it to the public to explain why they threw overboard a scheme sponsored by one in whom they had and have such implicit confidence. We have strongly urged the careful consideration of the Stockholder's Scheme which was put forward in 1928 as a compromise between Sir Basil Blackett and the Leader of the Opposition. The local bodies provided in Sir George Schuster's Bill are only an emaciated edition of the Electoral Colleges provided for in the Stockholders' Scheme. From every point of view, the Stockholders' Scheme must be considered as a most satisfactory *via media* between a State Bank and a Shareholder Bank.

4. If this scheme is not given due consideration, we suggest various modifications so as to ensure that the Bank cannot be got possession of by political or sectional or communal or regional or provincial or any other vested interest. Speaking in the Assembly, Sir Basil wanted a Board "of capable and businesslike men, of wise and mature outlook, fully conscious of their immense responsibility, a Board with full and sympathetic understanding of Indian requirements and widely representative of India as a whole, a Board which will devote itself wholeheartedly and in single-mindedness to the business of making a success of the control of currency and credit in the interest of India, a Board which will be Indian in outlook and largely Indian in composition." The suggestions we make are to ensure a Board of this kind.

5. In our consideration of the business which the Bank may transact, we have taken the view that the Reserve Bank should have no dealings with the public or banks outside the schedule banks. It is axiomatic that the Central Banking Institution should not compete with the member banks.

6. The Bill provides for an external reserve of a minimum of 40 per cent., with the stipulation that the initial external assets to be handed over at the time of the inauguration of the Reserve Bank should be 50 per cent. There are two considerations to be borne in mind in this connection. The first is that not only the holders of the paper notes but the holders of the silver notes can tender their notes and demand payment in sterling. The external reserve should therefore bear a proportion not only of the paper notes in circulation but to the total of the paper notes and silver notes in circulation. From this point of view, the external reserve now provided is totally inadequate. In these years when our surplus on merchandise account has been dwindling so speedily, it is of the utmost importance that the currency reserve should be able to stand up to a year when we may have an adverse balance of trade and the currency authorities will have to provide for the Secretary of State's requirements as well as for the requirements of the private remitters. The minimum provision needed for these two purposes is £50 million. In the result, we suggest that the external reserve should consist of 35 per cent. as minimum plus the equivalent of £50 million or nearly Rs. 130 crores. We have already got Rs. 83 crores in our possession. The balance to be made up is Rs. 47 crores. Rs. 22 crores is contributed by the secret reserve available in our gold stocks which are now valued on the basis of Rs. 21-3-10 per tola. A further Rs. 10 crores can be made available from the Home Treasury. The balance of Rs. 15 crores is to be arranged by a gold loan from America against an earmark of our surplus silver. This last proposal will, at one stroke, solve India's gold problem and the world's silver problem.

7. There is no case for postponing the consideration of the ratio question. Our friends who suggest that this is a matter for the executive forget that the executive in India do not easily take action of this kind when action is warranted. The urgent problem for India—in fact, for the world—is the raising of prices. The only way for raising prices is the devaluation of the rupee. We may quote Sir Basil Blackett against the Blackett ratio. (See his book, *Planned money*). If Sir Basil were the Finance

which is altogether an extraneous element in the Reserve Bank Bill as it now drawn up.

The exchange market has been dull and inclined inclined o give way. There were sellers this morning at 1s. 6 1/32d., but, towards the evening, they disappeared. On the weekly tender day, no applications were received.

The closing rates are : 1s. 6d., October-December T. T.; 1s. 5 31/32d., January-February T. T.; and 1s. 5 15/16d., March-April T. T.

Bills may be quoted : 1s. 6 7/64d., up to December though there were some banks willing to buy at 1s. 6 3/32d.

Call money was easy at ½ per cent. Onemonth, twomonth and threemonth deposits may be quoted 1,1,1¼ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(*By Wire*)

Madras, October 19, 1933.

Exchange rates have fallen away during the week and the decrease in the gold shipment is no doubt largely responsible for the easier tone of all markets. Business has been somewhat restricted owing to holiday and at the close banks are not quoting better than 1s. 6 1/32d. T. T. for October, 1s. 6d. November-December and 1s. 5 31/32d. January-March. The export market is still extremely dull and practically no bills have been offering in this market.

Money has been in moderate demand and interbank transactions are reported at 1 per cent for call.

(*Continued on page 971*).

beneficiary of any thrift on his part was not himself but the *mahajan*. To-day we recognise that the cooperative credit movement, far from making any progress, must end in irremediable failure, if the villager cannot be brought to lead a life that would satisfy the ordinary criteria of economic living. If that were so and if the beginning of any system of rural reconstruction is the removal of the load of rural indebtedness, then is it not incumbent on the enthusiasts in this cause to devise ways by which the cultivator can throw the heavy weight of indebtedness?

* * *

It was suggested by the Royal Commission on Agriculture that what was needed by India is the enactment of a special rural insolvency law which simplifies the usual procedure in the case of insolvent cultivators and that a roving commission should take the benefits of such legislation to the very door of the cultivator. It is, we believe, unnecessary to urge here that the expeditious working out of the insolvency law through the agency of a roving commission involves no injustice to any section of the masses. For, in any case, the debts owed by a cultivator are are not likely to be repaid and in the present depression, when prices have gone so low, repayment is an utter impossibility. Rather than keep a relation, which is to the deteriment of the debtor and creditor alike, it were well that the suggestions of the Royal Commission on Agriculture were acted upon and the cultivators of the soil relieved of their indebtedness, but assured of the continued possession of their agricultural holdings. We wish Sir Frederick Sykes, who has recently shown unmistakable signs of enthusiasm in the cause of rural uplift—despite the fact that by taking up this question at this stage of his regime he has exposed himself to the taunt of muttering the name of the Lord on the death bed (to translate that common vernacular saying)—could exert himself to see that the establishment of such an insolvency commission is expedited.

(*Continued on page 974*).

Member to-day, he would have no hesitation in scrapping the eighteenpence ratio. If we do not make this alteration on the present occasion, this will be the perpetuating of this parity for all time.

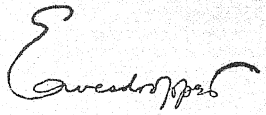
8. The agreement with the Imperial Bank must be modified on the following lines:

(*a*) Instead of an interest-free deposit of Rs. 3 crores in the first five years, we suggest a lump payment of Rs. 9 lakhs in the first, Rs. 6 lakhs in the second, and Rs. 3 lakhs in the third, five-year periods.

(*b*) The Imperial Bank should be authorised to use the currency chest for its own internal remittances and also for providing internal remittances to member banks at par.

(*c*) The Reserve Bank must maintain a list of approved banks. The approved banks must be confined to banks registered in India and specifying certain minimum requirements of paid-up capital and reserve, which should be not less than Rs. 60 lakhs. The Banks should satisfy the Reserve Bank of their clean balance sheet position. If any bank on the approved list starts a new branch in any centre where no approved bank has a branch, it should be given interest-free deposit of Rs. 3 lakhs for five years by the Government. If the Government desire really to encourage branch banking development, this is a recommendation which they should have no hesitation in accepting.

(*d*) If the Imperial Bank is able to persuade the Government to the changes that we have suggested, we would not insist on the approved banks having the right to secure, by tender, the agency work of the Reserve Bank. We shall have, in that case, no objection to the Reserve Bank appointing the Imperial Bank as sole agent. Our acceptance of this sole agency is subject to the Government agreeing to extend some manner of assistance to the deserving Indian banks in a way that will enable them to enhance their prestige in the eyes of the public. The interest-free deposit to be given to new branches is a kind of contact with the Government which should be of great value to the sound Indian banks to make headier progress in the future. I made this suggestion before the Banking Committee; and they indicated their approval.



IN TIMES OF DEPRESSION

A Life Assurance Policy should never be sacrificed. Valuable as it is at all times, its value is enormously enhanced in times of trade depression, with consequent falling incomes and depreciating securities.

OLYMPUS

(From Our Correspondent)

Simla, Oct. 18.

The cotton talks—Bombay mills vs. Up-country—Mr. Khaitan's varcillations—Mr. Mody wants removal of revenue surcharge on Lancashire—Government of India's Embarrassment—Lancashire Delegation's unofficial status—Japan first, Lancashire afterwards, in negotiation, if not consideration.

The real sensation of this week has been a terrible tug of war between Mr. Mody on one side and Mr. Kasturbhai Lalabhai and Lala Shri Ram on the other. Mr. Khaitan apparently found himself in a difficult position. At one time he seemed inclined to favour the one and at another the other. At one stage, Mr. Mody seemed to have won Mr. Khaitan over, but, so the story has it, a telephone from Mr. Birla, who is in Delhi, put matters right.

* * *

The quarrel seems to be over Lancashire. Mr. Mody wants to make them a gesture. Leaving aside personal prestige he will build up with Lord Willingdon and the British Government. He holds that Bombay Mills would benefit through export of their goods to the Colonial markets, which Lancashire would get them in return for some concession in India. He also thinks that Lancashire men having come all this way must not go back empty-handed and that, as the existing surcharge has been imposed not for protective, but for revenue, purposes, it might as well be withdrawn to please Lancashire.

* * *

The Ahmedabad and Delhi mill interests are not prepared to listen to this argument. They hold that Lancashire competes in finer material which mills in these places are manufacturing, that there is danger in giving Lancashire a footing which would be difficult to withdraw in future. They further contend that the surcharge was imposed by the Government of India and should remain so long as other surcharges remain and that the protection that this gives should not be cast away.

* * *

Mr. Mody retorts that he represents mill interests covering two-thirds of the spindles in the country and therefore his word, in these negotiations, has more weight than that of the Up-country millowners. He feels strong on the point that, left to himself, he would sign an agreement with Lancashire, at least for the next two years, to see that the negotiations are brought to a successful issue and his word given to Lancashire in England is honoured.

* * *

This quarrel places the Government of India in a most awkward position. They are committed to honour any agreement that is arrived at between unofficial delegations, so long as such agreement is in the interest of the country. But as it appears now, it looks as though this agreement will bear only Mr. Mody's signature to represent the Indian side.

* * *

There is also another issue which has a material bearing on the subject of these discussions. The Lancashire delegation was not invited by the Government to India to come over to India. It has come of its own accord and has responded to the call of Mr. Mody. The Government of India cannot, therefore, give to the Delegation any official status. All they could do was to show them some courtesy by hearing them at a special meeting. This, they have done.

* * *

The position of the Government of India seems to be that in the present negotiations Lancashire has no place. They would rather like to concentrate their attention on Japan than dissipate their energies in trying to find a tripartite solution. They tell Lancashire that, if the present talks succeed and India is free to make a friendly gesture to Lancashire, they will do so; but they cannot anticipate anything until their talks with the Japanese are over.

* * *

Now various estimates are being put forward, regarding the possibility of coming to a settlement with Japan. One estimate is that before the Conference disperses from Simla on the 19th an outline of the Agreement should be known. If this happens, the Government of India may be able to turn their minds over the position of Lancashire and give them some hope of accommodation before they sail from Bombay by the end of this month.

* * *

If, however, Japanese talks last longer, then it is only after the Lancashire delegates leave Delhi that the Government of India would know where they stand in regard to them. That means Lancashire delegates will have to depend on the good offices of Whitehall to carry on further correspondence and explore the chances of an agreement.

* * *

On the whole, I should say that the case stated by the Government of India to-day brings the two sides nearer and that, if only the Japanese side would give due weight to the peculiar political and economic position of India, an agreement should be easy to strike. The Japanese were waiting all this time for some concrete proposals to emerge from the Indian Government; and now that they have, the Japanese hope to strike the issue quickly and return to their country with an agreement which, if for nothing else, should prove of great value in establishing a contact with India in what may soon develop into friendly trade relationship on a mutually beneficial basis.

THE RESERVE BANK AND THE STATES

ANOMALIES IN THE RESERVE BANK BILL.

Mr. A Ramayya of Madura has examined the relation of the Reserve Bank, as it is contemplated in the Reserve Bank Bill, to the Indian States ; and the anomalies, which he has brought to light, should serve to focuss attention on this aspect of the constitution and functions of India's central banking institution.

The Bill [Clause I (2)] provides that the Act shall extend to the whole of British India, but I think that unless the States are also included within the zone of its operation, the Bank will fail of its purpose. As British Indian money is legal tender throughout India, the Bank will not be in a position to maintain stability of the monetary system unless it is in a position to regulate the volume of currency and credit for the whole of India. Factors leading to a greater or smaller absorption of currency or credit by the States such as the financial operations of the States' Governments, changes in the hoarding or banking habits of the States' people and princes, changes in the methods of private and public economy in the States, a greater or smaller resort to the use of local currency in such States as Hyderabad, Travancore and so on are likely to affect the powers of control of the Reserve Bank over the monetary system. Unless the banks in the States are also included among the Scheduled banks and brought under control, and the minting and coinage privileges of such of the Ruling Princes as still possess them completely taken away from them, there will not be that amount of unity of policy in the regulation of currency and credit which may be necessary for a Central Bank to secure monetary stability. In the interests of the States themselves, which are in many respects economically more backward than British India, their union with the latter for the purpose of having a united system of currency and credit will be an unmixed good.* The States have, therefore, to be advised or, if necessary, prevailed upon, by the Paramount Power in the exercise of its Sovereign power of intervention for the economic good of India as a whole,† to extend the operation of the Reserve Bank Act to their territories also.

As it is, the Bill is very defective in its references to and distinction between "India" and 'British India' which may lead to various legal difficulties.

The preamble recites that the aim of the Act is to secure monetary stability in *British India* and S. 1 (2) extends that Act to the whole of British India. S. 2 (*e*) confines the definition of Provincial Co-operative bank to societies in British India, thus excluding co-operative banks in the States.

S. 4 (3) provides that only those persons can be shareholders who have their principal places of business or are domiciled in India, thus extending the right to hold shares, to the Princes and peoples of the States also. But S. 4 (3) (*c*) would seem unintentionally to exclude companies incorporated or registered under an Act or Regulation of a State.

S. 6 permits the Bank to have branches or agencies anywhere in India thus including places in the States. Here it is, perhaps, open to question whether the Bank whose sphere of operation is by S. 1 (2) extended only to British India, can transact any business outside British India by having branches there.

S. 17 (1) authorises the Bank to transact business for the Governments of Indian States also.

S. 17 (2) (*a*) and (*b*) permit the Bank's dealing in bills of exchange and promissory notes drawn and payable in India (thus including the States also). Here again it has to be noted that under the law of British India bills drawn or payable in the States are foreign bills, governed by different provisions, with regard to presentation, dishonour, notice of honour, protest, etc., and as for decrees obtained in respect of them execution is not possible as the States and British India treat one another as 'Foreign countries.' Unless therefore the whole of India has a unified system of law and judicial enforcement, it is dangerous for the Reserve Bank to deal in bills drawn and are payable in the States, as the liquidity of its assets is liable to be hampered on account of legal difficulties and delays.

S. 22 says that the Bank will have the sole right of note issue in *British India* and would thus seem to exclude the States from the benefits of such issues. The States have also not got the power to issue currency notes of their own.

S. 33 (5) requires that the Bank shall hold 17/20ths of its gold assets in British India (so that any holding in its branches in the States will not count for the purpose of this section).

S. 42 (1) requires that for the purpose of determining the liabilities of a Scheduled bank, its liabilities in the whole of India (including the States) have to be included. While this will affect banks like the Mysore State Bank which have branch offices in British India, a bank in a State, having no branch office at all in British India will wholly escape, as S. 42 cannot operate outside British India as per S. 1 (2).

These points are mentioned here simply to show the necessity of a uniform system of currency and credit and unification of the laws relating to same for the whole of India. I have not had either the facilities or the time required to investigate the question of the Bank's relation with the States in full. But I venture to suggest the following matters for considerations :—

(1) By arrangement with the major States, the Bank should open branches or agencies in important places, and undertake to transact all financial business for them. The States Governments should agree not to carry on their financial operations such as the raising of loans, etc., except through the Bank and should also keep their balance with the Bank. This will enable the Bank to control the monetary system of the country more efficiently than it otherwise could and at the same time secure advantageous terms to the States.

(2) In the assets of note issue, securities of the States, approved by the Governor-General-in-Council and having a maturity of not more than five years may also be included up to a fixed proportion. As the Bank's notes will be current legal tender in the States this is quite a proper asset for backing the note issue.

(3) In order to make the Bank a thoroughly Central Bank for the whole of India, it is also desirable that at least 2 of the Directors of the Central Board and two members of each of the Local Boards are representative of the States. If no one of the elected Directors is such a representative, the Governor-General-in-Council may so exercise his power of nomination as to bring about this result.

*The Indian States Committee (1928-9) have also emphasised the advantage of a united system and stated "We are strongly of opinion that the multiplication of different currencies in India is hostile to the best interests of the States and to the country as a whole. We have heard of one State where the currency has been manipulated with such results that trade has been seriously affected."

†The existence of such a power is unambiguously affirmed in the States Committee Report, p. 30.

OVERSEAS' NEWS:

By Air Mail

UNITED STATES OF AMERICA

WAR DEBT DISCUSSIONS BEGIN.

With the arrival of the British Delegation for negotiation with the Administration on the question of war debt payments, hopes are entertained here and there that the success of these negotiations might also mean an end to the present instability of currency and exchange. For any settlement arrived at between Great Britain and the United States as to the final payment would mean that it is fixed in terms of a stable currency and Great Britain might well try to lead on from debts settlement to a settlement of present monetary problems. The week's developments, however, have not been such as to encourage any hopes in this regard. Mr. D. Acheson, the under Secretary to the Treasury, has been entrusted with the conduct of the British war debt negotiations; and he accordingly conferred with President Roosevelt on Wednesday before receiving his final instructions. The negotiations were Scheduled to begin on Thursday; and the first discussion was conducted between Sir Frederick Leith-Ross, the Financial Adviser to the British Government, Sir Ronald Lindsay, the British Ambassador, and Mr. D. Acheson on October 5. The meeting was described as "preliminary" in order that exaggerated reports either way would not gain currency and credulity. It is understood that the British representative did not present any specific plan. As is usual in international negotiations of this kind, much time was naturally taken up in fixing the exact procedure to be adopted. And both sides seem to agree on the idea that the aim should be rather to evolve a plan as a result of mutual discussions than to expect either side to confront the other with a definite scheme to be treated as a basis of discussions. All this is, no doubt, well and good. But the report that neither President Roosevelt nor Mr. Acheson will have time sufficient to engage the British negotiator is somewhat a wet blanket. It is true that, owing to the pre-occupations of the Administration with the problems of the recovery, the principal members of the Government will not have as much time to spare as otherwise. But the war debt discussions are not obviously less in importance than the thousand and one problems thrown up by the recovery. It is to be hoped that, in spite of the pressing demands on their time, Mr. Acheson and Mr. Roosevelt will speed up the negotiations with Sir Frederick Leith-Ross and his colleagues. This is all the more necessary, in as much as it seems to be the aim of the British Delegation, not so much to arrive at a definite settlement before December, as to make clear to the world that, if December 15 did not see a settlement, there was nothing wanting on the part of the British Government in this regard.

Bankers Demand Stabilisation

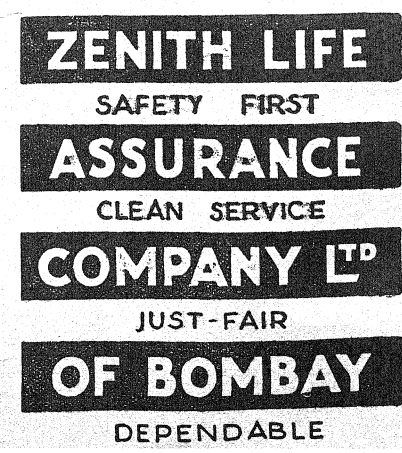
Expansion of credit or currency or even both, continues to vex the Administration. Like the two other factors in American economy, the bankers are also summoning courage to issue threats to Mr. Roosevelt or at least stipulate conditions of their own for their co-operation. It may be supposed that American bankers, as elsewhere in the world, are opposed to the heterodox plans of Mr. Roosevelt. They claim to have made a careful study of the monetary situation and they contend that the establishment of a Dollar Equalisation Fund and the heavy accumulation of foreign exchange by such a Fund, with repatriation of capital, would bring about a situation in the international money market, which would grow more intractable on account of its delicacy and create unforeseen dangers alike for America and the rest of the world. The bankers would, therefore, prefer to see the Administration decide once and for all the question of currency stabilisation. According to them, the chief need of the recovery plan, in its present stage, is the revival of the capital market. For they contend that the threat of inflation and devaluation has stopped the flow of capital into industry. Private investment has been more or less choked, and investment under the auspices of public corporations would never be able to accomplish the end, so long as individuals are obliged to hold aloof on account of vague fears of depreciation. The bankers have, therefore, made bold to tell Mr. Roosevelt that, if the Government refrains from proceeding with its own schemes of credit expansion and stabilises the currency and exchange, the bankers would offer their co-operation in the credit expansion programme. It will be remembered that the scheme for the sale of preferred stocks to the Reconstruction Finance Corporation and the extension of credit by the latter to the bank was formulated by Mr. Roosevelt only after bankers had definitely refused to co-operate with Mr. Roosevelt. For if the demands of the bankers now formulated are granted, Mr. Roosevelt would find himself again in exactly the same position as a month and a half ago.

R. F. C. gets reduced interest

There has been no direct reply to this demand of the bankers but two developments, which have taken place since, may be interpreted as the indirect answer of the Administration to the implicit threats of the bankers. The Reconstruction Finance Corporation has applied to the Treasury for a reduction of the interest now charged on advances to the Corporation. The Corporation contends that its programme involves a number of loans which do not bear interest and, therefore, it would not be possible for the Corporation to finance the credit expansion programme unless the money advanced to it by the Treasury is got on a cheaper basis of interest than hitherto. President Roosevelt has been quick to comply with the request of the R. F. C. and an order has just been issued that preferred stock sold by banks to Corporation shall bear interest at only 4 per cent. compared with 5 per cent. formerly.

President's Speech at Chicago

The second answer to the bankers' demand is in the shape of President Roosevelt's speech to the Convention to the American Legion at Chicago on October 2nd. High hopes were entertained that this



Air Mail Week

occasion would be availed of by the President to clarify his monetary policy. This was, indeed, too much to expect, as there has been nothing to enable Mr. Roosevelt to clarify his ideas and plans in this regard. The case for wait and see continues just as strong as ever ; and it is not surprising that in his speech the President scarcely mentioned monetary matters and hardly anything about currency inflation or stabilisation. He did not, however, refrain from making a reference to the achievements of the Recovery Administration. The President says that the "freezing of credits has stopped" and "the ice is melting." "Industry has picked up ; and farmers' income has been raised but must be further increased and purchasing power stimulated."

One of the significant suggestions made in the course of his speech is the hint to war veternas and to the country as a whole that the former must be prepared to earn their living just as strenuously as any other able-bodied citizen. Cases of injury suffered as a result of war would, of course, continue to be treated as exceptions ; but it is certain that Mr. Roosevelt intends his Chicago speech to pave the way for yet another attack on the pensions of war veterans.

New Credit Supervisor

To return to the question of credit expansion. The President does not yet set much store by the co-operation of the bankers. Though he would welcome it, he is not prepared to pay a heavy price for such co-operation. And he still retains the confidence that he would be able to bring about the co-ordinated drive to extend credit with a view to stimulate business. It is reported that he has offered the post of Credit Supervisor to Mr. Henry Bruere, the President of the Bowery Savings Bank. Mr. Roosevelt conceives that the duties of this new office would include broad supervision of the activities of the Reconstruction Finance Corporation, the Reserve Board, the Treasury, Public Works Administration and the farm loans. Mr. Roosevelt has also conceived of special efforts to relieve the markets of surpluses and to provide food and clothing to the unemployed. There is already a Federal relief appropriation of 330 million dollars for this purpose. And Mr. Roosevelt has now appointed Mr. Hopkins, the Relief Administrator, as Chairman of the new Government Corporation which was announced by him on Sunday night. The President is also taking stock of the whole position ; and in his anxiety to know what has been achieved by way of re-employment he has sent a questionaire to employers asking them to furnish figures showing the number of workers on the pay roles as on July 15 and on July 14. The object is to shape future policies on the basis of the result so far achieved.

Stock Market Control

Politically, there is a demand for a special session of the Congress before it is due to meet in the normal course on January 3, 1934. Mr. Roosevelt is stoutly resisting the demand, on the ground that the difficulties of the National Recovery Administration will take all his time and attention during the remaining days of this year and that a session of the Congress at this hour will, far from making things easier, only tend to complicate them all the more. The two outstanding questions before the Administration, one in the nature of daily administration and the other in the nature of a larger problem are the labour strikes that threaten to occur at frequent intervals and the stock market control.

Labour Troubles

As regards the former, the Secretary of State for Labour, Miss Perkins, has recently said that there will have to be a further increase in wages and a further shortening of hours. The Labour Federation has repeatedly made similar demands in the past. And Mr. Green, the President of the American Federation of Labour, has expressed his opinion that only a 30 hour week will solve the problem of employment. The capitalist press, of course, continues to assail the Administration for its alleged surrender to labour. The *Herald Tribune*, for instance, terms this development as grotesque Sovietised undermining of historic practices and traditions." The paper urges the President publicly to disown inflation and to end the whole recovery plan. The manifest impossibility, if not unwisdom, of the course suggested by the *Herald Tribune* is the answer to the paper's demand. But it would require more than human patience and tact to deal with the successive crops of strikes and labour troubles. A difficult situation has always ruled in connection with the coal code which went into effect on October 1st. But happily the Labour Union has ordered the men back to work in Pennsylvania, Ohio and Indiana, as a result of the ultimatum which General Johnson has sent to the colliery men. The long awaited rubber tyre industry code has been submitted to the N. R. A. But to compensate these the Ford Assembly Plant which normally employs 25,000 men has closed down. Other strikes are reported in the motor industry. About 13,000 workers in a foot wear plant at Hudson have walked out. All this, apart from the exaggeration to which they are naturally subject from interested persons, are only problems of daily administration, in as much as a vigilant, intelligent and impartial administrator such as General Johnson could always adjust the differences between employers and employees and set the wheels of each industry on the start again. As regards the question of stock market control it has been announced by the Secretary of the Department of Commerce that he has appointed a committee at the request of President Roosevelt to consider the advisability of formulating legislation for submission to the Congress with a view to the supervision of the New York and other stock and other security exchanges by the Federal Government and the Federal Securities Act will also be studied with a view to suggesting changes therein. There is also the question of foreign bond defaults on which President Roosevelt Mr. Cordell Hull and Mr. Woodin conferred on October 6. Discussions are also in progress in New York ; and it is possible that the Federal Corporation of Foreign Bond Holders, provided for in the Securities Act, will be formed with separate corporations for the various areas.

Business Reports

It is satisfactory to note that financial authorities are inclined to the view that the general trend of business is better. However, the restrictive effects of the code system have their adverse effect in retarding the progress. For instance, it is believed that the moderate gain on the steel output is likely to be offset by the codes working against any expansion.

Air Mail Week

The motor trade is holding its own pretty well but activity is reduced as compared with what was hoped. Car loadings forecast to be above the figures for the last year, and are also better than earlier this season, but they are steadily losing their relative lead over last year established some months ago. Electric power production for the week ending September 30 was 1,652,811,000 kilowatt hours, an increase of 10.2 per cent. on the corresponding figure for last year. Retail trade also shows moderate improvement. But the banking situation is not improving.

GREAT BRITAIN

The mood and temper of national finance are never better known than when the Chancellor of the Exchequer and bankers meet in an informal social gathering. The annual banquet of the Lord Mayor and Lady Mayor "to meet the Chancellor of the Exchequer, the Governor and the Directors of the Bank of England and bankers and merchants of the City of London" was the occasion for insight into the subtle workings of the minds of these eminent personalities. Last year, the Minister of Health took the place of the Chancellor of the Exchequer in his unavoidable absence ; and as Mr. Montagu Norman recalled during the course of his address, he advised the assembled gathering "to lead a quiet life, to avoid excitement and to take no stimulants."How it has been pretty impossible for the nation to follow that advice, owing to causes over which Britain had no control, is a matter of common knowledge. But it is interesting to note that the Chancellor of the Exchequer is able not only to preserve a degree of optimism in his outlook but also to prescribe specifics for ills which are admittedly too complicated for any cut and dry treatment. Of the many speeches that were delivered on the occasion Mr. Chamberlain's was easily the least notable for novelty of idea or arresting expression. It was in fact, a reiteration of the views on the depression which he pressed to such depressing consequences at the World Economic Conference in the middle of the year. He repeated his faith that the four factors that could enable the world to regain its lost prosperity are: a rise in wholesale prices ; removal or lowering of excessive barriers ; the establishment of an international standard ; and the resumption of international lending. All these points admit a variety of opinion in regard to details, though few would disagree that each of these is bound to have its wholesome effects on the trend of world trade and economy. The months that have passed have not made any impression on Mr. Chamberlain's attitude. He still believes that the curtailment of production with a view to bring it into agreement with demand is one of the paths which we might safely tread to reach the goal of trade revival. It should be obvious to anybody that curtailment of production cannot by any means be said to hold out the same prospect for the world as expansion of consumptive power, in whatever way the latter might be achieved. But as the *Economist* remarks, optimism is perhaps the attribute of the average politician, whose chances with the electorate would be reduced to nothing, if he were to pull a long face over every living question, when he is seeking their votes.

Mr. Montagu Norman, on the other hand, provided through his robust caution, a singular contrast to the easy optimism of the Chancellor. Not that Mr. Norman is inclined to under-rate the many signs of improvement which British finance and economy have to show during the last one year and more. But like the cautious banker that he is, he still dwells on the dangerous dark spots of world finance on which British finance still depends for its prosperity to a very large extent. He was not modest in the claims that he made in regard to the achievements of bankers in the past. In the first place, he affirmed that the City had followed only too closely the advice which the Minister of Health gave at the Mayor's Banquet last year. And he also expressed the wish that there were better and less changes in the future than had been their lot in the past. He claims that the City of London is another example of the theory of evolution which its originator had meant to apply only to the physical development of man. But Mr. Norman was hesitant to declare that the bankers and the community, which he represents, could be quite sure of meeting the situation that might arise in the future. There was more need for hope than reason for confidence. The following words of Mr. Norman are a much-needed corrective to those who wish to shout merely on the strength of a few figures here and there:

"I agree, as far as I am aware of the facts, with the hopeful or more hopeful prospects which are discerned by the two speakers who have already preceded me. But we must remember here that in this city we are largely international, and we depend on much that comes and goes overseas, and we cannot look east or west without being persuaded that there are dark clouds hovering ahead. It may be that these clouds, with the approaching dawn, will be swept away. But there they are for the moment. Internationally speaking, as far as it affects the business of the bankers and merchants of this city, there they are and they must be taken into account."

The revenue returns for the first half of the current year are one additional source of encouragement in the present times when the feeling in Britain is markedly buoyant. It is true that so far as the Treasury is concerned, little attempt is made to probe into the financial possibilities of the year till the calendar year is ended. And there is always the risk in attempting to fill the financial picture of the year on the basis of the experiences of the first half of the year. And during 1933-34 there is, as the *Financial News* aptly points out, the special circumstance that the first half year has been a period of some activity in the capital market. Even more significant is the fact that the first half of the last financial year, with which the present figures are now compared, was a period of very low activity in the capital market. It, therefore, stands to reason that there should be a marked difference in the revenue during these two periods and that any conclusion based on that difference regarding budget possibilities for the year are apt to be wide of the mark. All the same, it is comforting to the average

Air Mail Week

taxpayer to note that the expectations of the Chancellor of the Exchequer, when he framed the budget for 1933-34 have been more than fulfilled during the months that have now gone by. The improvement in the position may be gauged, broadly speaking, from the following table showing the deficits for the first half-year periods during the last 6 years:

	£		£
1933 ...	48,590,155	1930 ...	81,043,704
1932 ...	104,108,465	1929 ...	72,083,406
1931 ...	118,176,655	1928 ...	75,967,367

A scrutiny of the principal revenue items is even more encouraging; and the only important items on which any reasonable estimates of the total financial position may be made are exchange duties, stamps, customs and excise. And it is remarkable that in each of these the improvement is striking. As regards stamp duties it should be remembered that during the previous years the Chancellor of the Exchequer had had too much luck and that in the last budget Mr. Neville Chamberlain was content to hope for less, if only to avoid a disappointment. But disappointment, though of a welcome kind has followed Mr. Chamberlain. Nevertheless, owing to the death duties realisable from the successors of Sir John Ellerman death duties have gone up from 39 million to £44.2 million. At its present level the yield is now well over half of the total estimates of £74¾ million. As regards the stamp duties the increase for the year over the previous was estimated to be 1.18 million and already the half year has seen an improvement of over £1¾ million. Customs revenue is £89.3 million against £82.3 million last year. In the beer duty the Chancellor provided for an addition of £19.7 million and for the first half year the fall is £8.7 million and the total revenue of 51.8 million is more than half of the estimates for the full year. The other important points brought out in the Treasury returns are that the record low rates obtained for the weekly sales of Treasury Bills together with the savings in regard to interest achieved by the conversion schemes have resulted in a fall of nearly £30 million in the interest and management of the national debt. The total floating debt outstanding amounts to 1,020,860,000 against only 885,985,000 a year ago. As pointed out in a different context in these columns last year a rise of about 154 million in Treasury Bills outstanding is mainly a reflection of the requirements of the exchange equalisation fund.

The commercial agreement between Great Britain and Finland has now been completed and the terms issued in the form of a White Paper. The provisions show that British coal is the chief beneficiary of this treaty, the percentage beingfixed at 75 per cent. of the total imports of Finland, with the same guarantees as to price and stability as have been given by British exporters in the case of other Scandinavian treaties. As regards the concessions made by Britain to Finland in respect of tariffs, no elaborate provisions are called for, in as much as under the 1923 treaty Great Britain is obliged to grant Finland a most favoured nation treatment. The reductions which have been effected as a result of the treaties concluded with other countries are therefore automatically extended to Finland also. The only two additional concessions are the consolidation of the duty on birch wood and plywood at 10 per cent. and the reduction of the duty on woollen sewing thread needles from 15 to 20 per cent. In return for this, Finland is assured of a place in any quota system that may be formed in regard to her imports into Britain. In some instances, a minimum import is guaranteed as in the case of butter in which Finland is assured of 198,000 cwt. per annum which represents a reduction of roughly 10 per cent. on average imports in previous year. Great Britain has secured import reductions in Finnish tariffs in return for the assurance of favoured national treatment and minor tariff concessions. The duties on all important classes of cotton goods have been reduced and the textile trades are, therefore, deriving substantial benefits from the treaty. As regards other duties, it is necessary to point out that the Finnish duties are mainly specific. And the British Government have been content to stipulate that such specific duties as are in excess are to be brought down to a level at which they would equalise an *ad valorem* levy of 30 per cent. Where the specific duties are over this level, the Finnish authorities undertake to reduce them to that level.

Other tariff reductions cover wool and silk mixtures, jute and linen, herrings, tin plates, small motor cars, and whisky. More importance is attached, however, in the case of the whisky trade, to the detailed provisions which will ensure that only whisky produced in British speaking countries will be sold as "whisky."

Fixation of Duties

In addition to tariff reductions, certain "conventionalisations," or fixation of duties, have been obtained. Coal and coke are to be admitted duty free; and this is claimed to be an important concession, in view of the strong desire on the part of the Finnish timber industry for a protected home market. Other duties which are to be fixed at their present level cover cotton yarns and thread, wool yarns, motor car and bicycle tyres, and linoleum. It has also been possible to obtain certain concessions for Colonial products.

"Purchase Agreements"

In addition to tariff concessions, there are in this treaty, as there were in the Danish, certain "purchase agreements." It is hoped under these that the present important Finnish purchases of wheat flour will be at least maintained; that there will be largely increased purchases of creosote; and, under a provision by which all Finnish bacon imported into Great Britain shall be wrapped in British cloth and cured with British salt, an increased market for jute products and salt is anticipated.

Similar purchasing agreements are contemplated for the iron and steel and commercial vehicle trade; and the opportunities for this, as well as for coke, are to be fully investigated by joint talks between British exporters and Finnish importers. An important delegation on behalf of the British motor industry visited Finland during the recent British week, and a substantial business is already assured.

GROWTH OF INDUSTRIAL LIFE ASSURANCE IN UNITED KINGDOM

The Report of the Industrial Assurance Commissioner for the year 1932, shows that in spite of the trade depression and the abnormal unemployment which prevailed during the year 1931, Industrial Assurance is continuing to grow. This shows that the necessity of Life Assurance particularly to the middle and poor classes is well understood in England, and that the English people realise that life assurance is all the more essential during depression times. Industrial assurance is practically unknown in India and very few companies do very little life assurance resembling Industrial assurance. Perhaps existing conditions in India do not suit for the growth of this type of life assurance. For, the poor class people of India (who form a very big majority of the total population) do not earn enough even to provide themselves with two meals a day. And even among those who can afford to insure, insurance education has so little spread, that very few people understand the utility of life assurance. As such even the growth of ordinary life assurance is so backward in India that it is difficult to imagine the growth of industrial assurance in India in the near future. Our total ordinary life assurance in force at the end of 1931 was Rs. 168 crores while the total Industrial assurance in force in England (a much smaller country than ours) was more than ten times this figure (Rs. 1,700 crores).

The Report contains numerous statistical tables compiled from the Returns of 16 industrial assurance companies and 153 Friendly Societies. The total number of industrial policies in force at the end of 1913 was 82.7 millions as against 80.8 millions in 1930. The total sums assured was £1,281 millions representing an increase of £29 millions during the year. The number of new assurances effected during 1931 was 108 millions being 16 millions in excess of the figure of the previous year. The revenue accounts of all the offices show a total income of £70.7 millions of which £56.1 millions was premium income and the balance of £14.6 millions represented mainly income from interests, rents and dividends. The disbursements include £28.3 millions in claims and surrenders; £18.8 millions in management expenses; £11.4 millions in dividends to shareholders and other miscellaneous expenses; the balance of £12.2 millions being added to the assurance funds. The report also states that the financial position of companies transacting this class of business is getting stronger and stronger as large sums are being added year after year to the Investment depreciation fund. During the year 1931 more than £7 millions was thus disbursed, the Prudential and the Pearl assurance companies (two of the largest industrial assurance companies) themselves transferring £2 millions each to the reserve funds. The above figures clearly prove the phenominal growth of industrial life assurance in England during recent years.

THE ANDHRA INSURANCE COMPANY.

The Andhra Insurance Company is one of the sound and well managed life offices established in the Presidency of Madras. Though established only in 1925, it is the second biggest of the 21 insurance companies of the Madras Presidency the easy first being the United India. In spite of the trade depression of recent years, the position of the company is getting stronger and stronger year after year. The following tabular statement shows the definite progress of the company in all respects.

Year.		New Business.	Total Business in Force.	Total Premium income.	Interest income	Life Fund.	Expense Ratio.
1930	...	13,73	...	1,93	11	2,15	39%
1931	...	14,38	43,30	2,11	16	3,27	30.1%
1932	...	14,80	51,38	2,50	24	5,11	30.1%

Though there is no substantial increase in the volume of new business, the total premium income, the life fund and the interest receipts show decided improvements year after year. It is noteworthy that such a young company as the Andhra is able to reduce its expense ratio gradually and reach a figure well comparable to many of its older sister companies. Claims by death during the year amounted to Rs. 20,000 and we are told that these are being settled promptly. Expenses of management amounted to Rs. 83,100 and the life fund at the end of the year was increased by Rs. 1,84,000 to Rs. 5,11,000.

The balance sheet of the company shows on the liabilities side a capital of Rs. 40,823, a life fund of Rs. 5,11,364, a reserve fund of Rs. 5,400 and unpaid claims to the extent of Rs. 15,000. On the assets side, gilt edged securities account for Rs. 1.67 lakhs or 28 per cent. of the total assets (Rs. 5.99 lakhs), debentures of various land mortgage banks stand at Rs. 1.88 lakhs or 31.4 per cent., cash in bank and at hand amounts to Rs. 1.64 lakhs or 27.4 per cent., loans on policies and on personal securities amount to Rs. 24,000 or 3.9 per cent., and miscellaneous assets account for the remaining 9.3 per cent. The policy of the company in helping the land mortgage banks is indeed noteworthy particularly in view of the fact that the one most important institution required for the uplift of rural India is the Land Mortgage Bank. But investing too much of its funds in this may not prove quite sound and profitable unless these debentures are guaranteed by the Government. The company seems to have entirely shut out mortgages on real properties and house properties as items of investment. Both of these may prove to be good and profitable investments if particular care is taken in the selection.

The company had its first valuation on 31-12-1929 and it revealed a surplus of Rs. 33,00. It then declared a simple reversionary bonus of Rs. 10 per thousand per annum to all its with profit policy holders.

GROWTH OF INDUSTRIAL LIFE ASSURANCE IN UNITED KINGDOM

The Report of the Industrial Assurance Commissioner for the year 1932, shows that in spite of the trade depression and the abnormal unemployment which prevailed during the year 1931, Industrial Assurance is continuing to grow. This shows that the necessity of Life Assurance particularly to the middle and poor classes is well understood in England, and that the English people realise that life assurance is all the more essential during depression times. Industrial assurance is practically unknown in India and very few companies do very little life assurance resembling Industrial assurance. Perhaps existing conditions in India do not suit for the growth of this type of life assurance. For, the poor class people of India (who form a very big majority of the total population) do not earn enough even to provide themselves with two meals a day. And even among those who can afford to insure, insurance education has so little spread, that very few people understand the utility of life assurance. As such even the growth of ordinary life assurance is so backward in India that it is difficult to imagine the growth of industrial assurance in India in the near future. Our total ordinary life assurance in force at the end of 1931 was Rs. 168 crores while the total Industrial assurance in force in England (a much smaller country than ours) was more than ten times this figure (Rs. 1,700 crores).

The Report contains numerous statistical tables compiled from the Returns of 16 industrial assurance companies and 153 Friendly Societies. The total number of industrial policies in force at the end of 1913 was 82.7 millions as against 80.8 millions in 1930. The total sums assured was £1,281 millions representing an increase of £29 millions during the year. The number of new assurances effected during 1931 was 108 millions being 16 millions in excess of the figure of the previous year. The revenue accounts of all the offices show a total income of £70.7 millions of which £56.1 millions was premium income and the balance of £14.6 millions represented mainly income from interests, rents and dividends. The disbursements include £28.3 millions in claims and surrenders; £18.8 millions in management expenses; £11.4 millions in dividends to shareholders and other miscellaneous expenses; the balance of £12.2 millions being added to the assurance funds. The report also states that the financial position of companies transacting this class of business is getting stronger and stronger as large sums are being added year after year to the Investment depreciation fund. During the year 1931 more than £7 millions was thus disbursed, the Prudential and the Pearl assurance companies (two of the largest industrial assurance companies) themselves transferring £2 millions each to the reserve funds. The above figures clearly prove the phenominal growth of industrial life assurance in England during recent years.

THE ANDHRA INSURANCE COMPANY.

The Andhra Insurance Company is one of the sound and well managed life offices established in the Presidency of Madras. Though established only in 1925, it is the second biggest of the 21 insurance companies of the Madras Presidency the easy first being the United India. In spite of the trade depression of recent years, the position of the company is getting stronger and stronger year after year. The following tabular statement shows the definite progress of the company in all respects.

Year.		New Business.	Total Business in Force.	Total Premium income.	Interest income	Life Fund.	Expense Ratio.
1930	...	13,73	...	1,93	11	2,15	39%
1931	...	14,38	43,30	2,11	16	3,27	30.1%
1932	...	14,80	51,38	2,50	24	5,11	30.1%

Though there is no substantial increase in the volume of new business, the total premium income, the life fund and the interest receipts show decided improvements year after year. It is noteworthy that such a young company as the Andhra is able to reduce its expense ratio gradually and reach a figure well comparable to many of its older sister companies. Claims by death during the year amounted to Rs. 20,000 and we are told that these are being settled promptly. Expenses of management amounted to Rs. 83,100 and the life fund at the end of the year was increased by Rs. 1,84,000 to Rs. 5,11,000.

The balance sheet of the company shows on the liabilities side a capital of Rs. 40,823, a life fund of Rs. 5,11,364, a reserve fund of Rs. 5,400 and unpaid claims to the extent of Rs. 15,000. On the assets side, gilt edged securities account for Rs. 1.67 lakhs or 28 per cent. of the total assets (Rs. 5.99 lakhs), debentures of various land mortgage banks stand at Rs. 1.88 lakhs or 31.4 per cent., cash in bank and at hand amounts to Rs. 1.64 lakhs or 27.4 per cent., loans on policies and on personal securities amount to Rs. 24,000 or 3.9 per cent., and miscellaneous assets account for the remaining 9.3 per cent. The policy of the company in helping the land mortgage banks is indeed noteworthy particularly in view of the fact that the one most important institution required for the uplift of rural India is the Land Mortgage Bank. But investing too much of its funds in this may not prove quite sound and profitable unless these debentures are guaranteed by the Government. The company seems to have entirely shut out mortgages on real properties and house properties as items of investment. Both of these may prove to be good and profitable investments if particular care is taken in the selection.

The company had its first valuation on 31-12-1929 and it revealed a surplus of Rs. 33,00. It then declared a simple reversionary bonus of Rs. 10 per thousand per annum to all its with profit policy holders.

INCOME-TAX EXPERT

thoroughly conversant with procedure for claims against Income Tax authorities and who can advise on Returns, etc. can be consulted by gentlemen home on leave from India.

STATISTICAL INFORMATION

FOREIGN TRADE OF BURMA

The following is a report on the principal variations in the foreign trade of the Province of Burma during the month of September, 1933, as compared with the corresponding period of 1932:—

The combined value of Imports and Exports was Rs. 174.88 lakhs as against Rs. 232.50 lakhs, showing a decrease of Rs. 57.62 lakhs.

IMPORTS

The total value of merchandise decreased from Rs. 77.99 lakhs to Rs. 63.96 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.
Machinery and Millwork:—	
Mining Machinery other sorts	1.13
Sugar—	
Sugar 23 D.S. and above	2.18
Textiles—Cotton Manufactures—	
Blankets	0.23
Textiles—Piece-goods—	
White	3.51
Coloured	5.26
Textiles—Artificial Silk—	
Piece-goods made entirely of artificial silk ...	0.12

EXPORTS

The total value of Indian merchandise recorded during the month was Rs. 110.92 lakhs as against Rs. 154.51 lakhs, showing a decrease of Rs. 43.59 lakhs. The following articles accounted for the decrease, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.
Fodder, bran and pollard:—	
Rice Bran	2.53
Grain, Pulse and Flour—	
Beans	0.45
Paddy	0.11
Rice	45.80
Wolfram Ore	0.38

The following articles, however, showed increases, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.
Metals and Ores—	
Pig Lead	13.01
Tin Ore	5.14
Zinc or spelter all sorts (Zinc concentrates)	4.52
Paraffin Wax	19.47

TRADE OF KARACHI.

The statistics of the foreign trade of the port of Karachi for September, 1933, issued by the Collector of Customs show that the total value of imports (merchandise) amounted to Rs. 1.16 crores, a decrease of Rs. 60 lakhs and that of exports to Rs. 59 lakhs, a decrease of Rs. 20 lakhs as compared with the figures for September, 1932. The progressive totals for the six months ending September, 1933, show a decrease of Rs. 2.62 crores or 29 per cent. under imports, but an increase of Rs. 54 lakhs or 19 per cent. under exports.

Comparative figures of the principal imports and exports for September, 1932 and 1933, are given below:—

IMPORTS

In September, 1933.

Cotton manufactures		20,19,910
Woollen goods		17,23,769
Metals and ores		8,32,092
Vehicles		2,34,776
Luquors		1,96,424
Cotton, twist & yarn		6,229
Machinery & mill work		17,73,148
Oils		6,55,316
Sugar	4,999	5,00,034

The decrease under cotton manufactures occurred in receipts of white and coloured goods. Imports of white goods amounted to 5¾ million yards valued at Rs. 9 lakhs as against nearly 17 million yards valued at Rs. 27 lakhs, while those of coloured goods totalled 3½ million yards valued at Rs. 7 lakhs as against 10½ million yards valued at Rs. 23 lakhs in September, 1932. Imports of grey goods at nearly 1½ million yards valued at Rs. 2 lakhs showed an increase of 8,500 yards in quantity but a decrease of Rs. 28,000 in value. The total imports of cotton piecegoods during the six months ending September, 1933, amounted to 85 million yards valued at Rs. 1.39 crores, showing a decrease of 50 per cent. in quantity and 54 per cent. in value as compared with the corresponding period last year. The share of the United Kingdom in the total imports of cotton piecegoods during the half-year ending September, 1933, was 65 million yards valued at Rs. 1,11 crores, a decrease of 48 per cent. in quantity and 51 per cent. in value, while that of Japan was 19½ million yards valued Rs. 27 lakhs, a decrease of 50 per cent. in quantity and 57 per cent. in value as compared with imports in the corresponding period of 1932-33. The decrease under woolen goods occurred mainly in receipts of piece-goods from France, Italy and Czechoslovakia, yarn and knitting wool from Poland and blankets and rugs from Italy. The increase in imports of machinery was due chiefly to larger arrivals of sugar machinery from the United Kingdom and Belgium, partly set off by reduced arrivals of electrical machinery from the United Kingdom. The improvement under oils was most noticeable in receipts of fuel oils from British Borneo and Persia. Of the total quantity (4,999 tons) of sugar imported during the month under review, 3,500 tons came from Java, 1,060 tons from the United Kingdom and 400 tons from Beira (Portuguese East Africa). The total imports of sugar during the first-half of the current official year aggregated 31,646 tons as against 42,465 tons in the corresponding period of 1932-33.

EXPORTS.

In September, 1933.

	Quantity Tons	Value Rs.
Cotton, raw ...	4,846	23,95,097
Rapeseed ...	3,914	4,39,546
Wheat flour ...	587	62,584
Hides, raw ...	104	56,677
Barley ...	6	358
Wool, raw (Indian and Foreign ...	1,067	8,39,968
Skins, raw ...	372	3,59,504
Wheat ...	92	8,175

The decrease under cotton was due largely to entire absence of shipments to Japan which took 3,881 tons valued at Rs. 21 lakhs in September, 1932. Italy, Belgium and Germany also took less, but the United Kingdom took more. The total quantity of Indian cotton exported during the six months ending September, 1933, was 73,779 tons (413,163 bales as against 42,651 tons 238,843 bales) in the corresponding period last year. The drop in exports of rapeseed occurred mainly in shipments to Italy which took only 500 tons valued at Rs. 55,000 as against 6,265 tons valued at Rs. 8 lakhs purchased in September, 1932. The decrease in exports of raw wool occurred in shipments to the United Kingdom and the United States of America. Increased shipments of goat skins to the United States of America accounted for the improvement in exports of raw skins.

TRADE OF ADEN.

The total value of the private sea-borne and land trade of Aden during 1932-33, as compared with the previous year, decreased from Rs. 9,39,57,643 to Rs. 8,94,38,223. The sea-borne trade alone decreased from Rs. 9,19,28,434 to Rs. 8,79,16,569. The total value of Indian trade decreased from Rs. 1,80,87,321 to Rs. 1,08,23,976 while land trade decreased from Rs. 20,29,209 to Rs. 15,21,654.

Sea-borne Trade.—The total value of the import trade, exclusive of treasure, increased from Rs. 4,96,72,320 to Rs. 4,99,33,537. The total value of the export trade, exclusive of treasure, amounted to Rs. 3,06,66,310 as compared with Rs. 3,24,30,454 in the year previous, showing a decrease of Rs. 17,64,144.

Distribution of trade by Countries.—The total sea-borne trade, excluding treasure, amounted to Rs. 8,06,49,847 as against Rs. 8,21,02,774 in 1931-32. The British Empire led with a total of Rs. 2,35,39,368 of which India's share was Rs. 94,29,195. The second position is occupied by Asia, the value being Rs. 3,91,50,510 with a percentage of 48.54. Africa follows with a total of Rs. 97,44,050 and a percentage of 12.09. Europe has a total of Rs. 55,34,650 and a percentage of 6.86 and the United States of America has a total of Rs. 26,31,264 and a percentage of 3.32.

OKHA PORT.

The total cargo handled at Okha port during the year 1931-32, which is the latest period for which statistics are available, amounted to 1,39,390 tons valued at Rs. 58,43,971 as against 77,189 tons valued at Rs. 58,25,072 in 1930-31, 73,103 tons valued at Rs. 85,46,099 in 1929-30, 80,527 tons valued at Rs. 1,05,99,596 in 1928-29, 51,535 tons valued at Rs. 92,27,701 in 1927-28 and 16,196 tons valued at Rs. 29,39,611 in 1926-27.

JAMNAGAR & DWARKA RAILWAY.

The length of the Railway is 157.35 miles, which comprises the Jamnagar Section, 54.22 miles; Jamnagar-Dwarka Section 65.92 miles; and Okhamandal Section 37.21 miles. The total capital outlay including suspense of the entire system is Rs. 1,61,15,425 which works out to Rs. 1,02,417 as the capital outlay per each open mile.

The gross earnings, working expenses and the net income of the system during the year, amounted respectively to Rs. 13,90,362, Rs. 10,02,788 and Rs. 3,87,574 as compared to Rs. 13,88,144 Rs. 11,66,741 and Rs. 2,21,403 during the previous year.

In addition to the slight increase in the gross earnings the Railway has been successful in decreasing the working expenses as compared with last year's figures, thus reducing the percentage of working expenses on gross earnings from 84.05 to 72.12. The economic working is thus reflected in securing an increase in the percentage of net earnings on capital outlay from 1.37 to 2.40.

The coaching, goods and miscellaneous earnings during the year amounted respectively to Rs. 6,74,633, Rs. 6,22,222 and Rs. 93,504 as compared to Rs. 6,50,047, Rs. 6,36,256 and Rs. 1,01,841 during the previous year. An increase of Rs. 24,586 in the coaching traffic during the year under review is due to more and more pilgrims being attracted to visit Dwarka.

The gross earnings of the Jamnagar & Dwarka Railway during the month of June, 1933, amounted to Rs. 1,44,525 as compared with Rs. 1,23,309 during the same month of the previous year. The working expenses during the month amounted to Rs. 82,811 as against Rs. 71, 362 during the same month of the preceeding year leaving a net income of Rs. 61,724 as compared to Rs. 51,947 last year. The total coaching and goods earnings during the month amounted to Rs. 55,008 and Rs. 83,170 as compared to Rs. 51,335 and Rs. 65,497 respectively during the same month of the last year.

The cumulative gross earnings, working expenses and the net earnings for the period from 1st April to 30th June amounted to Rs. 3,95,148; Rs. 2,27,636 and Rs. 1,67,513 as compared to Rs. 3,70,935; Rs. 2,17,946 and Rs. 1,52,989 respectively during the corresponding period of the preceding year.

The percentage of working expenses to the gross earnings during the month under review was 57.20 as against 57.87 during the same month of the last year.

STATE RAILWAY EARNINGS.

The total approximate gross earnings of all State-owned railways for the week ending 30th September, 1933 (26th week) amount to Rs. 151 lakhs, Rs. 1 lakh MORE than the figures for the last week and Rs. 1 lakh LESS than the figures for the corresponding week of the previous year and Rs. 10 lakhs MORE than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April, to 30th September, 1933, amount to Rs. 40.54 crores or Rs. 81 lakhs MORE than the figures for the corresponding period of the previous year and Rs. 14 lakhs LESS than the corresponding period of 1931-32.

A comparison with the figures of the previous week for the principal State-owned Railways shows INCREASES in the approximate gross earnings of the Burma, G.I.P., N.W., S.I., and Tirhoot and Lucknow-Bareilly. A comparison with the figures of the corresponding week of 1933 shows DECREASES in the approximate gross earnings of all the principal State-owned railways except B.B & C.I., Burma, G.I.P., S.I., and Tirhoot and Lucknow-Bareilly.

The following are the approximate ordinary working expenses including suspense but excluding appropriation to and from depreciation fund of the State-owned Railways from 1st April to 31st August, 1933, as compared with the actuals of the corresponding period of last year.

	Up to 31-8-32 (in lakhs) Rs.	Up to 31-8-33 (in lakhs) Rs.

Total	1,915	1,938

INDUSTRIAL DISPUTES.

During the month of August, 1933, there were eight industrial disputes, six in Bombay city, one at Viramgaum and one at Dhulia. The number of workpeople involved in these disputes was 6,362 and the number of working days lost (*i.e.*, the number of workpeople less workers replaced multiplied by the number of working days) was 49,574.

The highest peak (4,243,194) in respect of the number of working days lost through strikes in the Bombay Preidency since April, 1931, was reached in May, 1928, whereas the lowest level was reached in December, 1927, when no strikes were reported. The nearest approach to this was in February, 1931, when only 103 working days were lost.

WORKMEN'S COMPENSATION.

Of 58 cases under the Workmen's Compensation Act disposed of in the Bombay Presidency in August, 1933, 51 were dealt with by the Commissioner for Workmen's Compensation in Bombay. The gross abount of compensation awarded in lump sums was Rs. 17,367 as against Rs. 13,652 in the previous month and Rs. 23,323 in August, 1932. Of the 58 cases in which compensation was claimed fifteen were in respect of fatal accidents, 41 in respect of permanent partial disablement and two in pespect of temporary disablement. Twenty-two of the cases arose in the textile industry and thirty-six in other industries. The corresponding figures for August, 1932 were 39 and 23.

The total number of injured workmen in respect of whom compensation was claimed during the month was 58, of whom 57 were adult males and an adult female.

Of the cases disposed of during the month 25 were original claims, 32 registrations of agreements and one a miscellaneous application. Compensation was awarded in 18 original claims, agreements were registered in 32 cases and seven original claims were dismissed.

COST OF LIVING.

In August, 1933, the working class cost of living index number for Bombay, on base July, 1914, equal to 100, remained stationary at 103. The food index declined by one point to 49 owing to a fall of two points in Pulses and of one point in other food articles. The index number for the Clothing group fell by three points to 113.

During August, 1933, the Ahmedabad cost of living index number, with the average prices for the year ended July, 1927, equal to 100, remained stationary at 73. The food index advanced by one point to 64. The index numbers for the Clothing and the Fuel and lighting groups fell by one and seven points respectively during the month.

In August, 1933, the Sholapur working class cost of living index number, with the average prices for the year ended January, 1928, equal to 100, was 70, the same as in the preceding month. The food index remained unchanged at 60. The index number for the Fuel and lighting group advanced by five points to 99.

In August, 1933, the Nagpur cost of living index number, on base January, 1927, equal to 100, declined by one point to 58. The food index remained stationary at 56 in spite of a fall of one point each in Pulses and in other food articles. The index numbers for the Clothing and the Fuel and lighting groups dropped by one and two points respectively.

The Jubbulpore cost of living index number for August, 1933, on base January, 1927, equal to 100, was 55 the same as in the preceding month.

During the month of July, 1933, the cost of living in Bihar and Orissa showed a general rise in all centres. The general rise was, however negligible, varying between 1 and 4 points only. The price of clothing continued to remain stationary in all centres except Jamshedpur. As compared with the corresponding month of the previous year the cost of living was lower by 3 points at Patna, by 2 points at Muzaffarpur, by 4 points at Monghyr, by 8 points at Jamshedpur and Cuttack, by 24 points at Jharia and by 14 points at Ranchi. The percentage of fall below the pre-war normal level was at Patna and Muzaffarpur, 2 at Monghyr, 5 at Jharia, 16 at Cuttack, 10 at Ranchi, while Jamshedpur continued to record a rise over the pre-war level by 9 per cent.

During the month under report Cuttack continued to be the cheapest centre for a workman to live in, while Jamshedpur continued to be the dearest. The difference between the two extremes was about 39 points as against 38 points in the previous month.

WORLD OF INDIAN FINANCE

Calcutta, October 27.

Money has been quite easy, thanks to poor investment in Treasury Bills and also to the surplus cash left in banking circles as a result of sales of T.T. effected during the two hectic days when banks experienced a squeeze in Bombay. The re-transfer of the funds so brought down has not been altogether easy as the exchange market has been rapidly slipping away. In one sense, it may be said that the erratic fall of the rupee-rate in the current week was, in large part, due to the remittance pressure caused by the need to repay London advances. Our own view, therefore, is that a portion of the London funds does still remain in India. If this view is correct, this may be said to be a potential bearish factor in the exchange market. Nor are other symptoms more satisfactory from the point of view of the rupee-rate. It also looks as though the gold stream is drying up. Our Bombay Correspondent gives comparative figures of gold exports from the Western Port for three weeks, and it would be noticed that both in volume and force, the gold current has slackened considerably. Whether this decreased activity in regard to gold shipments is only a temporary phase due to causes like the higher rupee prices of gold on parity with world prices or whether this really betokens the "tapering off" of gold exports is a matter on which it is very difficult to express an opinion. For our part, we shall not be surprised if, over the coming weeks, the average gold exports in a week fall short of Rs. 50 lakhs. The quantity of gold in the hands of people who have been hit severely by the depression could not have been unlimited. We have never wavered in our opinion that the most part of our gold exports is represented by distress gold. On this assumption, we have to believe that this distress gold has been the mainstay of the rural parts for nearly 2½ years. It may reasonably be concluded that even this last reserve must now have been used up to the full. Not much of distress gold need be expected in the future months. As for the gold that, we are told, was being disposed of for the alluring profit of the premium, those who were in this happy position should have disgorged their holdings and pocketted their margins in earlier stages. This means that even of this description of gold, not much could be forthcoming in the future.

We feel, as though instinctively, that we are very near the end of gold exports from India. This is a grave statement to make from all points of view. In the first place, there is the mournful significance that all the reserves of the population are by this time exhausted; that there is no sign of any improvement in the economic situation; and that if this depression should persist longer, the people in the upcountry parts would be in the most helpless and hopeless condition. In the second place, the monetary and financial comfort of the Government, which was based on gold exports (that is, which was based on the very distress of the population) must suffer a change. The authorities will now have to wake up to the naked reality of an anæmic surplus on merchandise account without the extraneous surplus of gold exports being available. Only when gold exports cease would our authorities realise the seriousness of a position in which a country, which used to have a merchandise surplus of Rs. 70 crores to Rs. 80 crores and which does need a merchandise surplus of this size for the normal remittance requirements, has been reduced to a condition in which the merchandise surplus was a bare Rs. 3 crores last year. Gold exports acted as a kind of opiate. They lulled the Finance Member and his colleagues into a sense of false security. Once the gold shipments fall off, the Government dare not postpone careful and comprehensive consideration of the deterioration in our merchandise position. Gold exports were an unmixed blessing to the Government. This cessation would be a painful reminder of the actualities. It may be that we are necessarily and prematurely apprehensive in this matter of gold shipments. But, after all is said and done, it is instinct and sentiment, rather than any proven facts, on which we have to rely for gauging the future trend of gold exports. Our instinct and sentiment tells us that the end of gold exports is nearing. The happenings of the last four weeks go a long way to confirm this impression.

On many an occasion since gold exports started in October, 1931, the banking community was assailed by doubts of this kind. As it proved to be a case of false alarm in those cases, the financial world has been, over the past few months, looking upon gold exports as a factor that may be expected to continue without interruption. The developments in the

current month are calculated to set the market athinking. From the point of view of Government finances, this uncertainty about the gold outlook occurs at a time when Treasury Bills borrowing has become dearer, when London discounts have been rising rather steeply and when the money market outlook in Britain appears suddenly difficult. Nor is the international situation less discouraging. The President of the United States made an important pronouncement on October 22. The world markets were startled by the exact terms of this policy, though, if the matter had been considered more carefully, it would have been easily realised that the present stage of President Roosevelt's policy is an integral part of the National Recovery Plan. We were told, on the first day, that conservative circles were aghast. The plan of Mr. Roosevelt was described as Utopian and unworkable. By all tokens, clear understanding has now set in. The first shock is over. It is now possible to say that dollar prices are bound to show substantial improvement in the immediate and near future. There is also cause for hope that the markedly upward trend of American prices will exercise a sympathetic effect on world prices. That is, at any rate, how the Indian markets have interpreted President Roosevelt's announcement.

Though it may be possible to speak with some measure of certainty about the outcome of America's new policy on prices, speculation is rife as regards the future of international exchanges, the future of the price of gold and the future of international gold standard. If the dollar will depreciate further, what is the utmost limit of depreciation that is expected? If the dollar depreciates to a considerable extent, what will be its effect on the value of sterling in terms of gold? Will France be able to remain wedded to gold standard? Will Belgium, Holland and Switzerland be able to bear the strain? Amidst perplexities of this kind, grave tidings about the French budgetary position and the fall of the French Government was received. The immediate effect of these two developments would have been to weaken francs considerably as a result of sales of francs both by French nationals and foreigners. It is the American policy of the depreciation of the dollar that has stood in the way of the repatriation of capital from France. While it were mere speculation and guesswork to attempt to foresee likely developments in regard to franc or sterling or gold, it seems possible to make a definite interpretation of American events and to derive hope that they will be such as to hasten the solution of the perplexing problems of the world. Eavesdropper discusses the American situation in the Clive Street Gossip section; and he indicates four stages in the American plan. He expects that the final stage will be reached in the Spring of 1934. If the final stage in the form in which he visualises is reached by April or so, one may reasonably hope that the scucess of the American experiment may be an incentive to the launching of like experiments in other important countries of the world with like favourable of fact, countries of the world with like favourable results.

Meantime it is satisfactory as our commercial correspondent reports that President-Roosevelt's announcement of October 22 has been construed as a bullish factor in the Indian commodities markets in general. As a matter of fact, there has been a long spell of depressing and depressed conditions in all the markets; and trade circles were waiting for something new. That "something new" was afforded by Mr. Roosevelt's statement of his new policy. With this announcement there has been a rise in cotton from Rs. 185 to Rs. 191. Jute has improved from Rs. 25/8 to Rs. 27/4; and hessians from Rs. 8/8 to Rs. 9/2. Wheat and linseed have also registered rises from Rs. 2/4 to Rs. 3 and from Rs. 4 to Rs. 4/4 respectively. Silver from the level of Rs. 56-2 has advanced to Rs. 56-10. There has been a steadier undertone in shellac and wool. Coal, though not directly affected by American events, has been a shade firmer in sympathy with the general rise. Sugar, being regulated by internal factors, has remained more or less unaffected. The undertone, however, is far from bearish. The general tendency is towards a healthier market though there is no exception of any sensational rise.

The exchange market sank fast and quick to 1s. 5 15/16d., in Bombay and 1s. 5 31/32d., in Calcutta early in the week. Since then there has been a recovery. There were no sterling tenders received. The position at the present moment is extremely difficult to understand. It is almost hazardous to discuss the future.

The closing rates are: 1s. 5 31/32d., to 1s. 6d., October-November T.T.; 1s. 5 31/32d.; December-February T.T.; 1s. 5 15/16., March-June T.T.

Three Months Bills may be quoted: 1s. 6 3/32d., up to December; 1s. 6 1/16d., January-March and 1s. 6 1/32d., April-June.

Interbank call money has been easy with plentiful lenders at ½ per cent.

Firms' money for call, 3 days notice and 7 days notice may be quoted ½ per cent. Onemonth, twomonth and threemonth deposits may be quoted 1, 1¼ and 1½ per cent.

Term deposits are difficult to place, bankers being in no mood to bid for them.

OTHER INDIAN MONEY MARKETS

Madras, October 26.

Exchange rates fell away and at one time nothing better than 1s. 5 31/32d., was obtainable for cash. Since then, a rather steadier undertone is evident and 1s. 5 31/32d., is now available for telegraphic transfers to the end of the year with buyers at 1s. 6 1/32d. Small business however has been done at 1s. 6d. A few export bills were placed at lower levels but, otherwise, little business has passed.

Money has bees easy at 1 per cent. with lenders preponderating.

FINANCE ABROAD

		Sterling Dollar rate	Sterling Franc rate	London Price of gold
October	20 ...	4.54½	80.93	132s. 0½d.
,,	21 ...	4.50⅛	82.53	129s. 11d.
,,	23 ...	4.52⅜	81.96	129s. 0½d.
,,	24 ...	4.64	82.12	128s. 6d.
,,	25 ...	4.68¾	81.93	129s. 2d.
,,	26 ...	4.77¼	80.80	128s. 1d.

Both the sterling-dollar and the sterling-franc rates have shown marked oscillations during the week. But while the latter has gone down steadily much below the level of the opening of this week, the sterling-dollar rate has gone up steadily from 4.54½ on October 20 to 4.77¼ on October 26. It is sometime since the movement in these two international exchanges became somewhat closely inter-related. The strengthening of sterling against the dollar has more often than not been quickly reflected in a strengthening of the franc in terms of sterling. And during the week the weakness in the dollar has to be attributed primarily to the announcement of Mr. Roosevelt's monetary policies and programmes. A full, authentic, and even self-consistent account is not yet available of the measures announced by Mr. Roosevelt in his broadcast talk. All that one is able to gather from the messages so far received is that President Roosevelt has announced the readiness of his Government to buy and sell gold in America and abroad at appropriate prices, with a view to eliminate disturbances from foreign influences in the value of the dollar. More than that it is difficult to divine. But it may be said that this policy is quite understandable as much as it fits in with our ideas of what President Roosevelt might be prepared to do by way of monetary reform in the present juncture.

We have always held that the President is anxious to avoid the necessity of making a hide-bound decision when the recovery administration is still in a flux and its prospects still doubtful. We conceive that the ideas of President Roosevelt in regard to monetary policy are somewhat on these lines. He has, perhaps, started with the idea, which we have expressed in our columns repeatedly, that the belief in the ability of sound money to correct all economic mal-adjustments is only a survival of the *laissez faire* notions of the 19th century and that emphasis on monetary reform to the detriment of conscious economic adjustments has been overdone in the past. Secondly, as he himself has repeatedly emphasised both during the course of the World Economic Conference and since, if there is anything valuable in the sound money theories it is that the value of money should be such that the repayment of loans over a period should involve no injustice either to debtor or creditor. Then the stability of the foreign exchanges can assume an importance only secondary to that of the stability of internal prices.

In their practical application to the present conditions of American economy there is involved necessarily the question of the time, manner and measure of the changes suggested. If the dollar represented in goods and services much more than sometimes ago, there is unquestionably the need for its devaluation ; and devaluation involves a degree of inflation. But everything would clearly depend upon the extent of the inflation and the manner of the time chosen for every fresh inflationary dose. In the beginning, President Roosevelt found that mere talk of inflation and freedom from any obsession regarding the stability of the exchanges, should suffice to give an upward support to stock and commodity prices and create some measure of activity in the economic system which showed but little signs of life. But now that actual inflation has come to be necessary in the interest of retaining the gains already achieved and making more, President Roosevelt's steps have necessarily to be more wary. There is no doubt that the President is prepared for stabilising the dollar, as soon as he is convinced that its value on the basis of internal prices is equal to its value at a given period in the past, and that, therefore, monetary transactions could be effected without any appreciable injustice to any of the parties involved.

He is therefore adroitly paving the way for such an end. The start was made when the embargo on the export of gold amalgams and precipitates was lifted. The next step was taken when the Treasury was authorised to acquire newly made gold in America at prices based on the value of the dollar in terms of gold currencies. Now the latest announcement shows that the Administration is prepared to buy and sell dollar in the interest of preserving the value of the dollar from foreign influences. This shows clearly that the President has little or no interest in the value of gold in foreign currencies and that the operations in gold are undertaken only with a view to ensure that the value of the dollar at the level, which he deems to be desirable, is not disturbed by conditions which are foreign to the said needs of American economy. We do not see anything objectionable in this policy of President Roosevelt. Criticisms adverse or favourable, suggest themselves, only when one allows oneself to conjecture other measures which this might lead to. There are some who envisage the possibility of an early establishment of the Exchange Equalisiation Fund with a view to keep the dollar stable. There are others who think that before long we shall hear of a definite devaluation of the dollar to be followed thereafter by the creation of the machinery for preserving stability of exchange. All that this offer to buy and sell gold means for the present is the desire of President Roosevelt to ensure freedom of monetary action for himself within his own country. He is at present probably engaged in seeing that the more extreme inflationist and anti-inflationist forces more or less balance themselves, so that he is free to persist in his policy of experimental approach. It is curious how criticism of the present monetary policy of President Roosevelt is mixed up with criticisms of his action in regard to the cotton mill industry or the newspaper concerns. It should suffice so far as the subject of these columns goes, that President Roosevelt is yet treading cautiously on the treacherous pathways that make up modern national policy in affairs monetary.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Thursday, Oct. 26.

During the week under review jutes shares were steadier with a fair amount of enquiry for coals. Teas were also steady. In Government securities quiet conditions prevailed. 3½ per cent. Paper was marked back to Rs. 82-9, there was also some demand for 5 per cent. 1945-55 at Rs. 113-12, with some business reported in 5 per cent. in 1940-43 at Rs. 106-1. 4 per cent. 1960-70 loan quoted Rs. 98-4, and 5 per cent. 1935 Rs. 104-2.

Jute.—Jute shares were steady, Howrahs opened steady at Rs. 48, but fell back to Rs. 47-4, Kamarhattys fell back to Rs. 466, Anglo-Indias had some enquiry at Rs. 350 Unions at Rs. 360, Barnagores quoted Rs. 116, Megna Rs. 21, Standard Rs. 296-8, Nuddea Rs. 18-8, National Rs. 21, Champydany Rs. 129, Kanknarrahs Rs. 407-8 and Lansdowne Rs. 115.

Coal.—In coal shares there seemed to be more sellers in evidence and prices were inclined to be on the downward grade. Bengals were dealth in at Rs. 288, Burra Demo had sellers at Rs. 4-4, South Karanapuras eased to Rs. 4-14, Raneegunge kept steady at Rs. 40-4, Bhulanbarare Rs. 8, Equitables Rs. 20-8, New Beerbhoom Rs. 11-14, Kalapahari Rs. 11-4, Samlas Rs. 2-4, Standard Rs. 28-12 and Ghusick and Muslia Rs. 3-8.

Cotton.—Cotton shares were unchanged Kesorams quoted Rs. 3-2, Bengal Nagpurs Rs. 18 3/8, Mohini Rs. 8 7/8, Muir Rs. 250 and New Ring Rs. 69.

Tea.—Tea shares were quiet and there were no transactions of importance. Bishnauths quoted Rs. 25-2, Kurseong and Darjeeling Rs. 22-8, Phasokwa Rs. 81, Rajabat Rs. 38-4, Rutema Rs. 8-2 and Soom Rs. 15-12.

Banks and Railways.—Imperial Banks fully paids quoted Rs. 1,220 and the Contributories Rs. 303, Allahabads Rs. 337 and Rs. 160 respectively, Central Bank Rs. 24 and the Bank of India Rs. 103½. In Railway shares Shahdara (Delhi) Saharanpur Light Rly. Rs. 120, Darjeeling Himalayan Rs. 71, Howrah Amta Rs. 91, Burdwan Cutwa Rs. 74.

Miscellaneous.—Bengal Iron came to business at Rs.3-2, Indian Iron and Steel at Rs. 4-6, Bengal Teiephone Rs. 17, Triton Insurance Rs. 185, Indian Galvanising Rs. 9, Indian Paper Pulp Rs. 111, Spence's Hotel Rs. 1-3, Kluang Rubber Rs. 5-8, Patna Electric Rs. 14-10, Shahjanapur electric Rs. 6-4. In sugar shares Cawnpores were marked back to Rs. 31-12, Carew & Co., changed hands at Rs. 14, and Champaran at Rs. 23-8.

MADRAS STOCK EXCHANGE.

(*By Wire.*)

(From Our Correspondent).

Madras, Oct. 26.

The securities market was erratic with a good enquiry from Calcutta. Paper touched Rs. 83-6 but fell away rapidly on the news of the French political crisis. Considerable business, however, was done around Rs. 82-12 on short covering. The closing tone was uncertain at Rs. 82-12 but there was a steady enquiry for 1960-70 loan at Rs. 98-2, 1945-55 at Rs. 113-12, 1938-40 at Rs. 107-10 and Treasury Bonds at Rs. 106-11. Medium dated loans were marked down with more sellers in evidence. The 1938 Mysore bonds changed hands at Rs. 109-8, and 6½ per cent. at Rs. 115-8, there was also some enquiry for the other issues. 5 per pent. 1946 Madras Corporation debentures were taken up at Rs. 105-12 with buyers over. Coimbatore spinning and weaving debentures were done at Rs. 195 with further sellers at this price. Spencers "A" preference were transacted at Rs. 9-8 closing better at par. Tata steel (2nd pref) were done on several occasions at par but they were down at Rs. 99 at the close.

There was good enquiry for Bank shares. Hindusthans were marked at Rs. 30, Centrals at Rs. 24, Indians Rs. 19 for the big and Rs. 18-14 for the small. Mill shares were steadier. Buckinghams gained four points at Rs. 179, Bangalores were done at Rs. 82 with buyers out at this price, Gokaks after the closing of the Bombay market were transacted for the first time at Rs. 110. Cement shares were dull and Sugars quieter. Deccans fell to Rs. 265 for the old and Rs. 64 for the new and a further fall is anticipated. The Planting section excited more interest. Cochin Malabars were done at Rs. 1-1, Malankaras at par, Thirumbadis at Rs. 3 and Peria Karamakais at Rs. 32.

In the Miscellaneous section Burma Corporations were done at Rs. 9-2 and Singareni at Rs. 8 with sellers over. Most sections closed quiet.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bombay, Oct. 26.

Giltedge securities continued to evince a dull tendency with sellers predominating owing to grave political situation on the Continent and lower advices from London. On Wednesday the rate of 3½ per cent. Government paper had closed at Rs. 83-2, on Saturday it touched the highest at Rs. 83-6, on Calcutta buying but on Tuesday it sagged down as low as Rs. 82-7 on reports of the resignation of the French Cabinet over Budget issue. It again steadied and came up to Rs. 83 but later due to heavy selling touched Rs. 82-8 but closed at Rs. 82-9.

With the approach of the next settlement of the Board of Directors, the Stock Exchange is much worried over standing transactions of the Currimbhoy group mills. A scheme has been evolved to relieve brokers who have bought shares, the Stock Exchange itself taking up the burden. An Extraordinary General Meeting of the Stock Exchange will be held this Saturday to confirm the scheme. In the meantime forward transactions continue to be banned. Cash deals have been going on but business has been much restricted. Rates, too, have weakened from closing levels. Tata Steel second preferences, have come down from Rs. 100-8 to Rs. 99-8, Burma Petrol from Rs. 2-14 to Rs. 2-13, Scindias from Rs. 10-1 to Rs. 9, New India Assurance from Rs. 26-10 to Rs. 25-8, Laxmi Cotton from Rs. 785 to Rs. 740 and Sholapurs from Rs. 3,200 to Rs. 3,060.

JUTE AND JUTE GOODS

JUTE

The market during the current week has ruled quiet but steady with a small advance in values over the past week. Business in ready firsts was done at Rs. 24-4, Rs. 24-8 with buyers over, sellers towards the close asking Rs. 25. Business in loose jute was done at Rs. 4-4 and Rs. 3-12 for supervised Jat L. R. and X. L. R. per maund.

Long interests are carrying their holdings in anticipation of higher prices. But the business so far reported done is not very encouraging. Arrivals from up country continue as usual; but there is a distinct reserve visible with sellers. Goods market has ruled very steady and there has been a considerable rise in the values of hessians as well as heavy goods.

Commodity markets in general, at home as well as abroad, have shown firmer tendency after decline, consequently the undertone in jute has been steady, and it would not be surprising if the market takes an upward trend and goes up by a couple of rupees for bale in the course of next week or so. Anyway the declining tendency is arrested and a resistance for fall is clearly visible.

JUTE MANUFACTURES

A very sharp rise in the values of hessians has taken place in the course of the week. The highest and lowest for November nine porters being Rs. 8-7 and Rs. 8-15. The rise has been due to heavy bear covering, buying by a big speculator on American reports.

On Tuesday news was received that the farm administration after studying the plan for compensatory tax on jute bagging to equalise the 4.2 cents. per lb. process Tax on cotton are likely to recommend 4-5 cents. per lbs. tax on Jute. It was a bombshell in the jute and jute goods market and values of jute sharply declined from Rs. 26-8 to Rs. 25-12 and that of hessians from Rs. 8-13 to Rs. 8-9. Later on, however, the market recovered on the clarification of the position that no official announcement was yet made about the process tax, and that it was only an indication. Even if the tax was to be levied it will not be levied before January next. It was only a speculation, if the tax, if it at all comes will be 4-5 cents. per lb. or less.

The markets in general have been a bit cheerful during the week on account of President Roosevelt's broadcast speech, about the reduction of value of gold and making efforts to raise the price of silver. Consequently there has been a bullish feeling in grains, seeds and other commodity markets. Hessians in particular have ruled very steady due to better advices from North as well as South America. Heavy goods naturally in sympathy with hessians have ruled steady and values are higher by eight to twelve annas. The prices have been so low that even the veteran bears are inclined to be bull at these levels. For this reason there has been a distinct resistance for a further fall.

Total reported sales for the week ending Saturday the 21st October, 1933.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, Oct. 26.

American cotton rates remained quiescent till the close of last week when there appeared signs of an upward tendency due to the new gold policy of President Roosevelt. This is also due to the inflationary effect of the dollar depreciating from 4.53 to 4.76. Trade and speculative buying and foreign investment have appeared but on the other hand more selling flows in uninterruptedly. Local Broach moved between Rs. 186-12 and Rs. 191-8 and operators were bearishly disposed despite the likelihood of an early settlement with Japan over the boycott issue.

As reported last week the Indian Cotton market has ruled very narrow with small daily fluctuations. The outlook of the Indo-Japanese settlement is not so disappointing. The sentiment in U.S.A. markets is bullish. Consequently the market is well supported at declines.

The effect of local trouble in Bombay with Currimbhoy group is more or less discounted and the fixing of rates by the stock exchange for delivery as well as settlements has removed the uncertainty and nervousness from the market. But there is no improvement in demand either from the local mills or from the continent and far east. The crop situation is very satisfactory and hedge sales are plentiful The piecegoods and yarn markets are idle and the demand for Diwali requirements even was far below the expectation.

Taking all these factors into consideration it appears that there is no reason for fearing any precipitate fall in cotton but at the same time any sensational rise also is far from the sight at the moment. Buying at dips is however not undesirable.

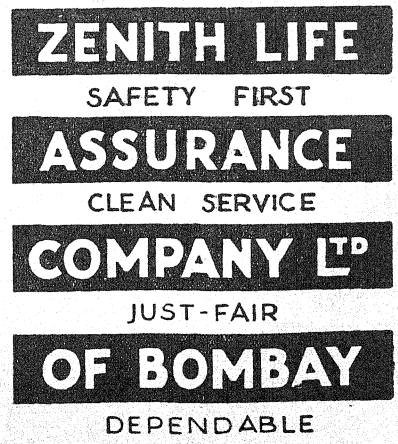
PIECEGOODS

The market has ruled slightly better during the earlier days. Later however the market has ruled quieter with only a small business passing. ...

News received from Delhi goes at show that Indi-Japanese talk is more near to a settlement than what it hitherto was. The Japanese delegation is willing to accept an import quota of 1.5 million bales against a 300 million yards piecegoods imports. The import duty is to be fixed at 55 per cent. on the basis of the existing yen, with a proviso to increase it in proportion to the further depreciation of the yen.

The Indian Mill owners are very much perturbed and their representatives are reported to have addressed their feelings to the Commerce member. It is feared that if in pooportion to the reduction in the imports duty on Japanese a reduction is made in favour of British Goods the Indian Cotton Mill Industry is going to suffer very seriously.

Pending these negotiations there has been very little fresh business passing, either in indigenous or in foreign goods. There has been small business done in replacements for umbrella clothing, shirtings and like. Apart from this there has been no business worth the name.



BULLION

GOLD
(By Wire)

(From our correspondent)

Bombay, Oct. 26.

Gold.—Local operators were somewhat heartily disposed anticipating that France may go off the Gold Standard. The French Cabinet over the budget issue was viewed with alarm but later assurances having been given out that adequate measures will be taken to balance the budget the franc has again steadied. Meanwhile the new monetary policy of Roosevelt to buy gold within states at rates higher than those prevailing in Continent has stiffened gold prices everywhere. Yesterday initial offer for newly mined gold in America has been fixed at 31.36 dollars which is equivalent to £6-11-2½, whereas the rate in London was fixed at £6-10-1 including a premium of 100 on the franc exchange. Local rate for gold did not go lower than Rs. 32-2 and was being quoted to-day at 5-30 p.m. at Rs. 32-9-6 for ready after touching Rs. 32-11-6.

Gold.—Goodly fluctuations are taking place in the gold markets in London as well as Indian markets following the fluctuations in the London Paris exchange. On the appreciation of the sterling during the last week gold had touched Rs. 32_4 in the local market, Banks then were buyers at Rs. 32 only. Since then there has been a slight recovery and values have gone up slightly.

Stocks in Bombay continue to remain at 4 lakhs tolas daily offtake remaining at 2,000 tolas only. The tendency of the market though uncertain is but bearish.

LONDON **(Air-Mail Week.)**

Gold reserve against notes of the Bank of England was £190,376,131 on the 4th inst. which was also the figure for the previous Wednesday.

In the open market the amount of gold available was more moderate. Though the demand from the Continent continued, the premium over the franc parity showed a tendency to diminish.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 2nd instant to mid-day on the 9th instant :—

SILVER.
By Wire

(From Our Correspondant)

Bombay, October 26.

Silver.—Dull tone prevailed until yesterday when on anticipations that Mr. Roosevelt may next devote his attention to the silver problem, rates were raised by five annas.

The latest rates for November and December settlements at 5-30 P.M. to-day are Rs. 56-4-6, Rs. 54-6 and Rs. 56-9-6.

Silver.—Easier conditions have prevailed in the silver market with minor day to day fluctuations. The highest and lowest of the week were Rs. 56/8 and Rs. 56/4 per 100 tolas. There has been small business in London market.

Stocks are still heavy being estimated at 9000 bars in Bombay and 1000 bars in Calcutta. Daily off take is placed at 25 to 30 bars taken both the places together. The tendency of the market is bearish.

TEA

Sale No. 19 was held on 23rd and 24th October when 20,700 packages of tea with exports right, 8,800 packages of tea and 6,000 packages of dust for internal consumption were sold at annas 9 and Rs. 4-4, 4-10 per lb. respectively.

Demand was strong for Broken Pekoe, and Broken Pekoe Souchong, and the market for them was fully firm to dearer. Common leaf were not much sought after.

There was good demand for internal consumption and competition was quite keen. Fannings were not so well supported but Dusts met a strong demand and values advanced by 2 to 3 pies per lb.

The following are the full particulars of Sale No. 19.

Teas with Export Rights

	1933.	1932.	1931.
Offered	23,159	29,700	35,500

LONDON TEA SALES

At the London auctions on October 23, 27,200 packages of Indian tea were submitted for sale. The tendency was quiet but later, competition improved and prices were generally steady.

The following were the lowest prices fetched during the day's auction:—

	Last auction	To-day's auction
Common Pekoe	10½d.	10½d.
Common Broken Pekoe ...	10½d.	10½d.
Common, Orange Pekoe ...	11d.	11d.
Common B. O. Pekoe ...	10¾d.	11d.
Common B. P. Souchong ...	10¾d.	10¾d.

The following are the value prices:—

Clean Common Pekoe	10⅞d.	10⅞d.
Clean C. B. Pekoe	11d.	10⅞d.
Clean C. O. Pekoe	11⅛d.	11⅛d.
Clean C. B. O. Pekoe	11⅛d.	11¼d.
Clean C. B. O. Pekoe	11⅛d.	11¼d.
Clean C. B. P. Souchong ...	11d.	10¾d.

JAVA TEA SALES

At the London auctions on October 19, 5,300 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition, especially for exportable sorts, which were generally higher. Other teas were steady.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10d., to-day's auction 8½d. lb.; Common Broken Pekoe last auction 7½d., to-day's auction 7d. lb.; Common Orange Pekoe 10d., to-day's auction 9d. lb.; Common Broken Orange Pekoe last auction 8½d., to-day's auction 8¾d. lb.; Common Broken Pekoe Souchong last auction 9½d., to-day's auction 9½d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10d., to-day's auction 10d. lb.; Clean Common Broken Pekoe last auction 9½d., to-day's auction 9¾d. lb.; Clean Common Orange Pekoe last auction 10⅝d., to-day's auction 11d. lb.; Clean Common

Broken Orange Pekoe last auction 10½d., to-day's auction 10½d. lb. ; Clean Common Broken Pekoe Souchong last auction 9½d., to-day's auction 9½d. lb.

AVERAGE PRICES

The following were the average prices of tea in the London market during the week :—

Indian tea (Northern) last week 14.42d., this week 14.08d. lb. ; Indian tea (Southern) last week 13.11d., this week 13.16 lb. ; Ceylon tea last week 17.32d., this week 17.67d. lb. ; Java tea last week 10.90d., this week 10.85d. lb. ; Sumatra tea last week 9.45d., this week to follow.

FOR SALE NEXT WEEK

Indian : 51,500 packages, of which 49,700 are on garden account. Ceylon : 22,100 packages of which 21,800 are on garden account.

According to the All-India Second Sugar cane forecast for 1933-34.

The area, so far reported, this year comes to 3,349,000 acres, as against 2,998,000 acres reported at this time last year, or an increase of 12 per cent.

Weather conditions have been favourable except in the most important cane growing tract, *viz.*, the United Provinces, where the crop has suffered from excessive rains and floods. The condition of the crop elsewhere is, however, reported to be good.

The detailed figures for the provinces and States are as follows :—

	Second Forecast, October.		
United Provinces (*a*) ...	1,791	1,652	+139
Punjab	510	460	+50

(*b*) Not available.
(*c*) Excluding Bhopal from which report has been received for the first time this year.

Sugar in Foreign Countries.—From the latest information received from the Sugar Technologist to the Imperial Council of Agricultural Research, India, Cawnpore, it appears that the world's production of sugar, both cane and beet, in 1932-33 is estimated by Messrs. Willet & Gray at 24,230,000 tons, showing a decrease of 2,054,000 tons (1,340,000 tons in the case of cane sugar and 714,000 tons in the case of beet sugar), as compared with the preceding year. In Cuba, the final production of the 1933 sugar crop is placed at 1,995,000 tons. Planting operations of the new crop were retarded owing to heavy rains in July, but the deficiency is expected to be made up as more work will be done in the fields this year than has been done for several years past. In Louisiana, ideal growing conditions with a plentiful supply of moisture and sunshine have recently prevailed throughout the sugar district. The cane crop, however, is still backward in development and there appears now to be little chance that the yield will be more than the average. The forecast of the sugar production remains at 185,000 tons. In the Hawaiian Islands, a little over 80 per cent. of the estimated sugar outturn has been manufactured. The weather has recently been cooler than the average for this time of the year and the continuance of the comparatively cool weather since last autumn has affected the growth of cane of both the 1933 and the 1934 crops. It is accordingly expected that the estimates for the 1934 crop will show a reduction. In Porto Rico, the 1932-33 sugar crop amounted to 827,000 short tons (738,000 tons) of commercial sugar, showing a decrease of over 16 per cent., as compared with the 1931-32 crop due to the effects of the hurricane which swept over large part of the country in September last year. In the Argentine, the estimated production of sugar in 1932-33 is placed at 348,000 tons, as against 346,000 tons in the preceding season. In Mauritius, weather conditions for the new crop have generally been satisfactory and its total outturn is expected to be well up to the average of 220,000 tons, as against 247,000 tons in the previous season. In South Africa, although the drought earlier in the season had a serious effect, the high sucrose in the cane will ultimately result in a larger poduction than was first anticipated. It is expected that the total production wil finally turn out at about 378,000 tons. In Java, owing to the reduction in plantings, the current crop is likely to yield in the neighbourhood of 1,400,000 tons. It has recently been reported that cane plantings may be stopped altogether next year for the 1935 campaign. In Japan (including the island of Formosa), the production of sugar during the current year is estimated at approximately 810,000 tons, showing a decrease of about 29 per cent. as compared with last year. In Australia, the coming harvest is estimated at 562,000 tons (540,000 for Queensland and 22,000 tons for New South Wales), which is somewhat larger than last year but substantially below the record crop (about 605,000 tons) of 1931. In the Phlippines the preliminary estimate of the 1933-34 sugar crop is placed at 1,328,000 tons of centrifugal raw sugar, as against 1,122,000 tons produced in 1932-33, or an increase of 18 per cent.

In Europe, weather conditions are reported to have favoured the growth of beet roots and the formation of sugar at the expense of leaf development; and although excessive warmth and dry weather have caused withering in certain sections, the development of the plant has, on the whole, been satisfactory. A preliminary forecast of the beet sugar production in Europe excluding Russia for 1933-34, is placed at 6,106,000 metric tons (raw value) as compared with 5,599,000 tons in 1932-33. Crop conditions in Soviet Union are reported to be much better than last year, both as regards weight of roots and sugar contents. In the United States of America, weather conditions in July and August have improved the prospects for the beet crop

especially in the eastern beet growing area. The total yield of beet for the current year is estimated at 9,955,000 short tons, as against 9,070,000 tons in 1932. On the above basis and on the assumption of average recovery of the last season, the 1933 beet sugar production in the United States of America would approximate to 1,485,000 tons of 2,000 lbs. (1,325,000 tons). But continued improvement of growing season since the beginning of August indicates that above estimate is likely to be exceeded.

RICE

Rice Crop Forecast

According to the All-India First Rice Crop forecast published today,

the total area sown is reported to be 74,994,000 acres, as against 75,132,000 acres, the corresponding estimate (revised) of last year, or a decrease of 138,000 acres only.

Weather conditions at the outset were not quite favourable, but the present condition of the crop appears to be generally good.

The detailed figures for the provinces and States are as follows :—

Provinces and States	1933-34.	1932-33.	Increase (+) or Decrease (−)
	(1,000 acres)	(1,000 acres)	(1,000 acres)
Bengal (*a*) ...	21,154	(*d*) 21,230	−76

(*a*) Includes autumn and winter rice.
(*b*) Includes Indian States.
(*c*) Not available.
(*d*) Revised.

Rice Crop in Foreign Countries.—From information specially obtained, it appears that the official estimates of the first rice crop of Formosa for 1933 place the area and yield at 708,000 acres and 19,548,000 bushels (or 558,000 tons), showing an increase of 1 per cent. in area but a decrease of about 7 per cent. in yield as compared with the corresponding estimates, of 1932. The production of the rice crop of Japan for 1933 is estimated at 65,608,000 koku (or 9,202,000 tons), which is 8.8 per cent. more than the actual crop of 1932. The area planted in 35 provinces of the Inner Circles of Siam at the end of July 1933 amounted to 7,385,000 rai (or 2,954,000 acres), as against 6,257,000 rai (or 2,503,000 acres) at the same time last year. The condition of the crop is reported to be generally good.

From the latest available bulletin published by the International Institute of Agriculture, Rome, it appears that the production of the 1933 crop of the United States of America is estimated at 1,069,000 tons, showing an increase of 35 per cent., as compared with the 1932 crop. In Italy, the area sown for 1933-34 is 311,000 acres, as against 335,000 acres in 1932-33. The crop is in good growing condition. In Spain, the area and yield of rice are estimated at 116,000 acres and 290,000 tons, showing a decrease of 5 and 7 per cent respectively as compared with 1932.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

WORLD ECONOMIC SURVEY 1932-33

The publication of the *World Economic Survey* is as timely this year as it was in the last. In the third quarter of 1932, the business community all the world over was intent on knowing how far the signs of recovery, that were then visible, were reliable and how far they were transient and illusory. Mr. Condliffe's *Survey* was invaluable in confirming our reading of the situation a year ago, that businessmen would not be well-advised to base their programmes upon assumptions of an early revival of trade. For our part, we put this survey of 1932 for this purpose and on the present occasion, a survey of the economic developments and experiences of 1932-33 is sorely needed, because it takes an economic intelligence organisation of world-wide resources to take stock of the present position of world economy. To appreciate the difference between the position to-day and that of a year ago, it should suffice to point out that in September, 1932, the world continued to cling to the belief that a trade revival could be helped only by an international agreement, and that, though under the stress of the depression, many countries had been obliged to persist in the path of economic isolationism, ultimately the nations would come round to a common policy and programme of action. So long as it was possible to sustain that hope, the world knew, or felt it knew, in what direction its salvation lay.

The period covered by the present edition of the *Survey* is one, which is marked by consistent violations of the principles implied in any scheme of concerted international action for recovery. If we leave aside the purely economic factors and re-adjustment through a more natural process, we may say that so far as conscious policy is concerned, the year 1932-33 has been a period of severe retrogression. Even the prevalent sentiment became consciously optimistic by the end of this period. The third quarter of 1932, it will be remembered, witnessed signs of what were then regarded as an incipient revival. There was a mild recovery of prices. Export demand for the principal lines of primary products and manufactures was noticeable. Even production tended to improve ; and though these improvements did not synchronise in all the countries of the world, such improvements being earlier in one country and later in another, before the end of the year these signs of revival had entirely vanished out of sight. There was then a recrudescence of competitive currency depreciation. Japan's big offensive in the export markets of the world had been fairly launched ; and to crown all, the biggest gold mining countries in the world abandoned the gold standard and joined the race for currency depreciation. The first quarter of 1933 saw the thickening of the banking troubles of the U.S.A. and by the end of that period, it was clear that America would not continue her support of the Gold standard, and that her abandonment of gold was only a question of time. The implications and repercussions of a rapidly depreciating dollar were fully understood by the rest of the world and defensive measures were being formulated in the second quarter of the year by all countries, which had reason to apprehend a more powerful competition from the American rival. In so far as Mr. Roosevelt coupled his announcement of the embargo on gold with vigorous canvassing for the World Economic Conference, there was a ray of hope, that through an apparently nationalistic measure, America would really help forward the cause of international understanding in matters economic. The *World Economic Survey* covers the second half of 1932 and the first half of 1933. It may be said that the period saw the unmistakable fiasco of the World Economic Conference and the death-knell of the hope, that the nations might after all, come to an understanding, as to the way in which the economic depression should be treated.

* * *

We may thus put outside the pale of immediate consideration the possibility of the world lifting itself out of the depression by common effort. Even the Tariff Truce, which was the only circumstance which tended to encourage the hope of a successful termination of the World Economic Conference, has now been denounced more or less completely. Since the Conference dispersed, the forces of economic nationalism have reasserted themselves. Great Britain has taken up the broken threads of her policy of bilateral trade agreements. America has shown no sign of flinching from her determination to find her own economic salvation. The chaos of currencies and exchanges has been accentuated, even sterling, which was regarded as having found a new haven of stability, being dragged into the vortex of international disturbance. The more political problems of war debts are as hazy as a year ago; perhaps they disclose worse complications when the parties come to grips.

* * *

The student of the future trends of world trade and economy has, therefore, to fix his attention on the slower, but surer, processes of natural readjustment. Perhaps it would be useful to point out here, that trade revival can come about in only one of three ways. (1) Concerted international action calculated to eliminate the more serious obstacles to recovery; (2) wise economic planning within each country; and (3) natural correction of economic mal-adjustments. The first has to be ruled out; the second has its obvious difficulties in countries which have too close or too vital economic relationships with foreign countries; and the time, when self-sufficiency will not necessarily mean a reduction in economic prosperity, is yet far off. It is only in judging the world economic situation from the third standpoint that one would find the Survey to be particularly useful. No publication of the Economic section of the League of Nations has yet ventured on colourful comment; and where recommendations are made they are only in respect of the international monetary standard or international free trade. But the *Survey* is full of statistical material, presented in the form of tables, graphs, charts and diagrams. All the material has been handled in an orderly manner in order to bring out the major trends of world economy. And special attention is devoted to the question whether the mal-adjustments of the economic system are being corrected and, if so, to what extent.

* * *

It should be remembered that such correction of mal-adjustments is not necessarily inconsistent with a further decline in the volume and value of international trade. For we have not had a reversal of the trend of economic nationalism; and very probably we shall never have it. The worst feature of the present depression is that conditions are not only inimical to the maintenance, not to speak of the growth of international trade, but they are not more helpful to the working of even what may be called closed economic systems. We do not suggest that any country has, strictly speaking, a closed system. But even if there were one, such a country would find that the disagreement between costs and prices,

production and consumption, agricultural and industry, involve for the national economic Government difficulties which are not less serious or complicated than those which faced the World Economic Conference or the advocates of the resumption of the old trade relations.

* * *

We would prefer to see Mr. Condliffe treat the material at his command from two different standpoints: (1) economic readjustment calculated to help the resumption of traditional international trade relations; and (2) economic readjustment such as would make conditions in each country more helpful to planning without a too serious break from individualism, for, it must be remembered, that national economic planning does not necessarily mean a violent swing towards complete Socialism.

* * *

This Mr. Condliffe has not done, and possibly could not, as his view of the present nature and position of world economy would not admit of the separation of the national, from the international, standpoint presupposed in such criticism. "It is essential," Mr. Condliffe urges, "to realise that the real form which modern economic organisation has taken is neither that of a series of isolated national units nor that of a single economic world unit, but that of a series of partly closed, partly interdependent, national economies linked in shifting equilibrium to the changes in which are expressed by alterations in the rates at which the respective national currencies are exchanged. . . . The realistic consideration of economic problems is possible, therefore, only in this setting of national interdependence as distinct from either national economic independence or cosmopolitan dreams of world polity. . . . Nor is it possible to separate national from international equilibrium."

* * *

While we readily admit that the objective view of the present position of world economy precludes the assumption of any purely national or international order, we might still insist that at the present stage a study, from the standpoint we have suggested, would alone invest the Survey with a practical and formative value.

* * *

The difficulty of separating these two standpoints is, indeed, the key to all the complexities of our economic problems. In any attempt to foresee future trends we are up against the same difficulty of anticipating whether the increased complications will have the effect of driving the world further away from international co-operation or of reclaiming them for that ideal.

* * *

The experiences of 1932-33 are not helpful to the formation of any intelligent anticipation. The revival, which was noticeable in the third quarter of 1932, encouraged the assumption that the world would still grope its way back to some kind of international order. The recession chilled that hope; but again the knowledge that not all the gain was lost in the winter helped the survival of that hope. There were also small, but significant, changes in prices which are of the nature of economic readjustment. Side by side with the tendency of wholesale prices to improve, retail prices fell; wages and costs were coming down. Even debt charges in stray cases were reduced somewhat.

* * *

But again the clash of national and international systems reappeared in the stupendous efforts of President Roosevelt to set right the American economic system through isolated national effort. The first expression was the fall in the exchange value of the dollar; and the national and international price systems were again disorganised. Apart from the significance of the Roosevelt experiment to particular commodities and markets, the fate of the international monetary standard, which is perhaps the one matter which presents less difficulties of international understanding, still hangs in the balance. Mr. Condliffe aptly points out that during the earlier decades of this century the easy functioning of the international gold standard and the smoothening of the angularities of the national price systems helped to cover "the full complexity of the problems involved in the maintenance of international economic and financial equilibrium." Now "not only technical monetary problems, such as the use of gold in the currency systems, credit policies, reserve ratios and interest rates, but more general economic considerations, such as the effect of different exchange ratios upon export industries as well as upon domestic price levels and, therefore, upon wages and costs" have also come to be considered. It is agreed on all hands that, despite various rumours to the contrary, Mr. Roosevelt will not settle the questions of currency and exchange till he has ascertained clearly the needs of internal economy in this regard. And so long as the dollar continues to be of an unstable value, the readjustment of national and international price systems must be postponed.

* * *

Thus the period covered by the Survey closes with a check to the hope that adjustments on an international scale will be effected without much further delay. It is both incorrect and futile to suggest that the restoration of stability to international exchanges is the beginning of such adjustment. For the idea that monetary and exchange problems are, and can be decided, apart from the general economic problems is a thing of the past; and to demand that they shall be settled first is to reverse the precedence, which is already well settled in the minds of all the statemen.

We venture to suggest that the course of world economy in the near future would be determined primarily by the attempts in each country at national reconstruction. The Governments of Europe have already shifted the focus of international activity from economics to politics. While this development may be due to the resurgence of the general spirit of belligerence, the economic outlook is involved in this both as a cause and as an effect. The disappointment of the World Economic Conference has something to do with the revival of political preoccupations. And it may well be that as a result of the latter, economic policy may become more and more insular. The fact that the one nation, in whose power it is to set the forces of international understanding and co-operation in operation, is too deeply engrossed in her own national policy is itself calculated to force other nations to take defensive measures and set about putting their own houses in some sort of order.

* * *

We have, therefore to think what would be the resultant of the automatic and natural readjustments, that have already taken place and may be expected to continue, and the more artificial readjustments in each national equilibrium, which would be brought about by the conscious policy of the authorities. Whatever may be said against economic nationalism, we must admit that the exercise of governmental authority in economic matters, which it necessarily implies, must help the readjustment of national economic equilibrium. Mr. Roosevelt, for instance, would by his policy increase prices and make production at least barely remunerative. By the increase of wages and the expansion of employment, he broadens the basis of consumptive demand. The weight of indebtedness is reduced and made tolerable. As Mr. Roosevelt himself pointed out in more than one despatch to the World Economic Conference, if each national government would do similar reconstruction in each country, the revival would have been helped.

Though the effect of each national policy might be to accentuate the misfits in an international economic scheme, such effect can only be immediate. A rough redistribution of productive activity will have been effected before two or three years pass. It may be that the prejudices of economic nationalism will have played a large part in determining such redistribution. But the immensely important work of driving out of production those units, which cannot find a remunerative market, either because of perverse protectionism in the importing countries or because of inefficiency in competition, will have been achieved when the world has ceased to long for a system of free trade, which can never again be.

In such conditions, those elements, which will continue to be international, are the service of the international indebtedness and the flow of international capital, not perhaps on the old terms and conditions, but according to the standards which will prevail in the future. In this regard, the chapters in the *Survey* on the international indebtedness will be found to be very illuminating. Figures are given to show that the total volume of indebtedness has not diminished. During 1932 and the first half of 1931, though the principal governments of the world availed of every opportunity to reduce the burden of interest charges private industry and enterprise had no chance to do the same. The volume of the public debt, too, had been on the increase, owing to the enlargement of the commercial activity of the state and the addition of new responsibilities to the government. But international indebtedness has been lightened somewhat; and the process is still but barely begun. Though the World Economic Conference has disclaimed responsibility in this matter by suggesting that the debts are an affair of the debtor and creditor, the severity of the depression has brought about a spirit of accommodation which has done and will yet do wonders. Some of the debtor countries have by a process of increasing their active balance of trade minimised their difficulties and brought their foreign obligations under less unmanageable proportions.

Though the ordinary indices of economic progress are discouraging, there is reason to think that the new economic order is being approached, however painfully.

BALANCED BUDGET IN HYDERABAD

Financially, Indian India is apparently doing better than British India. In a previous article, we have recounted the doings of Sir Mirza Ismail in Mysore. And now we have to record the achievements of Sir Akbar Hydari in Hyderabad. He has more than balanced the budget for the next financial year, as he has estimated the total revenue for the next year at Rs. 797.58 lakhs and the expenditure at 780.94 lakhs, leaving a surplus of 16.64 lakhs.

Sir Akbar points out that sum of Rs. 75.42 lakhs from past surpluses and Rs. 4.66 lakhs by transfer from Famine and Industrial Reserves had been set aside. The total expenditure budgetted for 1343 Fasli thus comes to to Rs. 861.02 lakhs. "Provision has also been made for a Capital Expenditure of Rs. 60.81 lakhs largely on Irrigation Works and Railway Construction and it was anticipated that the year 1343 Fasli, would close with Balance of Rs. 112.83 lakhs."

As for Debt Redemption, the redemption of the loan due on 1st February, 1341 Fasli (1932) amounting to Rs. 75.45 lakhs left only two loans outstanding the one of 102 lakhs maturing in 1352 Fasli and the other of Rs. 76.31 lakhs maturing in 1352-61 Fasli. The precent value of these loans at 4 per cent. was Rs. 104.48 lakhs O.S. in all while the assets of the Debt Redemption Reserve were Rs. 137.75 lakhs O.S.

It must be pointed out that there has been no undue stinting of expenditure. Hyderabad is ahead of the Government of India, inasmuch as it had already effected a great deal of co-ordination between road and rail transport, bringing them together under a single Board of Management which has already spent 4.87 lakhs on starting motor services in the districts and the city. It is proposed to spend an additional 7 lakhs on the expension and improvement of existing facilities. The chief merit of Sir Akbar's financial administration is that he has balanced the budget without buying any extra taxation. This has been made possible by the Departmentalisation of finances, by which each department is entitled to keep its own surpluses, and which has enabled the maintenance of the closing Cash Balances, which in 1341 Fasli was Rs. 321.89 lakhs, as against an anticipated balance in the Budget of Rs. 90.50 lakhs, and of Rs. 221.14 lakhs in the year which is just ending, against an estimate of Rs. 160.72 lakhs.

WOMEN IN PUBLIC LIFE

The condition of women is a sure index to the condition of society. It is a matter of common knowledge that the decline of India, both political and economic, has synchronised with the decadence of woman's influence in society. The foreign domination of India, by the Mussalman invaders, gave birth to evil institutions, like purdah and early marriage of girls. These two evils, between them, caused the colossal ignorance of woman. She was taken out of schooling, and thrown into the comparative security of wedlock in the child-state. The burdens of family cares, while in an under-mature condition, sapped her too meagre strength. She can, under these circumstances, evince no great interest in the cultivation of her mind. On top of this handicap, she was also obliged to deny herself opportunities of free association in her society. No wonder she fell from the glorious pedestal of "friend, philosopher and guide" of man, to the inconspicuous role of a plaything. Apart from this function, she had no other place in the life of man. Her interest, if any, in the general scheme of life, came to be looked upon, in course of time, as an unwanted and inconvenient interference, by man.

* * *

It is no idle platitude to say that woman played a very important role in the affairs of man. Relics of custom, scraps of references in literature, and even historical evidences, all, go to prove the living interest that woman took in public affairs, and her direct contribution to the success of man in the field of action. Who, among the Hindus, does not know that woman handed over the weapons to her man, either on an errand of chase or war? Has she not exchanged *pan supari* with her man on the eve of a life-and-death adventure? Surely, here there is no trace of the quailing of woman, like the proverbial aspen. This is no make-believe. How often she barred the door in the face of the fleeing refugee from the field of battle? How refreshing her ideal, which reserved her gleeful welcome only to the returning conqueror, and never to a fleeing coward! Again, if news came that her man fell in battle, she, without much ado, immolated herself, rather than be the prize of the enemy conqueror. However futile the self-immolation of woman may be, none can escape admiring the courageous, supreme sacrifice. Perhaps, in ideal society, where free scope for social service was possible, she would not have immolated herself.

* * *

In place of such heroic courage of woman of an earlier day, we have her specimen of to-day, who pleads against risks and for cheap, easy life. Not only has woman fallen from her high pedestal, but she has dragged down man with her. But, there is evidence on all sides that the rot has stopped. There is ample proof of the reawakening of woman in every part of India. This reawakening is all the more creditable, in view of the fact that her ignorance is, on the whole, still appalling. In this respect, she is not far behind man. The Hindu renaissance, which has marked the last portion of the previous century and continues in the present, has been responsible for breaking the age-long custom of allowing girls to grow in ignorance. The reopening of the portals of knowledge to woman was an event in itself. The progress was painfully slow, not because of the diffidence or disinclination of woman, but sheerly because of the lack of funds. The social welfare of a people is always the concern of society. But, the purse of the nation is not in the hands of Indian society. The tentacles of a foreign government have grasped it. The foreign character of the Government compels a distorted perspective of national needs, and the consequent mal-distribution of national funds. Heavy military expenditure and enormous appropriations for "law and order" leave a sorry pittance for nation-building purposes. However slow the educational progress of woman may be, it has come to stay. The few fortunate women, who tasted the first fruits of education, feel like having drunk the wine of knowledge. The mighty swing from the utter darkness of ignorance to the lurid light of knowledge, though somewhat overpowering, has invested the educated woman with a missionary zeal for the uplift of all womanfolk.

* * *

Woman, in the public affairs of India, has left her mark. As though to compensate for shortage in numbers and lack of intensity in public work, she has worked herself in vociferation and clamant demands for her privileges, and none too soon by any means. Where any reform can be undertaken without requiring large funds, she has scored her successes. For instance, the Sarda Act, which purports to put a stop to early marriage, was possible, because it cost the Government no expenditure. In fact, compulsory education of girls should have preceded the prevention of early marriage. It is simple reasoning that grown-up girls should have something to engage their time, if they are to be kept out of family work. The best occupation for them is to study in an institution. They cannot take up work, as they are still tender in age ; and as for work, there cannot be work for all in this under developed country. It is to be hoped, therefore, that, in future, women would insist on reforms in their right sequence.

* * *

At the recent All-India Aryan Women's Conference, at Ajmer, Srimati Shanno Devi, the President, rightly observed that woman was the principal figure in raising or degrading society, and that woman was the custodian of the hopes of the future. Her advice to amalgamate all Women's institutions in an All-India Association is worthy of serious consideration in this land. The sooner such an All-India organisation is organized, the better will fare the cause of women's uplift. Such an organisation will be a power, which no government can treat with indifference. Mrs. Cousins, just released from the Vellore goal, has already schemed out the plan for an All-India Conference and its preliminary constituent conferences. Meetings of conferences are taking place in many parts of India, in preparation for the All-India Conference, which will be held in Calcutta at the end of the year. The All-India Conference is the proper body to institute an All-India Association on a permanent basis.

* * *

The advent of women in the public life of this country has already done incalculable good, if judged by the qualitative standard, rather than the quantitative. It has compelled order and decorum in large gatherings. It has added zeat for public work. It has been a source of encouragement for public workers among men.

* * *

As Dr. (Mrs.) Muthulakshmi Reddi said, in proposing Miss. D. MacDougall to the presidential chair of the Madras Constituent Conference, service, irrrespective of caste and colour, was the only test to be applied by them for posts of responsibility and honour. Miss MacDougall herself elaborated this idea in her address, from which the relevant portion is given below :

> It is the great happiness and also the great glory of the women's movement in India, that it has always been free from narrow communalism, pride and prejudice which are so great an obstacle in the way of India reaching her goal of responsible nationhood. Women have entered the field of Indian politics with this message, 'We are all one; let there be no division between us.' Let us trust that Indian manhood, always responsive to the voice of the mother, will accept this message, and that the presence and growing influence

of women in the public life of the country will always make for peace, dignity and mutual goodwill. Yet there is no Slumberous unanimity among us, no blind following of any one leader or authority.

The virility of these remarks is infectious. If a ray of it is caught by the public man, the communal squabbles will soon be a thing of the past. Judged by this precious lead, women have established their claim, to look after their interests. If they are to proceed with such clear perception, the leadership of the country by women will be all for the good. But, final verdict can only be extored, if, and when, they have organised themselves in their millions and have developed the requisite technique to win what they set out to achieve. The crucial test is their ability to introduce legislation for the compulsory education of at least girls, if not both boys and girls. It is only since 1925, they meet in conferences in an organised manner. The progress, so far achieved, is highly commendable.

One of the resolutions, moved at the Madras Constituent Conference, refers to women franchise, in these terms :

(a) This Conference supports the Memorandum II of the All-India Women's Conference.
(b) This Conference unanimously demands non-communal electorate and the maximum voting strength for the women.
(c) This Conference stongly recommends that a training for efficient citizenship should be instituted as a course of studies in all educational institutions.

Mrs.Dadhaboi, in moving the resolutions, explained at at length the demands made in the Memorandum II of the All-India Women's Conference.

"The memorandum strongly objected to the election of women to the Federal Assembly from the Provincial Legislatures by the indirect system of election and also to the principle of reservation of seats for women in the Provincial and Federal Legislatures. The memorandum further submitted that a system of franchise and representation based upon communal electorates and interests as poposed in the White Paper would be highly detrimental to the progress of the Indian people as a whole and to that of women in particular. They stand united in their demand for a system of Joint Electorates and record their protest against the Communal Award as it would introduce the poison of communalism into the now united ranks of the women of India."

The clear terms, in which the introduction of the poison of communalism into the united ranks of the women of India has been condemned by the very party affected, leave no room for the Government or even the British Parliament to pose as the Knight-errant of the women of India. Communal-minded men must look small, indeed, in the eyes of their own womenfolk. What warrant has man to parade his special choice for public work, when he is not able even to copy the illustrious example, set by woman. Perhaps, the communalist man may now take into his head to tutor his woman to vote for communal electorates, in the coming Women's conferences. But, in this attempt, he will be knocking against a wall, as women are rich in human qualities, such as, kindness, mercy, fairplay and charity. They have the fortitude to face a defeat, and the courage to essay for a fresh triumph. Endowed as they are with such qualities, women have no need to take shelter under communalism.

* * *

The "Aryan" women, meeting at Ajmer, have passed a resolution that, "in the event of a husband tyrannising over his wife, the latter should try to reclaim him, failing which the society should excommunicate him, half of his property being given to the wife by way of alimony." Whatever the merits of such a resolution, it cannot fail to impress on men's minds the new-born strength of Indian women. It will not. be long, therefore, before men realise the value of association with women in public life. However soon or late they secure the political and economic freedom of India, women will make for solid nationhood, free from communal, sectarian and provincial dissensions. Their contribution to this end will entitle them to the eternal gratitude of this country.

COTTON TALKS

The departure of the representatives of the Lancashire cotton industry brings out in relief the inconclusive course of the cotton talks in Simla and Delhi. Sir William Clare Lees and his colleagues have successfully shrouded their disappointment in more than the usual reticence of delegates to such conferences. Mention was made of the evidence of *goodwill which they found in India allround*; and the hope was also expressed that before long Lancashire

would be able to come to a settlement with India on the question of the former's imports of cotton piece-goods into this country. But there can be no doubt that from the beginning the Lancashire delegation had been ill at ease in the tri-partite talks. As our Simla correspondent pointed out some time ago, the representatives of the British cotton mill industry suffered from the lack of a clear-cut official status. While the Government of India were naturally fully prepared to support the interests of Lancashire, so far as the discussions and negotiations are concerned the latter status was a real handicap. The Lancashire delegation was, therefore, thrown upon the private discussions with the representatives of the Indian cotton mill industry.

* * *

It would now appear that, in this regard, Sir William Clare Lees and his colleagues had banked too heavily on the assurance of the representatives of the Bombay Millowners' Association that the Indian cotton mill interests would be prepared to forego the benefits of the revenue surcharge on the imports from Lancashire. In making this offer to Lancashire, Mr. Mody's aim was probably to secure the support of the British Government in regaining for the Indian mills the outlet which they formerly had in the colonial markets. He had also probably persuaded himself that the Indian mills outside Bombay could be more easily prevailed upon to defer to the interests of Lancashire in this respect. The Simla talks have shown that, on the one hand, Mr. Mody had grievously under-rated the significance of the revenue surcharge to the cotton mill interests outside Bombay and that, on the other, Sir William Clare Lees and his colleagues had set too much store by Mr. Mody's assurance. It is not yet clear whether the disappointment in this regard had much to do with the Lancashire delegation keeping strictly to its original programme of sailing back on October 28. In fact, a perusal of the London papers suggest that even in Great Britain there was no clear conception of the objectives of the Lancashire delegation or the way in which it would endeavour to achieve them. Obviously, Britain was less concerned about securing her share of the Indian market, which, in a sense, is hers to do what she liked with, than to mitigate the more outstanding rivalries of Britain and Japan in the world markets. It was even suggested some time ago that the British Government had been tackling Japan somewhat more closely and that the tripartite talks in India were really a got-up show behind which the real deed was being put through. One could readily give credence to reports of this kind, but that the competition between Britain and Japan is more fundamental, more keen and therefore less easy of speedy solution than is usually thought.

* * *

A writer in the *Financial News*, for instance, shows a keen appreciation of the intensity of the conflict between Japanese and British exporters, the dangers of unregulated warfare, particularly in a period of depression and rapidly shrinking purchasing power in the world markets, and appeals to either country for a recognition of the needs and viewpoints of the other. On the one hand Britain must grant the claims of a young and virile race to a place in the sun. On the other, Japan must recognise the dangers of too impetuous assault on the commercial strongholds of the older nations. While the wisdom of these admonitions is unquestionable, their futility is equally obvious.

* * *

The conflict between Britain and Japan is of importance to India only in so far as she would suffer, more than any other country, its repercussions. In spite of the power and influence which Lancashire can exercise over our destiny, our present pre-occupation is only with our commercial regulations with Japan. Though these relations extend over a whole range of commodities and trades, Japan has succeeded in lending point to the whole question through her boycott of Indian cotton. The position of our national economy leaves us particularly vulnerable in this point of our export of raw cotton. Perhaps, the present situation brings forth to Lancashire and Great Britain the tremendous folly of not having developed closer links with this country. If, during the last two, three decades, Great Britain had explored the possibility of Lancashire having a considerable offtake of Indian cotton, India would be less dependent on Japan's goodwill and reciprocity, and the tripartite talks at Simla would have involved less conundrums alike for Great Britain and India. But the opportunities of earlier decades have been wasted away; and just at a time, when the cotton grower has been hard hit by the retaliatory action of Japan, it is little comfort, and even less help, if the delegates from Lancashire were to hold out the assurance that they are exploring the possibilities of an increased offtake of Indian raw cotton.

* * *

In respect of the demand for Indian cotton, Japan is in a better position to meet out requirements and, therefore, enjoyed the vantage in the Simla talks. And she has used this vantage to great effect. The dominance, which cotton mill interests have enjoyed for a long time over the question of our trade relations and our tariffs, has been weakened more by the Japanese boycott of Indian raw cotton than by any possible agitation that could have been set up within the country by, or in behalf of, the agriculturists. To this extent, it has been all to the good. If the final settlement between India and Japan should, as it seems very likely, include an undertaking on the part of the Japan to buy a minimum amount of raw cotton, the cotton grower will have been assured of at least one considerable market in these highly uncertain days. But the present policy of conducting the negotiations with Japan, with eyes fixed solely either on the Japanese quota of the import trade in cotton goods or the export trade in the raw material, must be deemed to be of doubtful wisdom. The way in which Japan has been conducting its big offensive in the export markets of the world, it is certain that more trades and industries will be affected than are now presumably gaining the attention of the authorities in Simla. Owing to the scrappy nature of the reports, that are available of the negotiations carried on at Simla and Delhi, it is difficult to discuss in detail their implications and consequences. But it is necessary to urge that the commercial relations between India and Japan and the economic needs of India as a whole, now and in the future, should be regarded from a broader standpoint. There is every reason to think that the scope of the discussions have been narrowed down too closely and that, as a result, the Japanese delegation have been able to drive too hard bargains in every respect. They objected in the first instance to the linking of the quota of the import trade with the offtake of Indian raw cotton. The reluctance in this regard could not have been other than a mere pose for bargaining purposes. It was, so to say, a preparation for the later wrangles for an increased quota and a lower offtake of cotton. And if press reports are true, while the Government of India have been showing a readiness to reduce their demands in respect of either, the Japanese delegation have been keeping themselves free of commitments and bringing yet more pressure on the Government. We believe that an attempt should be made to offer Japan scope for expansion of imports in lines in which India is not already developed and to improve our gains in respect of the quota of cotton goods and the purchase of raw cotton by Japan.

what is now universally regarded as an unwise step in the present predicament of world economy. In a broadcast speech on the Empire in world politics, Mr. J. H. Thomas pointed out that during the last three months British imports had increased by £8 million and exports by £9 million and that a similar improvement had occurred in Canada, Austrrlia, New Zealand and South Africa. Mr. Ainscough declares that the year 1932-33 is noteworthy as registering the first definite check on the 12-year downward trend of the United Kingdom's share in India's exports. And he continues: "The steady strengthening of Britain's position in her most valuable market can only be accomplished by a systematic and well-planned effort of British manufacturers and merchants with a determination to follow up energetically and with imaginative foresight the fiscal advantages of the Ottawa Pact. Mr. Ainscough, however, admits at the same time that this welcome change in the United Kingdom's exports to India was noticeable even before the Ottawa Pact was signed. No opponent of the Ottawa Pact need be at pains to deny that the expansion of British exports to India and the increase in the British export trade have not followed as a direct result of the large-scale Imperial preference planned a year ago. To reiterate these gains is to miss the point of the whole attack. Those who denounced the Ottawa Pact at the time it was concluded based their arguments not on the inability of the Pact to increase the amount of the inter-Imperial exchanges but on the ground of their repercussions on international trade relations as a whole.

MR. V. J. PATEL.

By the death of Mr. V. J. Patel, India has lost an adroit politician, so valuable to the nation in the present position of its politics, and an interesting personality. The popular idea of President Patel is that of a fervent nationalist and a selfless worker, who wrecked nothing in his fearless fight against the encroachments of the Government on the rights and privileges of the Assembly. While, undoubtedly, Mr. Patel was more human than the picture of him, which has crept into the popular mind, he had qualities which wore well in the hectic days of the Swarajist Assembly. Installed in the Presidential chair by colleagues anxious to keep him out of their way, Mr. Patel directed his pugnacious instincts against the Government. The stage was well set for him—an Assemmbly full of the best brains in the nationalist ranks, the Government benches ill-manned in every tier, a Viceroy anxious to see fair play at least in matters in which he had the final say, a country ready to applaud every show of assertiveness, and Mr. Patel cut out in nature's best form for the role he was to play. It is no small good fortune to the country that the first Indian President was a zealous and keen upholder of the rights of his office and the Assembly. Mr. Patel lacked the qualities which has enabled his brother to take his place as the Mahatma's second in command. And just when it seemed that conditions were again congenial to his active participation in politics, Mr. Patel has been snatched away. Mr. Patel is the type of nationalist, of which India will need more in the days before her.

THE B. I. F.

The effect of the Lausanne Agreement regarding reparations and the virtual suspension of war debts on the Bank for International Settlements has, for some strange reason, escaped public attention. It will be remembered that though it was claimed that the Bank for International Settlements was destined to become a live central bank of central banks, it was in origin and purpose, merely an agency of the Powers for putting through the transactions connected with reparations and war debts. It is still doubtful if any of the authors of the scheme intended the Bank to become at any time the apex of the world's central banking systems. So far as France was concerned, it is certain that her astute politicians saw clearly the opportunity for using it for consolidating the financial hegemony of France. The Bank was manned predominantly by Frechmen, who are not marked for their international sympathies. And at one time Great Britain grew gravely suspicious of the hold which France had gained and was retaining over the International Bank. As for the other powers, it was readily believed that, when there was a large amount of business of an international character to be put through, the Bank of International Settlements was the obviously handy instrument.

It is unfortunate that the International Bank should have been instituted just on the eve of the utter breakdown of the international monetary standard and even the weakening of the recognition that the international standard is at all necessary. It was clear within a few months of its establishment that the Bank could not function in any effective manner to reduce the disturbance of international finance. It became a mere agency for reparations and war debts; and it is natural that with the reduction of reparations and the suspension, and subsequently repudiation, of war debts, the occupation of the Bank for International Settlements is gone. It is well known that the figures published by the Bank have of late been showing a consistent shrinkage which is only natural. The latest blow to its prestige comes from Dr. Schacht who had little compunction in making the formal request for permission to alter the statutes of the Reichsbank. Dr. Schacht knew, and the world knew also, that the Bank for International Settlements has not the vitality left in it to say 'No' to such request. Though Dr. Schacht is known as a consistent opponent of inflation, it cannot be denied that the purpose of his alteration of the statutes is to induce a greater degree of elasticity in the reserve provisions of the Reichsbank. The Bank for International Settlements comprises a number of prominent central bankers who are, as the saying goes, born deflationists. That such born deflationists could not, even in a collective capacity, summon courage to say 'No' to Dr. Schacht is conclusive evidence that the Bank for International Settlements is weakening in every part. The latest news that the Bank is not renewing the contracts with its covenanted officials and that it is contemplating a reduction of its staff makes the conclusions of this paragraph far more than a mere surmise.

SINGLE PREMIUM PERPETUAL FIRE INSURANCE

The essential difference between a fire insurance policy and a life insurance policy is that the former is a contract of indemnity, while the latter is not. In the former the premium is paid to cover a risk for a short period usually not exceeding one year; and if the risk insured against happened within this period, the company will make good the actual loss incurred by the policy holder up to a specified maximum amount. If the risk does not happen within this period, the premium is forfeited and the contract becomes null and void. Thus the sum assured is not specific, and nothing will be payable unless the contingency insured against happens. Whereas in the life assurance, the sum assured is specifically stated in the policy and it is also definitely payable sooner or later, so long as the terms and conditions of the policy are not violated. It is not a contract of indemnity in as much as the question of loss incurred by the policyholder does not at all arise in any case.

Usually fire insurance contracts are given for short periods not exceeding one year and, if the policyholder wishes to continue the insurance, he has to renew the contract year after year by paying the requisite premiums. The insurance companies can refuse to cover the risk in the beginning or even the currency of the policy by refunding the proportionate unearned premium. By perpetual fire insurance is meant that class of fire policies where the premium is paid as a single deposit one and the building covered for the rest of its existence. The selection of buildings for this type of fire insurance is rather strict. Certain specific standards of construction and housekeeping are required and a careful inspection of the risk is made before a perpetual cover is given. Usually brick and stone buildings with noncombustible roofs and under public or very good private protection, are alone accepted under this scheme. The contents of the building cannot be insured perpetually. They should be insured separately under the ordinary fire insurance scheme. Besides all special hazards are excluded. Thus public buildings and institutions, schools, churches, well looked after private dwelling houses etc., can be insured under this plan.

The premium rates are usually 12 times the ordinary annual fire insurance rates, with a minimum rate of 2 per cent. of the maximum sum assured against. Though the initial premium is very heavy, the advantages of this policy are numerous and, provided, they are explained to the public, there can be no doubt that this type of policy will become better known than it is to-day. Now only a few States of U. S. A. and a few western countries are doing this class of business. Even the initial heavy premium can easily be procured from some financing corporation and the whole loan amortized within 15 to 20 years by the application of the normal yearly fire insurance premiums. Thus by payment of 15 or 20 annual fire insurance premiums, the building is perpetually insured against fire losses. The only case where the policyholder can stand to lose when compared to the ordinary fire insurance policyholder is when a total loss occurs within the first few years of payment of the initial deposit premium. In this case, the policyholder loses a good sum of unearned premiums, but the few companies that do this kind of business have made arrangements to re-imburse the assured in such cases by also issuing a further policy to insure the perpetual deposit. In the event of loss, total or partial, this additional policy provides the funds to reinstate the insurance.

This policy may be surrendered at any time after the commencement of the risk and the initial deposit premium less 10 per cent. will be refunded. Some companies return the entire premium after the lapse of 10 years for surrender of the policy. If the policy was in force for more than 5 years, a dividend of 10 per cent. of the deposit premium per annum is also paid to the policyholder besides the full perpetual cover afforded. This policy may at any time be used as a liquid asset for the entire premium less 10 per cent. There can be no denying the fact that this plan will prove to be an ideal one for qualifying buildings. Further the premium paid will prove to be an ideal one for qualifying buildings. Further the premium paid will later (after the lapse of 5 to 10 years) prove to be a good investment also. It is the experience of the few American companies that issue perpetual fire insurance policies from a very long time past, that the loss record of this class of policies is low and that it can be successfully underwritten as a source of profit to the companies. Thus both from the policyholders' point of view and from the company's point of view, it is a remarkable and admirable plan. And yet it is strange that it has not so far got the publicity, which it deserves. Perhaps the difficulties involved in the selection of risks, the loss of commission to the agents (only 10 per cent. on the single premium is usually given to them) and their consequent indifference in explaining in detail the merits of this scheme to the public, and the initial heavy burden to the assured, have stood in the way of its popularity.

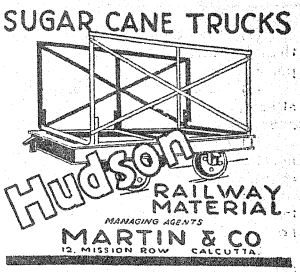
Clive Street Gossip



I must reiterate my grouse at the inadequate and misleading service which news agencies render, on not a few occasions, when financial developments and events of world significance have to be covered.

There cannot be any doubt that the broadcast speech which President Roosevelt delivered on October 22 constitutes an important landmark in the course of the world depression. I shall be, at a later stage, proving that, in the recovery programme of the American President, the plan announced early this week marks an important stage and might well prove to be the turning point in the matter of world prices of commodities. In this context, what I wish to emphasise is that in reporting or interpreting a speech of this significance, responsible news agencies must show more than ordinary care, as the news is calculated to exercise a profound influence on market sentiment, and movement of prices in markets. As I write these lines, I have before me the cables of October 22 to October 24. I have read and re-read them with most punctilious care ; and it is not altogether easy for me—a man fairly equipped with the technique of finance—to piece together a complete and coherent version of President Roosevelt's utterance. At the moment, I am even prepared to assume that this lack of coherence might be due to a lack of precision on the part of the President himself in his address. But it is the comments cabled by *Reuter* that are positively misleading. In a *Reuter's* telegram dated Washington, October 23, the following information is given as regards Britain's war debts to America.

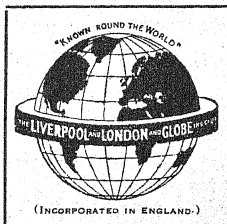
> "Britain's War debts to the United States may automatically be reduced as a result of the monetary policy outlined by President Roosevelt last night, economists pointing out that if the value of gold be reduced even temporarily by fifty per cent., the British need a correspondingly smaller sterling amount to meet the United States obligations."

It is difficult to divine the meaning of this passage. In the first place, the developments in America are not calculated to reduce the value of gold. On the contrary, the plan of October 22 will further accentuate the rise in the value of gold. In the second place, if the value of gold be reduced, the British, instead of needing a correspondingly smaller sterling amount to meet the United States obligation, would need a correspondingly larger sterling amount. It is not for the first time that I have noticed people using "price of gold" and "gold prices" as if they are one and the same thing. The price of gold is the price that has to be paid for a given quantity of gold as a commodity. Gold prices mean the prices of commodities in terms of gold. Thus, if the price of gold goes up, it means the gold prices of commodities have come down and *vice versa*. It is, therefore, clear that the price of gold and gold prices move in opposite directions.

In the cable I have extracted above, there has been some confusion of this kind. The words "value of gold" would appear to stand for the value of dollars in terms of gold. What America is trying to do is to reduce the value of the dollar in relation to gold or, to put it in another way, to raise the price of gold in terms of dollar. To purchase the same unit of gold, a larger amount of dollars would be needed. That is the objective which the President has set before himself and a simple way of expressing this fact is that the dollar has depreciated and will continue to depreciate. Since, for the second time in this year, America reabandoned goldstandard with the deliberate intention of depreciating the dollar, there has already been a considerable setback in the value of the dollar in terms of gold. But the President is not satisfied with the depreciation that has taken place in relation to his plan for the revival of prices in America to the 1926 level. The announcement of October 22 means that, while till now, the other items of the Recovery Plan were engaging the attention of the authorities, special and pointed attention will, henceforth, be given to the value of the dollar. The depreciation of the dollar that has taken place up-to-date was not the main plank of the programme in the stages so far covered. The main plank of the programme hereafter is to be a deliberate and manipulated depreciation of the currency ; and such manipulation will continue till the restoration of price levels envisaged by the American authorities is attained.

Again, in a cable dated New York October 23, *Reuter* refers to the "Opinion of orthodox economists and bankers." And the information is vouchsafed that "some quarters are predicting that the immediate effect will be an increased gold price abroad and a drop in dollars *vis a vis* other currencies." It should be clear that if the dollar depreciates *vis a vis* other currencies, dollar prices of commodities will rise : and prices of commodities in gold standard countries will decline. *Reuter* makes its New York authorities say the exact opposite thing. It is suggested that with a drop in dollars *vis a vis* other currencies, gold prices abroad will increase. This, again, is another instance of the confusion I have referred to. What is meant is the "price of gold" and not "gold prices".

Let me now turn to the discussion of the broadcast speech. As considerable confusion has been caused in this matter in the public mind, and as business circles are extremely curious to know the exact meaning, significance and likely repercussions of the policy now announced, it would be useful if I undertake to elucidate, in as simple terms as possible, the substance of Mr. Roosevelt's address. What he says is, in effect, somewhat as follows :



(INCORPORATED IN ENGLAND.)

Established in India 1853
Funds Exceed £25,000,000

FIRE LIFE
LOSS OF PROFITS
MOTOR CAR
BURGLARY
WORKMEN'S COMPENSATION

CALCUTTA—26, DALHOUSIE SQUARE.
BOMBAY FORBES BUILDING, HOME STREET

(1) It is the stability of internal prices rather than stability of exchange which is of prime importance from the point of view of the President.

(2) Before stability of internal prices could be attained, a considerable rise in prices of commodities should take place so that 1926 levels may be attained.

(3) Already there has been an upward movement of prices. But the improvement has not been equal and simultaneous in all commodities.

(4) It is the American policy to increase and extend the rise in products which hitherto have felt no benefit.

(5) This alround raising of prices would be effected at any cost. "If it cannot be done in one way, we will do it in another,"—says the resolute and determined President.

(6) After the restoration of the prices, the dollar would be revalued.

(7) Both in regard to the journey to the desired price level and the terminus of stabilisation at the new value, the aim to be kept in view is that the purchasing and debt-paying power of the succeeding generation will not be liable to wild fluctuations.

(8) The monetary factor is not the only issue in a programme of raising prices but it is a major issue.

(9) Committed to Economic Planning, Mr. Roosevelt is now to devote his attention to money Planning as an important (though not the only) factor in this process of rejuvenation.

(10) Planned Money in the existing situation in America means further depreciation of the dollar.

(11) To enect this, the Government are ready to pay increasing prices for gold. The intention is that by raising the price of gold, the easiest way is secured for lowering the value of dollar in terms of gold.

(12) Such purchases of gold will be made "almost immediately, and the probable prices onered will be above the London and Paris market prices."

(13) The Government will be buying newly-mined American gold at whatever price may have to be offered. They will also buy gold in the world markets with a view to counteract the moves which other countries might take to prevent an undue depreciation of the dollar.

(14) Buying of gold in foreign centres means also selling of gold on occasions, the aim in this regard being an orderly, and not chaotic, process of depreciation.

As I view the American programme, it seems to me that it is made up of the following stages :

(*a*) April to October was devoted to economic planning where the conditions pertaining to industry, agriculture, indebtedness of the population, stability of banks, technical position of stocks of commodities, etc., were engrossing all attention.

(*b*) November to December will be devoted to Money Planning. In this stage, by offering higher and higher price for gold both at home and abroad and by expansion of currency on a determined scale, the dollar will be induced to depreciate to such a level as to bring about the 1926 price levels of commodities.

(*c*) January-February will be devoted to the discussion of war debt questions with Allied powers and the final settlement.

(*d*) March-April may then prove a timely period for revaluation of the dollar, meaning, possibly, the stabilisation of the dollar in terms of gold at the level brought about in the second stage for the purpose of restoration of 1926 price levels.

The first stage has been comprehensively tackled ; the second stage has just been entered on ; and the two last stages are, I must warn, what I, from my understanding of the situation, am inclined to foresee as likely developments. There is nothing in the pronouncements so far made to indicate that the two stages I have suggested may be taken as certainties. But I do believe that the trend of events is such that I, for my part, would be surprised if the programme does not turn out to be on the lines I have marked. I have argued in some such way as this : The first task of the Administration in the U.S.A. was to remove the Diffidence Complex and instal Confidence Complex. To effect this, it was necessary to take on hand all those sections of national economy in which serious disruption had taken place. The process of mending has taken all this time ; and the mending could have been quicker and surer if, simultaneously, a big and determined drive had been undertaken for such depreciation of the dollar as would be warranted by the objective to raise prices to 1926 level. However, there was one important reason why depreciation, with its inevitable ally and concomitant inflation, had to be kept over to a later stage for a big offensive. The budget has been showing large deficits for the past three years. Arrangements for raising the loans to make up the budgetary lee-way had to be made. There were also a good few maturities of loans and bonds for which conversion operations had to be put through. If the plans for loans and conversions were placed before the public after a substantial dose of inflation had been effected, the American Government would have had to pay a pretty high rate of interest for their borrowings. It was, therefore, necessary to have the loan operations out of the way before depreciation of currency and inflation could be announced as essential features of the programme. The conversion operations have now been tackled ; and the Administration is now free to devote its full attention to the problem of planned money, which, in the case of America, means the lowering of the value of the dollar in terms of gold. It is for this reason that I assume that, without any fear of complications, President Roosevelt could now resolutely carry out the plan he announced on October 22. Its timing is in complete accord with developments in other fields. During two months, by the natural process of the influence of the psychology created in world financial centres as regards America's monetary policy and by the active steps which Mr. Roosevelt proposes to take by way of buying gold in the domestic and international markets at prices deemed necessary and suitable from time to time, the downward trend of the dollar should receive emphasis and acceleration—acceleration so rapid as to reach a level that would be in accord with the desired restoration of 1926 price levels. This depreciation of currency cannot, for obvious reasons, go on endlessly. At some stage, it should stop. My own view is that by the end of this year, the decline would be arrested and efforts will, thenceforward, be made to maintain a manner of stability of exchange at the level then attained.

The whole world knows, and America now knows it, that neither for America nor for the world, there can be a solution of the problems arising from this world depression until and unless the war debt arrangements are revised in a way that international payments would cease to disturb exchanges and to impose an unbearable strain on the economy of individual countries. This revision of war debts is inevitable. President Roosevelt realises it, as is evidenced by his gesture of accepting a token payment in respect of the June instalment. Just as a resolute plan of depreciation of currency had to come after the loan operations had been successfully exe-

cuted, so the war debt discussions and settlements have to come after the full extent of depreciation has been reached. If the debt settlements were to take place at a stage when the dollar should be higher in value in terms of gold than the ultimate level that is now kept in view, such debt settlements as is made in the period prior to full depreciation would have helped the debtor and not the creditor. It is, therefore, our opinion that war debt negotiations would be taken on hand seriously immediately after the Administration is persuaded that there is no further need or possibility of depreciation in the value of the dollar. With the domestic economic, agricultural, industrial, investment and banking problems mended and trimmed in the first stage ; with Money Planning carried out in the second stage ; with war debt settlements arrived at in the third stage, the setting may be said to be complete for the final stage of the stabilisation of the dollar at a new parity. As we interpret the American situation and developments, we can see a purposiveness and continuity, an essential integrity as of an organism in the entire plan.

However, it is not everybody that thinks so. The announcement of October 22, which, as we have said, marks the third stage of the recovery programme of President Roosevelt, has received a bad press if we may judge from the opinions and impressions which *Reuter* has cabled. We are told that conservative hearers were "aghast" at Mr. Roosevelt's broadcast speech. In another message, the opinion of orthodox economists and bankers is summed up in the words: "Utopian and unworkable." We are also asked to believe that leading financiers consider that the President's plan is most unprecedented and completely at variance with established monetary precepts. The London Correspondent of a Calcutta daily is responsible for the statement that "some Americans are already saying that his (Mr. Roosevelt's) new plan is a confession that the national recovery programmes have failed." In respect of these forebodings of Jeremiahs, I feel like saying that it is a case of the wish being father to the thought. I cannot but think that Britain is not exactly keen on the American experiment turning out to be a success. The Britisher does certainly like to believe that the British currency is the soundest in the world and that the British monetary practice is the only correct thing. If sterling depreciates in terms of gold, sterling is doing just what is good for England and for the world. If British practice to-day is nothing more than a policy of sit-still-and-do-nothing, that is the only commendable policy in a world afflicted by chaos and harassed by doubt. But if America depreciates her currency, she is doing something which is extremely selfish and which upsets international programmes. If America has the daring to undertake a new experiment, it is time she realises that discretion is the better part of valour. During all these six months when President Roosevelt has applied himself, with fervour and single-minded purpose, to the National Recovery Programme, he has been assailed, on all hands, by doubting critics who are eagerly looking forward to the time when they can say "Did we not say so?"

For a true appreciation and understanding of what President Roosevelt has essayed, I would commend a careful study of Sir Basil Blackett's book *Planned Money*. An inkling of the President's intentions and plans was given in his books. *Looking Forward*. These two books, in conjunction with Lord Melchett's *Modern Money*, must be read, re-read and digested by all those who seek to understand the new trends and tendencies in world economic though. Let us forget all that we have learnt in our early days. Let us learn the new economics that is growing up, from the three books I have mentioned and from the writings of Mr. J. M. Keynes. If such a study be made in humility and reverence, one would realise that what President Roosevelt is doing is nothing Utopian and unworkable; and that his recovery programme is the only constructive effort that any nation of the world has put forth amidst the trials and perplexities of the present depression. The following passage is taken from a cable appearing in a daily paper and it appears that the Washington Correspondent of the *Times* believes that he has finally and effectively proved President Roosevelt in the wrong.

The *Times* points out that, whereas the President in one passage promises a sound currency and announces that the dollar will be revalued after price levels have been restored, in others he says that he is continuing the move towards a "managed currency" and proclaims his determination "to seek and to maintain the dollar, which will not change its purchasing or debt-paying power during the succeeding generation."

"Of course," says The *Times*, "he may attach a meaning of his own to the terms he uses, but as generally accepted a 'sound currency' means a currency having a fixed value in terms of gold and to 'revalue' the dollar means to give it a new gold content. No way has yet been discovered by which a dollar with a fixed gold content will not fluctuate in purchasing power."

As Sir Basil Blackett has pointed out, the ideal monetary system would combine stability of the internal price level with stability of the foreign exchanges; but, in existing circumstances, the two are not completely compatible. It is because of the pre-occupation of the several countries with stability of the foreign exchanges, that internal conditions in each unit came to be disrupted during the last few years. The World Economic Conference and its debacle have proved conclusively that any concerted international action for stability of exchanges or any other objective of this kind is unlikely in the present temper and with the present outlook of the nations. An objective, the pursuit of which is likely to result in immediate results and the success of which has a larger measure of guarantee, is the attainment of a Constant Price Level on the basis of independent local currencies. If this objective were clearly understood and intelligently pursued, and if the internal purchasing power of a number of local currencies were in fact being kept stable, "it would follow almost automatically that their external exchange value in terms of each other would naturally be subject to minor long-term variations only, and would in practice remain approximately stable for purposes of all short-or-medium-term transactions. If each nation looks after its own currency in relation to domestic conditions, the inter-relationship of the various currencies will look after itself. In other words, if local currencies are placed on a strong and stable basis, the stability of international exchanges is a matter of course. This is the obvious reply to the criticism of the *Times* that a currency with a fixed gold content is bound to fluctuate in purchasing power. A currency fixed at a proper valuation on the basis of intrinsic economic conditions at home could be said to be fairly immune from undue fluctuations in purchasing power.

The comment of the *Times* is as follows:

> "The assumption under-lying Mr. Roosevelt's words is that the internal price level can be controlled as changes are deliberately brought about in the gold value of currency. There is complete unwillingness to believe this in banking circles where experience in Britain and the United States is cited in rebuttal."

Let me quote Sir Basil by way of answer.

> "There is great force in the view that the monetary system by itself is not the strongest instrument for controlling price movements. To deny the obvious truth that monetary policy is a major factor in determining the level of prices is to insult the intelligence of an exasperated public by what is bound to look like obscurantist fanaticism in support of the gold standard."

"EAVESDROPPER."

THE GATEWAY OF INDIA

Bombay, October 25.

Considering that it was Bombay that organised a virulent opposition to the Reserve Bank scheme of 1927, it is surprising that, on the present occasion, we hear but faint voices. An unkind critic suggested to me that Bombay was heavily involved in Imperial Bank shares in 1926-27; that the business community of this centre feared a heavy decline in the value of the Imperial Bank shares if the Reserve Bank Bill was passed; and that, therefore, it was not to Bombay's interest to allow the Reserve Bank to come into existence. Investors at this end have since then, considerably lightened their holdings in Imperial Bank shares; and one does not, therefore, notice anything like the dash and vehemence of the earlier agitation.

But for the propaganda that was conducted by the business leaders of this place, Sir Basil Blackett's Bill would certainly have reached the Statute Book. As it was, Bombay was harping all the time on the conversion of the Imperial Bank into the Reserve Bank. Sir Purshottamdas had a paragraph or two to this effect in his dissenting note appended to the Hilton-Young Currency Commission Report. It will also be remembered that Mr. B. F. Madan advanced a proposal to buy up the shareholders of the Imperial Bank with a view to its conversion into a State Bank for central banking purposes.

There are, thus, abundant grounds for believing that the opposition of Bombay to the Reserve Bank scheme on the earlier occasion was due to apprehensions that the status and earning power of the Imperial Bank would thereby be impaired.

It is, of course, difficult to substantiate an allegation of this kind. In fact, it is the easiest thing to attribute motives and to make insinuations.

Be this as it may, it is noteworthy that the stalwart fighters for a State Bank scheme in 1927-28 have now raised no protest against the shareholder plan that has been put forward. The Federation of Indian Chambers of Commerce, whose committee met in Calcutta a month ago, has given its approval to the shareholders' scheme. The President of the Federation, Mr. Nalini Ranjan Sarker, has issued a memorandum (presumably as representing the views of the Federation) in which he expresses his concurrence with the shareholder plan. Now comes forward Mr. A. D. Shroff, the stormy petrel of the Indian Merchants Chamber and a powerful member of the committee of the Federation, with his blessings to the shareholder plan.

In *A study of the Reserve Bank Bill* issued last week by Mr. A. D. Shroff, he has presented the salient features of the Bill with considerable lucidity and made out his criticism with great force. On most of the points which he has advanced, there would be perfect agreement between him and nationalist opinion.

However, it is to be regretted that he has so easily lent himself to the support of a shareholder's bank on what he would call grounds of expediency. He admits that "the insistence laid in certain quarters for making the Reserve Bank a State Bank with the entire capital held by the Government is inspired by the natural anxiety to see that the profits accruing out of the handling of crores of taxpayers' money and the issue and management of the nation's paper currency should revert to the public Treasury for the benefit of the country at large".

He proceeds to state the other side of the case; and his own leanings would appear to be towards the other side: "On the other hand, the experience of different countries in the past suggests the desirability of safeguarding the stability of the note issue and of making the central bank less amenable to direct Government influence and control by the creation of a proprietary interest through a shareholders' bank. The main objection against a shareholders' bank is the appropriation for the exclusive benefit of a small section of the community of the profits derived from the use of public funds". Mr. Shroff is not exactly correct when he says that the objection to a shareholders' bank is the diversion of a portion of the profit of the Bank to private shareholders. The real objection is that in a shareholders' scheme, it is possible for a financial clique or caucus or some other vested interest to manipulate the shares and monopolise control.

To say that shareholders appoint directors is a fiction which everyone in Bombay knows only too well. It would, therefore, amount to this—that, in theory, the body of shareholders would be an electorate for directors; in practice, it is the Government, the first appointed directors and the Governor of the Bank that would be able to intrigue and manoeuvre in such a way as to keep the Reserve Bank Board a preserve for the few and select so long as the few and select are acceptable to the controlling caucus.

Mr. Shroff has not met this point at all. And it is surprising that he has not done so as he has been taking an active interest in the affairs of the Bombay Shareholders' Association and knows only too well how shares can be manipulated by interested parties to the detriment of the general body of shareholders and to the benefit of those that have seized the power.

As regards the ratio, Mr. Shroff is his natural self again. He states several convincing reasons against the present link of the rupee with sterling. They are "simple and easily understandable"; and as this is a question on which a few other representatives of Bombay have played into the hands of the Government by taking the standpoint that it is not the legislature that should take any action in this matter, the reasons advanced by Mr. Shroff are worth quoting in full:

1. The fate of the rupee is made to hang on the fortunes of the pound sterling.
2. The value of the pound sterling is being shaped according to the requirements of the trade, industry and commerce of Great Britain.
3. The vital fact in the economy of Great Britain is the maintenance and expansion of her foreign trade which is more important than her domestic trade. England grows food sufficient to last her for only two days in the week.
4. The necessity for keeping up her foreign trade means the attainment of such comparative costs of production as would secure for English exporters a competitive position in foreign markets.
5. Comparatively reduced costs of production demand regular supplies of cheap raw materials and foodstuffs.
6. Seventy per cent. of India's population live on agriculture and the unprecedented drop in prices of primary products has caused widespread misery necessitating remission of land revenue, sales of gold for the purchase of the bare necessaries of life, etc.
7. India's greatest need is a substantial rise in the prices of raw materials and foodstuffs.

Mr. Shroff's remark that the Governor and Deputy-Governor should not be appointed from Government or State officials is somewhat piquant in relation to the report sent out by the London Correspondent of *Indian Finance* that Sir Howard Denning's name was being considered for the first Governorship. This is what Mr. Shroff says:

> "Governor and Deputy-Governors should not be appointed from Government or State officials. It is difficult to understand why the disqualification applicable to Directors should not stand in the case of Governor and Deputy-Governors. The atmosphere of the Secretariat is particularly ill-suited to the development of business outlook, and though members of the Heaven-born Civil Service may claim versatility for any position in Government departments, they should be distinctly disqualified for service in an essentially business organisation like the Reserve Bank. The proof of this may well be found in the practice recently adopted by the Government of India of recruiting the Finance Member from the City of London".

It is more surprising that the Bombay Shareholders' Association does not put in a plea for a State Bank. From the antecedents of this Associa-

tion and from the general tenor of its propaganda, one should have thought that this Association would certainly have made out a strong case for a State Bank. It does not, in the course of its memorandum, raise the question at all. At the very start, it seems to make the assumption that a shareholder plan should be free from objections if the modifications suggested by it are effected. The main point made out in regard to the capital scheme is that statutory provisions are necessary for keeping control of the Reserve Bank in the hands of nationals. The following paragraph does not over-state the case :

> "The Reserve Bank will be a national institution. Its policy must, therefore, be directed on national lines. It follows that the controlling interest in the capital of the Bank should be Indian. How several countries have made statutory provisions for keeping control of their central banks in the hands of their nationals is a matter of history. In the Netherlands, Denmark, Czechoslovakia, voting rights are only exercised by nationals and in Lithuania it is provided that foreigners may not hold more than one-third of the capital. In Japan no person can be a shareholder of the Imperial Bank of Japan unless he is a natural born Japanese. The principle that control of national undertakings should be in the hands of nationals has been applied in England also to individual companies as can be seen from the fact that various British companies *e.g.*, The Rolls Royce Co., The Burma Corporation, the Buenos Ayres & Pacific Co., The Gaumont Pictures Corporation, the Calcutta Electric Corporation etc., recently altered their Articles of Association in such a way as to place restrictions upon the holding of capital by foreigners and their voting rights. For these reasons, my committee submit that a provision should be inserted in the Bill to the effect that 75 per cent. of the paid up capital of the Bank at any time should be held by the nationals of India".

One should think that even 25 per cent. for non-nationals is too big a slice of the capital.

As regards the composition of the central board the Association says :

> "My committee further urge that the Central Board should be so constituted as to ensure that at all times a majority of the Directors shall be natural born Indians. The Directors of the Bank of England are required to be natural born or Nationalised British subjects".

The demand put forward by the Association is modest to a fault. What is really needed is that a maximum should be fixed to the number of non-national directors. Inclusive of the Governor and/or Deputy-Governor, not more than three should be non-Indians.

Otherwise the memorandum of the shareholders' association follows the line of routine discussions. Reference should, however, be made to the views of the Association regarding proxies. The Association is fully competent to discuss this matter as it has considerable experience of general meetings and of the uses and abuses of proxies. The Joint Select Committee should give careful consideration to the following views of the shareholders' association :

> "A clause should be added precluding every director, every member of a local board and every employee of the bank from canvassing proxies. It is my committee's experience that the influence of directors in canvassing proxies has prevented the independent exercise of their voting power by shareholders.
>
> Again, permanent proxies which authorise the proxy holder to vote at any meeting as he likes should be prohibited because it is not in the interests of a corporation that its shareholders should sign such proxies before being appraised of matters coming up for consideration at the meetings where the proxies are to be used. It may be mentioned that Articles of Association of various companies lay down that proxies would be inoperative after a certain period."

In support of the points advanced in the above extract, the Association has furnished, in an Annexture, instances of companies whose Articles of Association provide that proxies shall be inoperative after a particular period :

1. Art. 48 of the Westminister Bank lays down that no instrument appointing a proxy shall be valid after the expiration of two months from its date.
2. Art. 66 of Barclays Bank lays down that no instrument appointing a proxy shall be valid after the expiration of six months from its date.
3. Art. 80 of the Central Bank of India Ld., lays down that no instrument appointing a proxy shall be valid after the expiration of twelve months from its date.
4. Art. 56 of the Punjab National Bank lays down that no instrument appointing a proxy shall be valid after the expiration of twelve months from its date.
5. Art. 92 of the Tata Iron & Steel Co., Ld., days down that no instrument appointing a proxy shall be valid after the expiration of twelve months from its date.
6. Art. 93 of the Bundi Portland Cement Co., Ld., lays down that no instrument appointing a proxy shall be valid after the expiration of twelve months from its date.

While Bombay has taken the Reserve Bank Bill quietly, it has set its hand to a vigorous programme for arousing public opinion as regards the ratio question. The Currency League of India has been started with Seth Mathurdas Vissanji Khimji as President. On the Executive Committee are to be seen names like Mr. Ramsey Scott and Major Vanrenen. This shows that the European textile interests of Cawnpore as well as the agricultural interests of the Punjab are now interested in the propaganda against the present ratio.

The Currency League has already held two public meetings and issued two bulletins. The first bulletin contains the proceedings of the first public meeting of the citizens of Bombay. The second bulletin refers to the resolution moved by Mr. (now Sir) R. K. Shanmukham Chetty in September, 1931 as also to the speeches made in the Assembly last September on this topic.

* * *

So far as the Joint Select Committee on the Reserve Bank Bill is concerned, Bombay will be represented by Mr. Pochkhanawalla on behalf of the Indian Joint Stock Banks and Mr. Cook on behalf of the Exchange Banks Association. I also understand that Mr. Lammond of the Imperial Bank, who has just arrived from London, will stay in Delhi to watch the proceedings in connection with the Reserve Bank Bill. Mr. Cook is expected to reach Delhi on Friday night and Mr. Pochkhanawalla on Saturday night.

I understand that, from your side, Mr. Cromartie will represent the Exchange Banks and that the Managing Governors of the Imperial Bank will represent the Imperial Bank. Sir Purshottamdas Thakurdas and Rai Bahadur Badridas Goenka will also represent the Imperial Bank.

The idea seems to be that all the representatives of the banking interests will sit together in conference with the joint committee. There will be no question of examination of witnesses. The views of the bankers will be invited on such special points as have been set apart by the committee in its first week's labours for elucidation in consultation with bankers who should be able to speak with authority on monetary conditions in India.

Mr. Nalini Ranjan Sarker, as President of the Federation of Indian Chambers of Commerce, was invited to nominate one representative to speak for the indigenous banking community. He could not think of a likely name from his province; and I gather that he has asked for the views of his colleagues in Bombay as to the nomination to be made.

There has been a considerable fall in the exports of gold from Bombay to Europe and America during the past two weeks. This is stated to be due to the price of gold in India being high in parity to the price in London. While, during the week ended October 7, bar gold to the extent of Rs. 1,54,63,858 was exported, only Rs. 20,14,675 worth of the yellow metal was shipped during the week ended Saturday, October 14. A slight increase over this figure was recorded this week when the shipments of gold amounted to Rs. 33,77,800.

The s.s. CASTALIA which sailed for Liverpool on October 17, carried to that port bar gold of the value of Rs. 10,84,754, while the P. and O. mail steamer, CORFU, which left for London on Saturday, took two consignments of bar gold, one of Rs. 22,55,904 for London and the other for Rs. 37,142, meant for Marseilles.

The total exports of gold since Great Britain went off the gold standard now amount to Rs. 1,47,22,92,927.

"WATCH-DOG".

SOUTH INDIA

(From Our Correspondent)

Madras, October 25.

We in Madras are quite proud of the deserved repute which Sir T. Vijayaraghavachariar, Vice-Chairman of the Imperial Council of Agricultural Research, has attained. India has not produced a finer type of official. Efficient in every manner of work entrusted to him and, at the same time, capable of a broad outlook. Red tapism in the dictionary of Sir T. Vijayaraghavachariar stands only for methodical and precise work. It does not stand for humdrum routine. He is the kind of official who could take a non-official point of view on every question he has to tackle. His is a varied and rich experience ; he has a facile and comprehensive versatility ; he has a quick mind, keen understanding and ready judgment ; he is urbane and cultured ; a senior in service, old in age, he has all the zest and ardour and enthusiasm of youth. Wise and mature and sagacious, he is yet simple as a child, loving, and loved by, all he comes in contact with.

The occasion for this panegyric is the breezy, scintillating and essentially thoughtful address which he delivered at the 22nd Agricultural Conference held in Coimbatore. The speech represents the essence of his experience of the Agricultural Research Department with which he has been connected almost from the beginning. His remark about the apathy of the Government towards agricultural problems is a truth, a home-truth and a home-thrust.

The plain fact is that India is the largest agricultural country in the world. India is a country, which, however much might be industrialised in the future, would still essentially remain an agricultural country. When agriculture is thus all in all, what is the amount which the Imperial Government and the Provincial Governments spend upon agriculture. It is eight pies per cultivated field in India, four annas in Japan and eight annas in the United States. The essence of the problem of national re-building in India is a proper appreciation of the importance of agriculture. Yet, agriculture is the one department for which adequate means have never been supplied.

Sir T. Vijayaraghavachariar said that he was almost ashamed to tell a visiting American or a visiting European, when the latter asked him what was the amount given to the Imperial Council, that that it was Rs. 5 lakhs. The Vice-Chairman of the Council considers that Rs. 50 lakhs would be a moderate sum for a Council which dealt with the whole of India.

Everyone talks of world depression. What is the depression due to? We have heard of several theories about the depression ; but everybody agrees that the depression is one primarily in agricultural products. One should have supposed that when we have got to deal with agricultural depression, far from carrying out retrenchment in the scientific departments dealing with agriculture, they would rather increase the staff and strengthen the forces which deal with the depression. Wherever governments have to effect retrenchment, wherever economies have to be carried out, it is the scientific departments that are first chosen as the proper victims.

Yet, "the Army Department is not in the habit of retrenching when there is an enemy at the gates and I should have supposed that, speaking like a layman, when there is agricultural depression, far from thinking of retrenchment in the agricultural departments, governments all over the world should rather strengthen them. I cannot expalin the paradox."

In this context Sir T. Vijayaraghavachariar puts forward a suggestion. In the Viceroy's Executive Council, it is provided that certain members should be I.C.S. men, certain other members should be lawyers and so on. Why should not a provision be made that one member should be a scientist or a man who has scientific training?

The real trouble is that people have still the old medieval notions. In the middle ages, they considered that people who worked in laboratories and discovered things were magicians, wizards that ought to be burnt. We are now more civilised in our methods. Nowadays we do not burn agriculturists and scientists, we just retrench them. One should think that we have need of a staff of people versed in agricultural economics who can deal with these questions from the standpoint of the peculiar needs of India. But what do we find? "Hardly is there anybody who deals with agricultural economics. Let us take the Imperial Council of Agricultural Research. One should have supposed that that Council can have had an eminent authority in agricultural economics. But there is none."

Sir T. Vijayaraghavachariar expresses the hope that when the new form of government comes in, the Agricultural Department will play a very much larger part than it has so far done ; that a great deal of work would be done by them ; that funds would be increased year after year ; and that India would have a proper research staff equipped with agricultural knowledge and competent to deal with agricultural problems.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

GREAT BRITAIN

Trade Revival under Way

The developments and disclosures of the week are calculated to encourage Britishers, not only to have a chuckle at Americans' troubles but also to pat themselves on their backs for their own record in the field of trade and commerce. Among such encouraging factors, the trade figures for September last must be counted first. They tend to confirm the general view formed on a rough appraisal of current signs that an incipient trade revival is well under weigh. Whether or not the policy of the Government, comprising tariffs and trade treaties, has much to claim for itself, it seems certain that Britain has been able to manage without the sensational, and sometimes somewhat questionable, policies of Mr. Roosevelt's Recovery Administration.

The total exports in September amounted to as much as £35,630,000 against £35,297,184 in August and £29,130,417 a year ago. The usual difficulty of reducing the two months to a comparable basis by counting the number of working days in each and striking the average thereof is saved in this instance, as both the months had 26 working days each. The same degree of improvement is also noticeable in the total imports, which stood at £57,772,000 against £56,754,458 in August and £54,266,652 a year ago. If the re-export of foreign goods were deducted from the total exports, it would be found that exports of British goods increased by over one million pounds in September following a similar increase in the previous month; and the significance of this upward trend is enhanced, if it is added that the upturn has come about at what is normally a quiet time for exports. Last year exports fell by about £4 million within January and September and this year they have risen by nearly the same amount.

The following table gives the total imports, exports and re-exports during the month of September :

TOTAL IMPORTS

(Thousands of £'s)

	1933 Sept.	1933 Aug.	1933 July
Food, drink & tobacco ...	29,782	26,957	26,311
Raw materials ...	14,481	16,426	14,870
Manufactures ...	13,052	13,047	12,049
Total imports* ...	57,772	56,754	53,706

*Including animals not for food, and parcel post.

BRITISH EXPORTS

(Thousands of £'s)

	1933 Sept.	1933 Aug.	1933 July
Food, drink & tobacco ...	2,632	2,335	2,292
Raw mattrials ...	4,053	3,803	3,879
Manufactures ...	24,642	23,910	22,789
Parcel post ...	857	909	839
Total exports* ...	32,226	30,997	29,847

*Including animals not for food

RE-EXPORTS

(Thousands of £'s)

	1933 Sept.	1933 Aug.	1933 July
Food, drink & tobacco ...	883	1,204	948
Raw materials ...	1,430	2,092	2,220
Manufactures ...	1,055	995	1,103
Total re-exports* ...	3,404	4,300	4,324
Transhipments in bond ...	2,033	2,350	1,845

*Including animals not for food

It is useful to study the figures of retained imports of raw-material, as it is such retained imports that afford an indication of the general outlook of industry and the prospects of production in the months following. The following table shows the steady improvement that is noticeable in this regard in the outlook of British industries :—

Retained Imports of Raw Materials

(Millions of £'s)

Sept. ...	13.4	10.0	11.0
Aug. ...	12.7	10.4	11.3
July ...	12.2	10.7	11.6
June ...	11.5	11.2	11.8
May ...	11.9	12.2	12.4
April ...	11.2	12.7	12.0

It is necessary to isolate the accidental factors from these figures of retained imports of raw-materials. To some extent, imports of cotton and wool in this period of the year cannot be expected to continue at this level in the coming months; for it is possible that imports of wool have been stimulated unduly by the expectations of sharp rises in the price of wool, and it is therefore significant that the actual values of retained raw-materials, even excluding cotton and wool, are now running at the highest levels for the last three years as can be seen from the following record :—

£000,000

	1933	1932	1931
Jan.	7.1	9.3	9.1
Feb.	6.1	8.4	6.5
Mar.	6.1	7.1	7.3
April	6.7	6.4	7.0
May	7.2	5.9	7.1
June	7.1	8.0	7.8
July	8.2	7.4	9.4
Aug.	10.4	7.9	9.3
Sept.	9.7	7.4	8.3

Here, too, such factors as the larger shipments of timber in the latter part of the season consequent upon the embargo on Russian products, which was imposed after the trial of the British Engineers at Moscow, the higher values due to higher raw-material prices, big consignments of anti-locust galvanised fencing to Argentina, have to be taken into account. But all said and done, the general trend towards increased business activity and larger volume and value of exports still remain unmistakable.

Among exports, coal has given the best account of itself. Compared with 3.27 million tons in July and 3.20 millions in August, the September export is about 3.42 millions. Weather conditions in the Northern Hemisphere suggest that the seasonal demand for coal during this year must in any case be larger than during the last, which means that in the improvement in the exports of British coal, there is no seasonal factor involved. At any rate, seasonal changes cannot explain such a marked disparity as that between 3.42 million tons in September 1933 and 2.82 million tons in September 1932. It may easily be guessed that the improvement is most marked in the case of the Scandinavian countries, as the trade treaties with these nations contain specific provisions for better off-take of British coal.

Iron and steel exports are also better, the exports during September being 2.47 million pounds against 1.87 million pounds in the corresponding period of 1932. For the nine months ending September, the exports of iron and steel amounted to as much as 21.33 million pounds against 20.79 million in 1932.

As for the rest of the heavy industries, the following figures clearly suggest a better outlook £1,453,073, against £510,722 in September, 1932; of cutlery, &c.—£550,505, against £403,688; of electrical goods—£539,389, against £432,872; of machinery—£2,306,437, against £1,881,549; and of vehicles (excluding ships)—£1,371,880, against £1,091,240.

The textile industries have not, it must be admitted, made as good a showing as the rest, but

Air Mail Week

there is also some encouragement in the September figures. With cotton, such encouragement can be derived only by comparing September with a period of last year, which was influenced by stoppages. But there is some sign of a revival from the low levels which piece-goods exports reached during summer.

Fall in Bank Advances

The average weekly statement of the London Clearing Banks for September apparently contradicts the conclusion which the September trade figures may yield regarding a trade revival. The statement is interesting not only on this account, but also because of its suggestion about certain new trends and developments. The chief changes are summarised in the following table:

Deposits ...	1,957.9	1,965.6	1,864.9
Cash ...	214.8	208.1	192.7
Call money ...	90.6	90.7	113.7
Bills ...	355.0	359.0	392.2
Investments ...	563.2	563.4	383.0
Advances ...	749.7	758.2	802.7
Acceptances, &c. ...	105.9	105.5	74.8
	%	%	%
Cash to deposits ...	10.97	10.58	10.44
Advances to deposits	38.3	38.6	43.0

The most significant movement is the further contraction of £8½ million in advances to £749½ millions, the lowest figure touched since early 1923. As a consequence, deposits at £1,957,900,000 are down by £7,700,000. Investment holdings at £563,200,000 are practically unchanged on the month, but represents an increase of £180,200,000 over the corresponding total a year ago. The ratio of cash to deposits has also risen from 10.58 per cent. to 10.97 per cent., compared with 10.44 per cent. in September, 1932. These figures, considered by themselves, suggest that the increased activity of trade and commerce is rather an instance of wish being the father of the thought than the statement of a chief fact, but it has to be remembered that in any recovery from a trade depression, it should be possible in the earlier stages for industry to finance itself with liquid resources, accumulated through the reduction of staffs and repayment of outstanding debts. Besides, the reduction in Bank advances by a third does not even cover the full extent of the fall in prices, so that it is quite conceivable that a larger interchange of goods and services is taking place with apparently reduced volume of bank advances.

More Employment

The returns of the Ministry of labour regarding unemployment are more directly confirmatory of the conclusions about the revival of trade. In his speach at the Bankers' Dinner at Mansion House a week ago, the Chancellor of the Exchequer had led the public to expect a substantial decrease in unemployment.

The numbers of unemployed persons on the registers of Employment Exhanges in Great Britain were 1,857,064 wholly unemployed, 393,517 temporarily stopped, and 86,146 normally in casual employment, making a total of 2,336,727. This was 74,410 less than the number on the registers at August 21, and 521,284 less than a year before. The total on September 25 comprised 1,929,896 men, 57,076 boys, 309,925 women and 39,830 girls.

At August 21 there were 1,843,517 wholly unemployed, 483,432 temporarily stopped, and 84,188 normally engaged in casual labour, making a total of 2,411,137. The number of employed persons was 9,857,000. At the end of September, 1932, there were 9,232,000 employed. The total of unemployed was 2,858,011, composed of 2,119,218 wholly unemployed, 639,160 temporarily stopped, and 99,633 casuals.

The improvement in the employment was well spread over all the industries and particularly in coal mining and iron and steel manufacture.

The week has seen a revival of the proposals for rationalising the cotton textile industry of Lancashire. That London believes that such proposals have actually been placed before the Government and the City is evident from the strength that was noticeable during the middle of the week in textile shares. The Egyptian section was particularly strong, as it is believed that the measures proposed for the control of production and prices in this section are more practicable and are nearer fruition than the proposals in respect of the American section. Perhaps, the inspiration for Lancashire tackling the task of rationalisation, in spite of earlier disappointments, is derived from the speech of Mr. Walter Runciman, the President of the Board of Trade, on Wednesday. On that occasion Mr. Runciman said "we have not yet regained our position as dominant cotton exporters in the world and we may not regain the position of twenty-five years ago, but we are going to make a big effort to place that vastly important industry upon a satisfactory footing and after that we shall turn our attention to steel." Mr. Baldwin has hinted that the problems of the cotton trade are now having the attention of the Government. The public have had no inkling of the nature of the proposals that have been formulated by the interests concerned. But there can be no doubt that a conference has already taken place between the Board of Trade and the leading employers in the American spinning section. The five representatives, who came to London from Manchester, have successfully withstood the attacks of press reporters. Though any scheme of rationalisation will be widely welcomed, it would be unwise to underrate the difficulties in the way of bringing about a definite settlement of outstanding problems. As at present constructed, the cotton spinning trade in Lancashire is divided into so many units that it seems impossible to secure united action in the way of controlling prices and production. The only improvement in the position is that banks are reported to be sodidly behind the industry in the effort to secure an amalgamation which must necessarily involve a scrapping of old mills.

UNITED STATES OF AMERICA

Inflation in the Balance

The war debt talks are still shrouded in mystery and treated with apathy. The Conferences were resumed on October 10 between Sir Frederick Leith Ross, Chief Economic Adviser to the British Government, Sir Ronald Lindsay, the British Ambassador and Mr. Bewley, the Financial Secretary to the British Embassy, representing the British Government, and Mr. Acheson, Under Secretary of the Treasury and Mr. Livesey, Assistant Economic Adviser to the State Department, representing the American Government. The meeting lasted two hours and the negotiations were continued on Thursday. But nothing is known of what actually transpired at those meetings. There has been no official communique ; and all the evidence we have is a number of press reports with the usual flair for guess work. It is generally believed that Britain would offer to make 10 per cent. payment, which is bound to be rejected. In that case, the offer of a lump sum of 100 million dollars is considered likely ; and it is interesting to note that the payment of 1000 million dollars would represent the principal of the debt, less all previous payments and a reduction of 35 per cent. on account of the depreciation of the dollar. It need hardly be added that, should this proposal meet with the approval of the American Government, the British representatives contemplate floating an international bond issue in respect of this payment. It is doubtful if any interest will continue to attach to the arguments that the British represen-

Air Mail Week

tatives may have to advance in behalf of the claim for a reduction and revision of the old basis of the debt settlement. But according to the exchange, Sir Frederick Leith Ross presented four points, all supported by statistics, in favour of the immediate reduction of the British debt. That the British debt was not a commercial debt but one incurred out of over-powering necessity for a common interest, is the point which comes first logically and chronologically. The second point urged is that debts incurred for the purpose of destructive warfare and consumed in ammunition and the like cannot be expected to be repaid in the same manner as debts incurred for economic investment. The more valid points are, firstly, that the funding of the British debt was on more onerous terms than those accepted by other Allies and secondly, that world conditions have undergone a radical change since the settlement was reached.

It seems unlikely that the discussions between the respective governments could have followed such lines. For the need for revision is implicitly accepted by the American Government and the principal differences of opinion, where they occur, should centre round the extent to which such reduction might be effected. It seems that, so far as the American Government are concerned, they will not be able to bring themselves to give these talks all the attention and energy that they require and deserve, and that the talks are kept up merely in deference to form and diplomatic courtesy. One circumstance, which does not fit in with this surmise, is the report that Mr. Acheson has had a personal interview with Mr. Roosevelt at the end of the week to discuss matters connected with the question of war debts. This has led to the belief that the British representatives have succeeded in making a proposal requiring the personal consideratios of the President himself. It need hardly be said that, if this report were true, the war debt talks are not after all such a formal affair as one would have to think otherwise.

The continued recession in business and the dullness of Wall Street suggest clearly that the next step forward will depend a great deal on a solution, however tentative of the problem of exchange. During the last two weeks, talk of exchange stabilisation, whether through the establishment of an exchange equalisation fund or through a declaration of the value of the dolllar, have been rife. And though the President has not left unanswered the threat that the bankers would give no cooperation in the expansion of credit, unless the Recovery programme and the instability of the dollar were definitely disowned, there is no doubt the attitude of the bankers has begus to spread to other sections of American economy. Wall Street has found that there are more prospects of activity in the markets after a frank stabilisation of the dollar than if the old cure of currency instability were to be continued. Industrialists, possibly, feel that, in as much as bankers are prepared to expand credit only on the stabilisation of the dollar, their interests are dependant upon the abandonment of the policy of maintaining the instability of the dollar. The most surprising and, to that extent, significant development is the declaration of the American Federation of Labour in favour of stabilisation. And there are many who even assert that the agricultural community also want a *de jure* devaluation of the dollar and not inflation of currency.

As to the attitude of the President, there has been nothing to suggest that our reading of the situation is in any material respect incorrect. Mr. Roosevelt has formulated for himself certain guiding principles. Perhaps it would be more correct to say that in his recovery programme he has been guided mainly by his freedom from most of the traditional economic obsessions. On this question of monetary policy, he asserted his freedom from the cramping notions of "sound" finance. So may it be said is he free from the dogma of exchange instability? He has an eye on the balance between production and consumption, and in this view, foreign trade and exchanges necessarily recede into the background. Even in regard to inflation he does not hold that inflation, such as insisted on by Senator Thomas, is indispensable. He gave the recovery programme a sensational start which kept it going without the stimulus of an actual inflation. And since then he has been content to wait. As the *Financial News* aptly remarks, his attitude is one of experimental approach. Faced with the demand for currency inflation, he answered it with proposa'ls for expansios of credit. Now he is intent on keeping the situation in such a way that inflation and stabilisation would be equally feasible, accordnig to the needs of the time.

In a general view, it is difficult to see what advantage America stands to gain by continuing the dollar in its present instability. And in as much as Mr. Roosevelt has already instituted the system of purchase of America's newly mined gold by the Treasury at prices fixed in accordance with the value of the dollar in terms of gold currency, he might just as well try to perfect official dealings in gold to pave the way for a stabilisation of the dollar. As for the inflationary needs of American economy, it must be remembered that, to the extent the dollar is now under-valued, stabilisation would not mean a denial of the needs for an increased volume of currency. The dollar is under-valued in the sense that there has been a discounting of inflation not already effected, and also that there is an excess of central bank credit and ordinary currency over the requirements at the current level of business activity.

Mr. Bruere, the Credit Co-ordinator appointed by the President, last week has already set to work. He has formulated his plans for increase of 1000 million dollars in the purchasing power of the country by the thawing of the frozen bank deposits. A new Liquidating Corporation with a capital of 1500 million dollars provided by the Reconstruction Finance Corporation is to be formed to take over the assets of banks which have remained closed since the bank holiday. According to the estimates of the

Air Mail Week

Credit Co-ordinator, nearly a half of the total tied up deposits of closed up banks will before long have started to flow into the financial and economic system. The pumping of credit has already got under way. By the end of December, the R. F. C. had subscribed 58½ million dollars to the preferred stock of banks which have been re-opened. And during the years in which it has functioned the R. F. C. had loaned 1293 million dollars to banks. The loans made amounted to as much as 3100 million dollars of which 841 had been regained.

The Liquidation Corporation is the latest of the many schemes that call for colossal capital investment; and the occasion is appropriate for a consideration of the total capital requirements of the Government in respect of the schemes that have a definite and large place in the recovery programme. The *Financial News* has made a useful resume of the new schemes—

"It is something like this: "Recovery" public works scheme, $3,000,000,0000; Liquidation Corporation, $1,500,000,000; States relief (direct), $500,000,000; Muscle Shoals, $500,000,000; reafforestation, &c., $500,000,000; Reconstruction Finance Corporation (so far this year, net), $925,000,000; Commodity Credit Corporation, $300,000,000; farming grants, $25,000,000; total, $7,250,000,000, or about £1,500,000,000."

As a matter of fact, not more than a third of this amount has been spent. But the time is come when Mr. Roosevelt will have to consolidate the economic gains of his recovery proposals by putting into execution as many of such schemes and as early as possible. And for this, the Government will have to formulate a programme of new borrowing. The dimculty is that, in order that the Government might secure the necessary credit, they will have to afford every assurance to the average investor in the country that the value of his loans to Government is not liable to serious alteration by changes in monetary policy. There is thus an antithesis between the programme for new loans and the programme of the recovery, in so far as the latter involves inflation or even the postponement of a decision on questions connected with money and exchange. The country is aware that the total public debt has grown from 16 milliard dollars in 1930 to over 23 milliard dollars; and the schemes now contemplated will effect an increase of about 4½ milliards; and there is no sign that the end of such schemes has been neared. Considering the close relation between successful new borrowing and stabilisation of currency, it is not surprising that every rumour regarding a new loan is coupled with a rumour regarding stabilisation. The report has been going round that the dollar will shortly be stabilised at 65 cents and that such stabilisation will be accompanied by an issue of Greenbacks. In the wake of such rumour followed the announcement of the Treasury of plans for the refunding of the Fourth Liberty Loan. Holders of 1,875,000 dollars of the 6,000 dollars outstanding are to be offered 10 or 12 year bonds bearing interest at 4¼ per cent. for the first year and 3¼ per cent. for the subsequent years or, if they choose, cash. These refunding plans involve the issue of 500 million dollars of 3¼ per cent. 12 year bonds to be sold for cash and the issue of some 2000 dollars of such bonds to be exchanged for Fourth Liberty Bonds. The cash received is to be used for current Government expenses. The plan has had a good reception in the market; and the new bonds are expected to sell at a premium above the cash offering. As the bonds have not been called in for payment in Greenbacks, it is believed that the monetary plans of the administration do not include any scheme of paper money issues, at least at present.

GERMANY

BREAKING THE FETTERS OF INTEREST

Dr. Schacht has continued his onslaughts on the foreign creditors of Germany. The main element in the strategy which he has pursued in this warfare is a herce attack on foreign creditors and threats of wholesale loss of principal and interest, followed by negotiations for a settlement. At one time, it was supposed that Dr. Schacht was actuated by a whithering contempt for foreign countries. But it is not difficult to understand, that it is part of the tactics necessary for securing his ends. During his visit to the U.S.A. in 1931, Dr. Schacht made a fierce attack on the foreign lending policy of America during the War and made carping references to the mentality of those who invested in foreign countries. After his re-advent at the Presidency of Reichsbank, he has set himself to paint a picture of German finance and economy, which would induce foreign creditors to believe that anything that Dr. Schacht is prepared to give them is a small mercy, for which they must be grateful. Readers of these columns are aware of the devices which he employed to convince international opinion generally, that the reserve position of Reichsbank is such, that it would be dangerous alike to Germany and her creditors, if the reserves were drawn on for meeting the foreign commitments of Germany. From this has followed a series of negotiations, in which the foreign creditors of Germany have lost consistently. His tactics have been extremely effective. And so has been his threat to include the Dawes and Young loans within the scope of his transfer moratorium. Dr. Schacht should have known that ultimately the Dawes and Young Loans would have to be exempt; but he knew well the tactical value of such a sensitive bargaining point.

Then again, the nogotiation, concerning the Belgian Mark note controversy namely, the claims of the Belgian Government against the German Government for German Marks left in Belgium after the Armistice, which has dragged on ever since the close of the War, reached settlement only a few days ago, by which payment would be made to Belgium as to three-quarters of the amount claimed in goods and as to the remaining one-quarter in money. These terms had to be extorted only by a threat to prohibit all imports from Germany. Now an agreement has been concluded with Switzerland; and another with Holland is tentatively in abeyance, despite previous assurances that concessions, granted to one creditor, would be granted to all. It is, however, believed, that the discussions with representatives of the Dutch Government will be resumed in Berlin within a few days.

German Scrip

Before dilating upon the features of the new Swiss-German scrip agreement, the Reichmark

scrip which is proposed to be issued to foreign holders of German Bonds bears a close resemblance to the Reichbank notes. The wording on a scrip for five Reichmarks may be translated as follows:—

Scrip of the Conversion Office for German external debts in Berlin, issued by virtue of Article 4 of its statutes

FIVE REICHSMARKS

owed by the Conversion Office for German External Debts to the owner of this scrip. Its redemption takes place in accordance with Article 4 of the statutes of the Conversion Office

Berlin, August 28, 1933.

Conversion Office for German External Debts.

The Conversion Office for German External Debts was established through Article 2 of the Law on Financial Liabilities Abroad. Article 4 of its statutes is as follows:—

"The Office may issue against the sums paid to it non-interest-bearing reichsmark scrip. The conditions of redemption of the scrip are decided by the Reichsbank."

As pointed out already, the German and the Swiss Governments signed a *protocol*, which has been supplemented, by an agreement between the Reichsbank, the Konversionskasse and the Gold Discount Bank on the one side, and the Schweizerische Creditanstalt on the other. The object of this agreement is to secure the smooth and rapid working of the transfer plan.

The machinery of the plan will work as follows:—

As regards individual Swiss bondholders, whose identity is known to the Konversionskasse through the payments made by the German debtors, the Konversionskasse is to pay the cash quota of 50 per cent. and the proceeds of the scrip into the postal account. The Swiss Post Office will then advance the difference between the actual proceeds and the *full face value, so as to be able to pay the full 100* per cent. to the Swiss bondholders immediately.

In order to secure payment of coupons of German foreign loans issued in a currency other than the Swiss franc, the Swiss creditor has to send his coupons through his bank to a German agency, and will afterwards receive the general transfer quota of 50 per cent. in the currency concerned, and the other 50 per cent. in scrip. The Swiss bank syndicate will then realise these scrip and advance the difference between the realised price and the face value, so that the Swiss bondholder in this case likewise will get 100 per cent. for his scrip.

In the case of loans issued in dollars, the coupons will be paid in paper dollars.

It is expected that the transfer of cash and scrip for the July and August coupons will begin in the middle of November.

Dr. Schacht, however, expressed surprise at the uncharitable criticism that he broke his promise of treating his creditors alike and that he introduced an iniquitous debt-bargaining system, by which German exports were forcibly augmented. He declares, however, that Germany is ready to negotiate on the subject with any foreign Government, that the obtaining of the full transfer of scrip by a corresponding additional purchase of German export goods is absolutely in conformity with the principle, recognised by the World Economic Conference in London, that Germany is able to fulfil her obligations only through exports, and that Germany does not want to disown her obligations, or to become a defaulter, but to pay her debts.

It is claimed that the Swiss-German Agreement has been easier to come to, because Switzerland has introduced a system of quotas and of control over Swiss holders of German bonds, which forms a good basis for a new agreement. But, Germany is perfectly willing to sign a similar agreement with any other country on the same conditions.

The British Press is not satisfied with this excuse. It argues that the principles of bargaining the fulfilment of legal obligations against new trade advantage is one, which cannot be tolerated. It is also pointed out that, as Germany's favourable visible trade balance with Britain in the first half of the current year has been £6,538,000, or about £13,076,000 per annum, and as the total requirements for the service of Germany's entire sterling debts cannot amount to more than £5,500,000, discrimination against British bond holders will be disgraceful. The British Press also contends that the World Economic Conference has not said that a debtor country should pay its obligations only in countries which took such certain amounts of German Goods and refuse to pay them in countries which make no such undertaking. As just pointed out, Germany earns, by her trade with Britain, in six months much more than enough, to pay her debt service in Britain for the whole year.

British Action

Already, the London Protective Committee of German Bond-holders held a meeting to discuss the situation resulting from Dr. Schacht's decision to afford preferential treatment to Germany's creditors in those countries, which agree to increase the percentage of their imports from Germany. The Committee is likely to make its decision when it meets again. But, it is feared that Dr. Schacht will not take serious notice of any representation from an unarmed Bondholders Committee. He still seems to have some respect for foreign Governments. The British Press feels that it would be most unfortunate, "if our own Government gave Germany any trade concessions in the Swiss manner." If the London Committee's protests are ignored, representations will be made to the Treasury and Foreign Office in the hope of prompting official action, in respect of powers and to impose exchange clearing, to limit the import of German goods or to take such other retaliatory action as may be necessary. The statement that it will seek such powers should, it is hoped, in influential quarters, be quite enough to bring Germany to her senses. But the British Government might be unwilling "to jeopardize the chance of concessions on disarmament by harassing the German Government on an outside question." The claim of Germany for re-armament will, in all probability, wreck the Disarmament Conference. By then the London Committee would also make up its mind, and the Government may, perhaps, have a free hand to take the requisite action.

There is, however, the prospect of Germany herself affording a handle, at least for the mandatory Powers. German holders of colonial loans, floated before the War, for the development of the former German Colonies, have unanimously decided to bring an action for the recovery of their money against the mandatory territories and the mandatory Powers. The Bondholders expect the active support of the Government in their action and also financial assistance from Banks, which floated the colonial loans. Now, therefore, the mandatory Powers could bargain

W. LESLIE & CO., CHOWRINGHEE, CALCUTTA

Air mail

for the liquidation of Reichsmark scrips, if the mandatory Powers should entertain the claims of the German holders of colonial loans. It is certain that an interesting development promises to emerge out of this issue.

Reichsbank Law Revision

The Reichsbank applied to the Bank for International Settlements for authority to alter the Bank law, so as to give the Reichsbank greater liberty of action on the bond market and to abolish a general council of the Bank. This revision can only be done with the consent of the counsel of the Bank for International Settlements. The work of the general council of the Reichsbank, in connection with the Dawes Plan, was to watch the transfer operations, connected with reparations. As the Dawes Plan no longer has any effect, Germany claims that the council should also cease to exist. When the German application came before the Council of the Bank of International Settlements, no comment was made upon the merits of the proposal; but the council did not oppose it. Although Germany has no longer to pay reparations, she is bound by the Young Plan, which provides for a court of arbitration to decide the point, in case the Bank for International Settlements objects to the alteration of the Reichsbank law. As already mentioned, the Council of the Bank for International Settlements did not oppose the German proposal. It can, therefore, be taken for granted that the general council of Reichsbank will be abolished.

Cover for note Circulation

Another item that will come up for consideration of the Council of the Bank for International Settlements is the cover for Germany's note circulation. Though the percentage cover will not be diminished, the Reichsbank seeks authority to buy medium and long-period bonds and to use these as cover for the note circulation, a proceeding not allowed by the Hague Convention. Dr. Schacht appeared, however, before the council, to explain the proposed modifications.

Balanced Budget

The new budget for 1933 was balanced at R.M. 5.8 milliards, as against expenditure and receipts of R.M. 6.6 milliords and R.M. 4.8 milliards in 1932 and R.M. 9.2 milliards and R.M. 8.1 milliards in 1930 respectively, so far as the central receipts and expenditure are concerned. Thus, it is seen that, for the first time in the past three years, the budget is balanced which is no small credit for the Reich, especially in view of the troublous times, not to speak of the economic depression, through which it has passed. The striking changes are in the following items:—

(In Million R.M.)

	1932	1933	Increase or Decrease
Wages and Salaries ...	695	709	14
International War burdens (excluding pension) ...	311	270	−41
External War Burdens ...	183	156	−27
Social Insurance ...	488	522	34
Unemployment Relief ...	888	491	−397
Amortisation of former deficits	420	100	−320
Fat subsidy		150	150
Wheat Control		79	19
Profit from preference shares of Dresdner Bank		103	103

FRANCE

RADICAL PARTY CONGRESS

On October 8, the National Congress of the Radical Party, which is the representative body of the French middle-classes, composed of small shopkeepers, civil servants, ordinary employees and *petit rentiers*, held its sessions at Vichy. The meeting was significant of the sense of discontent among the middle classes against tax-evasion, fiscal injustice and other abuses. The star features of the meeting were the stirring speech of M. Daladier, the French Premier and the momentous pronouncement of M. Vaillaux, who presided over the Congress, on the duty of public servants.

In view of the past success of the agitation by civil servants in getting the cut in salaries and allowances postponed by threats of strike, it is of exceptional interest that their political breathren of other occupations, showed little sympathy for their cause, at the Congress. This general attitude among the delegates was further strengthened by M. Caillaux's dictum, that public servants were bound by a special contract with the State and have absolutely no right to strike; and that their duty was to work for redressment by setting the example. The occasion for this declaration was the prospective 5 or 6 per cent. cut in civil servants' salaries and pensions, in order to reorganise the national finances. It is a matter of common knowledge that the basic malady of the national finances is the unbalanced budget. The present Cabinet's endeavour to reorganise State Finances is directed towards producing a balanced budget for the year 1934. Very soon, when the Chamber of Deputies meet, the programme of the Government will be made known, in all its details, to the public. In order to enlist the co-operation of the public servants for the coming task, M. Caillaux availed himself of the opportusity, as President of the Congress, to administer wholesome advice to them.

In this connection, it may be stated that the total personnel of all public administration in France, is approximately 836,390. This figure is exclusive of departmental (district) or communal officials, receiving public pay. It can be easily seen, therefore, that there is much room for retrenchment, on the score of numbers alone.

Turning to the state of Government receipts, the August returns bring the total yield for the first eight months of the year to 23,364½ million francs, or 1,176¼ millions less than budget estimates. The principal drop was in indirect taxation, such as customs duties, which were 73¼ millions (or nearly 20 per cent.) below the yield, registered in August last year. This disparity between income and expenditure also warrants the application of drastic remedies.

The other item, besides the cut in civil servants' salaries and pensions, is a 10 per cent. levy on dividend warrants, cashed in France. Apart from these two definite items of information, we have only the Premier's declaration that "the Government has strictly measured the indispensable sacrifices, which will be very plainly inferior to those which have been imposed by every other great nation in the world. We have foreseen efficacious measures against tax-evasion and fiscal fraud, which are to a great extent responsible for increasing the burdens of honest citizens." The Premier also made it clear that there could be no question of further devaluation of the franc or of the adoption of the policy of inflation.

The speech of the Premier, no doubt, gave clear indication of his firm resolve to attempt the redressment of French finances. But, he betrayed lack of confidence in the requisite support in the Parliament, when he mentioned of the possible alternative of the Government resigning. It is to be hoped, however, that public opinion will make itself so felt that the Deputies realise their paramount duty in seeing to the balancing of the budget.

Disarmament Problem

The other subject, which claimed the attention of the French Premier at Vichy, was the Disarmament problem. It had two aspects, disarmament in France and rearmament in Germany. As regards the first,

M. Daladier made himself clear is these terms: "We are resolved to attempt no new reductions of our forces without an international agreement, sincere and in good faith, which organises progressive disarmament by the establishment of permanent and automatic control, the carrying out of which is effectively guaranteed." Turning to Germany, M. Daladier reiterated that no one contested her right to exist as a great nation. Herr Hitler protests, in season and out of season, that the Reich has a peaceful aim, though he is scrupulous in taking care that no alarming news of the militant character of the Reich leaks out from Germany. The French Premier, therefore, posed the question: "Why, then, this mobilisation of fighting youth on the other side of the Rhine?", and why should Germany be keen on making "sample" weapons of the "banned" type, if only they have to be scrapped within the next few years? The French yearning for peace is admitted by eminent Germans, like Herr Rosenberg. Can Nazi Germany be credited with a similar frame of mind? Do the activities of Nazi storm troops inspire such confidence regarding their pacific intentions as in those of France? Only the future can divulge if Herr Hitler's militant gestures are as inocuous as Signor Mussolini's swash-buckling of an earlier day. But, it can be surmised that France does entertain hopes that the Reich, after the new elections, will be in a more reasonable frame of mind to enter upon profitable negotiations, upon this vexed question of Disarmament.

Meanwhile, the much advertised discovery of a new gas by two French scientists, who refuse to reveal its secret except in the event of an invasion of France, should sober down the militant ambitions of the Reich, in direct proportion to the French reassurance in the matter of Disarmament.

The New Quota Policy

Though Germany has, so far, not been able to see eye to eye with France, on the question of Disarmament, self-interest has compelled her to conclude negotiations for waiving her right, under the Treaty of 1927 and its amendment of 1932, to the most-favoured-nation treatment in the application of quotas on exports to France. Germany has, however, reserved the right to retaliate in raising duties or imposing quotas, in the event of unfair treatment in the distribution of French quotas.

Apart from the financial muddle, the incentive for the French revision of her commercial policy is the galling fact that France buys from Germany, double of what she sells to Germany whereas the exports to Germany amounted to only 1,062,000,000 francs. For the first eight months of this year, imports from Germany reached a total of 2,081,000,000 francs. As a source of French buying, Germany exceeds both the United States and Great Britain. The other factor, which compelled the new commercial policy, was the agitation, by French exporters, for relief either in the direction of measures for beating down restrictions abroad, or for the reduction of cost of living, and therefore production, at home. As the French Chamber of Deputies is dominated by agricultural interests, the policy of agricultural protection has become an inevitable necessity the French Government, therefore, decided, as from October 1, to reduce all import quotas by 75 per cent., except where countries should be disposed to offer concessions, warranting increase of the quotas. But, the French Government was considerate in not introducing this violent change, at such short notice immediately. So, the old order is to continue till November 1.

The Ministry of Agriculture is, however, pursuing a policy, independent of the Ministry of Commerce, as the latest announcement of renewal of total quotas on agricultural products for three months, shows. In certain cases, the quotas were reduced very sharply; but the Minister reserves the right to increase them by 33 per cent., and in the case of butter by 60 per cent. In the ultimate analysis, the policy, pursued by the Ministries of Agriculture and Commerce, is one and the same, except in methods, namely, the method of bartering quotas. Thus, a special allowance is to be made for butter from Holland, in return for a certain purchase of French wheat by Holland.

The future certainly promises to favour higher duties or greater restrictions between Germany and France, than before, on commercial interchanges. Germany is keen on maintaining an export surplus, in order that the currency may be kept stable and the Reichsbank strengthen its gold reserves. Thus, the advantage of the new commercial policy will be to set right the French adverse balance, in her relation with Germany. The French have very negligible investment, either on long, or short, term, in Germany. It is not, therefore, in France's interest to permit the continuation of the German export surplus against France. One-seventh of the import surplus into France from foreign countries is due to German imports. By adjusting the trade balance with Germany, France stands, in some measures, to reorganise he national finances.

The new quota policy can work well with the rest of the world, except the United States, as the American administration has no power to grant tariff concessions. With regard to Great Britain, there is scope for hard bargaining, in the event of further British quotas or tariff extensions or increases. Thus, the latest development of the French commercial policy is a bid for the redressment of the financial condition of France.

THE READING ROOM

Foreign Exchange and Foreign Bills, in Theory and in Practice: Ninth Edition: By W. F. Spalding: Sir Isaac Pitman & Sons, Ltd.: Pages 343: 7s. 6d.

Mr. Spalding's works on matters connected with money and exchange markets are well known classics in this branch of economic literature; and unlike most books that are known as classics, they are well-read and constantly brought up-to-date by the author. Of late, books on finance and economics have cause for more revision than the books on any other science. Not that economics is making new discoveries which alter the entire frame-work of existing knowledge, but that economists are finding the error of their old ways and trying to rectify them. This has only led to even more baffling doubts and controversies than had existed in the past. Mr. Spalding, however, deals only with those subjects in which there is little or no room for serious differences of what is and little or no question of what ought to be. The subject of foreign exchange is necessarily subject to the changes which are a reflection of the revolution now occurring in international currencies and exchanges. The author has done well to preserve the text-book character of his work and at the same time to enable a reader to be abreast of the most up-to-date developments. It is the besetting sin of most books that pertain to the market that they are provokingly elementary, making much of points that the average man would take little time to comprehend. Mr. Spalding's work is engaging from start to finish, precise, and comprehensive. It is bound to hold its own for a long time to come. An attractive feature in the latest edition is a series of charts with appendices affording a lot of useful information.

Topical Extracts:

INTERNATIONAL DEBTS AND INTERNATIONAL ECONOMIC EQUILIBRIUM

The international, as distinct from the national, aspects of the greatly increased indebtedness which weighed upon the post-war world present a series of problems which demand further consideration. The difficulties that arose in transferring from one national economy to another the payments due on account of foreign debt cannot be considered wholly apart from the distributive conflict referred to in the preceding section ; but they are sufficiently serious in themselves to warrant careful examination. It may well happen, for example, that the main representatives of creditors in an important lending country may be in sharp conflict with other important groups whose interests lie in the stimulation of domestic trade and its protection from imports. Different classes of creditors, particularly those to whom public debts and private commercial debts respectively are owed, may also be in conflict concerning priorities of claims. In such circumstances, when group interests conflict within a country, it becomes difficult to estimate the national interest as a whole or to determine national policy. No attempt is made here, however, to make an estimate of these situations, other than to point out certain elementary and generally agreed conclusions concerning the effects of such conflicts of group interests, and the policies resulting from them, upon the conduct of international economic relations in general.

The main consideration to be borne in mind is that put forward in the previous *Survey* where attention was drawn to the predominantly national organisation of economic production and trade as distinct from the more international and even cosmopolitan organisation of finance. It is argued that modern economic problems must be considered neither as purely national nor as cosmopolitan, but as arising in a series of national economies which are in shifting equilibrium one with another. The maintenance of international equilibrium through the interaction of national price-systems (including such important prices as wages and interest-rates) was reasonably effective in the pre-war period when the gold standard provided a common measure of value. The dominance of the London money market enabled it to act as a reservoir and distributing centre of credit, while under a free-trade policy the English market served as an *entrepot* for international commerce. The relative flexibility of the economic system facilitated the necessary adjustments of national price systems. In this period, great changes took place in the economic organisation of the world, and, in particular, large amounts of capital were transferred from the older industrial countries to open up and develop first the interior plains of North America and later the South American agricultural countries, the British dominions in the southern hemisphere, and certain Far-Eastern countries. The magnitude of the price changes and therefore of the rearrangement of production caused, for example, by the opening up of the American wheat lands, the introduction of refrigeration, the development of the South African goldfields, and the rapid rise of Japan as an industrial Power, was half-concealed by the smoothness with which international equilibrium was adjusted through the operation of the pre-war gold standard.

In the post-war period a great many complicating factors were introduced. Among them must be reckoned the rapid expansion of international indebtedness, the effective discharge of which demanded, not only an augmented volume of international commodity trade, but considerable shifts in the relations between national price systems. There arose, however, very great difficulties in adapting either national price levels or national economic organisation to the changed structure of international finance. Balance of payments could not easily be changed from passive to active in the case of debtor countries, or from active to passive in the case of countries whose creditor position had created the necessity of receiving an increased volume of imports in discharge of debt. Such transformations would have required very radical changes in national economic organisation at a time when such organisation was less flexible than it had been before the war.

The true difficulties of this situation were not revealed while a large number of the currencies, particularly of debtor countries, remained independent, exchanges fluctuated and inter-governmental debt payments were not settled. As one currency after another returned to the gold standard and exchange parities once more became fixed, while successive debt settlements were arranged, the strain upon the newly restored mechanism for maintaining international financial equilibrium became greater. For a few years between 1925 and 1929 the payment of international financial obligations was rendered possible without drastic rearrangement of national economies by the free flow of new capital exports, largely from the United States, to the debtor countries. When this export of capital began to fail in 1928-29, the pressure on the balances of payments of the debtor countries depressed prices, the credit expansion broke and the strain of international adjustment finally caused the collapse of the international monetary mechanism.

When this development occurred, the full complexity of the problems involved in the maintenance of international economic and financial equilibrium were revealed by the variety of forces which it was necessary to consider in any proposals once more to stabilise the exchange ratios between different currencies. Not only technical monetary problems, such as the use of gold in the monetary systems, credit policies, reserve ratios and interest rates, but more general economic considerations, such as the effect of different exchange ratios upon export industries, as well as upon domestic price levels, and therefore upon wages and production costs, became a matter of serious concern.

In face of such complicated problems, there was a general retreat from international economic co-operation, and measures of national economic defence were hurriedly improvised to protect national industries and standards from international competition. The aggregate effect of these measures was still further to restrict economic activity and depress prices, particularly in those commodities exchanged between national economic systems, so that the discharge of international financial obligations became still more difficult. The volume of international debt obligations, which was too great for international trade to carry except when lending was pursued as freely as it was between 1925 and 1929, was still more difficult to discharge in 1932, when lending had virtually ceased and international trade had fallen to little more than one-third of its value in 1929.

It was not long, therefore, before exceptional measures had to be taken to deal with the debt service, which could no longer be met either by the export of goods or by the contraction of new loans. The moratorium proposed by President Hoover in June, 1930 for the suspension of intergovernmental debt and reparation payments for one year was only the beginning of a long series of measures, which were quickly extended to private as well as public international debts. The remainder of this chapter gives in broad outline a summary of the principal measures adopted ; but it is being written *in medias res* before any general or permanent solutions have been found and while temporary arrangements in particularly acute cases are all that can be recorded.—(*World Economic Survey 1932-33*).

A bulletin issued by the Indian Branch of the International Labour Office discusses the World unemployment situation as under:—

For the first time since the beginning of the economic depression, the quarterly unemployment statistics published by the International Labour Office at the beginning of last July showed an improvement in the situation. The figures now published, relating to the months of July, August and September 1933, indicate that the improvement noticed three months ago has been maintained and that unemployment has continued to decrease in most of the countries for which statistics are available. A comparison of the present situation with the situation a year ago, which eliminates seasonal movements, indicates that there has been a substantial diminution in the number of unemployed recorded, particularly in Australia, Belgium, Canada, Chile, Denmark, France, Gemany, Great Britain, Ireland, Italy, Portugal and Roumania.

The index number of employment for the United States, shows for the month of July that a considerable improvement has taken place in that country and this seems to have been accentuated since then.

On the other hand, unemployment has increased during the summer of 1933, as compared with the summer of 1932 in Austria, Bulgaria, Czechoslovakia and Yugoslavia.

For certain countries such as the Netherlands, Sweden and Switzerland, for which ... several series of statistics have been compiled on different bases, the available figure indi-

Topical Extracts:

cate contradictory tendencies. In France, the employment statistics apparently give the lie to the improvement revealed by the unemployment statistics.

A comparison of the most recent figures, not only with those of a year ago but also with those of three months ago, which, taking into account situation, indicates that even in the majority of the countries where unemployment has increased as compared with 1932, there has been an improvement during the summer of 1933. This is the case with Austria, Czechoslovakia, Netherlands, Sweden and Switzerland.

In reading these figures it should, of course, be borne in mind that comparisons between the figures of different countries are usually misleading because the basis on which unemployment statistics are compiled differs greatly from country to country.

It is equally important to note that even figures for a given country may not always be comparable at different dates as legislative and administrative changes, or the failure of unemployed persons who have exhausted the right to benefit to register at the exchanges may cause a decrease in the unemployment figure which does not represent a corresponding decrease in the volume of unemployment. This has been the case at certain times for instance in Great Britain, and Poland, and would appear to account for a part of the decrease shown in the Belgian and German figures below. It should also be remembered that the published figures as a rule take no account of *short-time*.

The following figures, taken from different sources,—compulsory unemployment insurance, voluntary unemployment insurance, trade union returns, employment exchanges, etc.—should be read in the light of the above reservations.

COMPULSORY UNEMPLOYMENT INSURANCE STATISTICS.

Austria.—291,224 unemployed (23.3 per cent.) in September, 1933, as compared with 269,179 (21.5 per cent.) in September, 1932.

Great Britain and Northern Ireland.—2,458,744 unemployed (wholly and partially) 19.2 per cent.) in September, 1933, as compared with 2,946,808 (23 per cent.) in September, 1932.

Germany.—4,127,584 unemployed (22 per cent.) in September, 1933, as compared with 5,223,810 (28.6 per cent.) in September, 1932.

VOLUNTARY UNEMPLOYMENT INSURANCE STATISTICS

Belgium.—142,119 unemployed (13.7 per cent.) in August, 1933, as compared with 169,411 (16.9 per cent.) in August, 1932.

Czechoslovakia.—226,843 unemployed (15.1 per cent.) in August, 1933, as compared with 167,529 (12.2 per cent.) in August, 1932.

Denmark.—73,334 (21.8 per cent.) in September, 1933, as compared with 92,451 (29.1 per cent.) in September, 1932.

Netherlands.—140,598 unemployed (27 per cent.) in September, 1933, as compared with 159,035 (30.6 per cent.) in September, 1932.

Switzerland.—76,700 unemployed (wholly and partially) (15.3 per cent.) in August, 1933, as compared with 89,700 (18.9 per cent.) In August, 1932.

TRADE UNION RETURNS.

Australia.—106,652 unemployed in July, 1933, as compared with 124,068 in July, 1932.

Canada.—32,000 unemployed in August, 1933, as compared with 38,240 in August, 1932.

Sweden.—81,914 unemployed in August, 1933, as compared with 75,622 in August, 1932.

EMPLOYMENT EXCHANGE STATISTICS AND SIMILAR ESTIMATES.

Bulgaria.—23,247 unemployed in August, 1933, as compared with 13,795 in August, 1932.

Chile.—66,865 unemployed in June, 1933, as compared with 97,595 in June, 1932.

Czechoslovakia.—621,600 unemployed in September, 1933, as compared with 460,952 in September, 1932.

Danzig.—26,400 unemployed in September, 1933, as compared with 28,989 in September, 1932.

Estonia.—1,568 unemployed in August, 1933, as compared with 2,002 in August, 1932.

Finland.—19,660 unemployed in August, 1933, as compared with 23,189 in August, 1932.

France.—265,902 unemployed in September, 1933, as compared with 298,479 in September, 1932.

Hungary.—52,351 unemployed in August, 1933, as compared with 56,985 in August, 1932.

Irish Free State.—55,590 unemployed in September, 1933, as compared with 75,140 in September, 1932.

Italy.—824,195 unemployed in August, 1933, as compared with 931,291 in August, 1932.

Latvia.—3,690 unemployed in August, 1933, as compared with 7,181 in August, 1932.

Netherlands.—300,652 unemployed in August, 1933, as compared with 254,462 in August, 1932.

New Zealand.—57,169 unemployed in August, 1933, as compared with 55,203 in August, 1932.

Norway.—32,848 unemployed in September, 1933, as compared with 30,963 in September, 1932.

Poland.—215,017 unemployed in August, 1933, as compared with 218,059 in August, 1932.

Portugal.—27,940 unemployed in July, 1933, as compared with 42,666 in July, 1932.

Rumania.—24,685 unemployed in July, 1933, as compared with 33,679 in July, 1932.

Saar.—34,840 unemployed in September, 1933, as compared with 38,858 in September, 1932.

Sweden.—108,769 unemployed in September, 1933, as compared with 74,496 in September, 1932.

Switzerland.—50,207 unemployed in September, 1933, as compared with 47,064 in September, 1932.

Yugoslavia.—11,710 unemployed in August, 1933, as compared with 9,940 in August, 1932.

STATISTICAL INFORMATION

CALCUTTA.

The improvement during August in the overseas import trade of Calcutta in private merchandise was not maintained in September, 1933, the value receding from Rs. 3.21 crores to Rs. 2.25 crores against Rs. 3.08 crores in September, 1932. Exports also declined from Rs. 5.95 crores to Rs. 5.71 crores against Rs. 5.87 crores in September, 1932.

IMPORTS

A comparison of the values of the principal imports with the figures for September, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Machinery and millwork	44 (+15)
Cotton goods	26 (−50)
Oils, mineral	16 (−2)
Iron or steel	13 (level)
Wool	10 (−4)
Other metals	9 (−1)
Chemicals and chemical preparations (excluding chemical manures and medicine)	7 (level)
Hardware	6 (−2)
Drugs and medicines	6 (+2)
Paper and pasteboard	5 (−1)
Electrical instruments	5 (−2)
Betelnuts	5 (−2)
Liquors	3 (−2)
Sugar	1 (−14)
Tobacco	1 (−7)

The heavy rise in machinery and millwork was again chiefly due to large imports of sugar machinery mostly from the United Kingdom. The total yardage of cotton piece goods shrank from 38 million yards to 11 million yards and the value fell from Rs. 58 lakhs to Rs. 17 lakhs. The leavy fall under cotton goods was chiefly due to lesser imports of grey and coloured, printed or dyed goods. The marked fall under sugar was chiefly due to lesser imports of refined sugar of 28 D. S. and above. Poorer imports of unmanufactured leaf accounted for the drop in value under tobacco. There was no importation of wheat.

EXPORTS

The variations in the values of the principal exports as compared with the trade for September, 1932, are indicated below:—

	In lakhs of rupees.
Jute manufactures	215 (−24)
Tea	161 (+4)
Jute, raw	69 (−16)
Seeds (non-essential)	28 (+22)
Hides and skins	21 (level)
Grain, pulse and flour	10 (−9)
Lac	9 (−1)
Pig iron	7 (+2)
Coal	4 (+2)

Direction of Exports

Raw Jute hides were largely shipped to Germany. The United Kingdom was the chief buyer of tea and manganese ore and Japan of pig iron. Gunny cloth, lac and skins went mostly to the United States of America, gunny bags were largely shipped to the Commonwealth of Australia and rice which formed the bulk of the trade under the head "grain, pulse and flour" was chiefly shipped to Mauritius.

INDIA'S OVERSEAS TRADE

The following monthly figures of Indian Overseas Trade have been received from the Director-General of Commercial Intelligence and Statistics, Calcutta, for the month of September, 1933:—

The total imports of private merchandise amounted to Rs. 8,75,00,000. The total exports of private merchandise to Rs. 11,65,00,000.

The net movement of treasure exports aggregated Rs. 5,68,00,000.

The total visible balance of trade, merchandise and treasure in favour of India was Rs. 8,60,00,000. (Excluding goods such as railway materials for State Railways under co-mpany management, which are not paid for in the ordinary way and cannot be taken into account in the balance of trade).

The balance of remittances of funds adverse to India was Rs. 1,06,00,000.

MADRAS

The total value of imports from foreign countries into the Madras Presidency during September, 1933, was Rs. 1,13,28,839 against Rs. 1,46,07,711 in the corresponding period of the previous year showing a deficit of Rs. 32,78,872. The commodities that were responsible for the deficit were:—Machinery and mill work Rs. 11,397 (−Rs. 2,10,616); petroleum dangerous flashing below 76 degrees F.−891, 537 gallons (−Rs. 5,26,128); seeds 1,206 tons, Rs. 1,59,562 (−1,269 tons, −Rs. 3,05,660); piece-goods, plain and bordered grey (unbleached) 1,486,757 yards, Rs. 2,47,586 (−2,490,671 yards, −Rs 4,09,140); piecegoods, white beashed 2,801,653 yards, Rs. 6,08,151 (−1,423,089 yds., Rs. 2,97,647); piecegoods printed, dyed and woven, coloured 1,124,090 yds. Rs. 2,49,882 (−944,778 yds., −Rs. 2,07,276); silk, Rs. 3,18,084 (−Rs. 2,04,348); artificial silk Rs. 1,46,886 (−3,17,559); other articles Rs. 85,38,192; other articles Rs. 85,38,192 (−Rs. 14,45,798).

The total value of exports of principlal articles to foreign countries from the Madras Presidency during September, 1933, was Rs. 1,92,39,919 against Rs. 1,72,57,488 in the corresponding period of the previous year showing an increase of Rs. 19,82,431. The principal commodities that contributed to the increase were: coir manufactured (excluding rope) 4,170 tons. Rs. 1,232,961 (+1,495 tons, Rs. 6,21,605): fruits and vegetables, dried, salted or preserved 476 tons., Rs. 4,50,735 (+298 tons, +Rs. 2,76,284); cow hides 924 tons, Rs. 17,53,600 (+267 tons, +Rs. 7,10,683); groundnuts, 24,145 tons, Rs. 30,48449 (+10,577 tons, +Rs. 7,75,996); linseed, 2,160 tons, Rs. 2,45,774 (+2,160 tons, +Rs. 2,45,774); tea, black, 4,716,613 lb., Rs. 43,50,106 (+285,116 lb., +Rs. 4,54,346); other articles Rs. 1,92,39,919 (+Rs. 19,82,431).

PORT OKHA

The total import of merchandise at Port Okha during September, 1933, amounted to 8,568 tons valued Rs. 3,27,672 consisting of 79 tons steel joists valued Rs. 8,813, 25 tons G. P. sheets valued Rs. 4,796, 159 tons bleaching powder valued Rs. 14,403, 7,991 tons coal valued Rs. 1,43,838 and machinery, etc. Rs. 1,55,822. The total export during the same period amounted to 2,095 tons consisting of 980 tons cement. 1,065 tons seeds, 100 tons magnesium, etc. The number of vessels that entered the Port was 5.

The total import during the corresponding period amounted to 2,278 tons valued Rs. 3,70,581 consisting of 5 tons sugar valued Rs. 910, 11 tons G. C. sheets valued Rs. 3,084 and machinery, etc. valued Rs. 3,66,587. The total export during the same period amounted to 1,150 tons consisting of 1,050 tons cement and 100 tons seeds. The number of vessels that entered the Port was 5.

ADVANCE OF TRADE IN U. K.

The advance of United Kingdom trade, which for some time past has manifested itself in a number of industries, seems to have taken on the character of a general and progressive improvement. While anything in the nature of a trade boom is neither anticipated nor desirable, the business graph in practically all branches has moved steadily in an upward curve (writes *Commercial Bulletin* for September.)

The July trade returns show improvement over those of the previous month, for imports are well maintained at £53.7 millions against £53.8 millions in June, whilst exports of British goods have increased from £28.5 millions to £29.8 millions. The July returns also record an improvement over those of July last year, this being particularly striking in the case of re-exports. Another encouraging feature is the rise in raw material imports of £14.9 millions against £14 millions in June, and only £10.8 millions in July of last year. Coal and iron and steel exports have held their own, and there have been noticeable improvements in exports from the woollen, linen and leather trades, and in those of railway material, locomotives and motor cars.

In the 12 months ending 24th July, there has been an increase of 549,000 in the total of insured persons at work, the total being approximately 9,800,000. This was 8,000 more than in the previous month.

In spite of the holiday season the recent improvement in employment was continued in the following industries, manufactures and services:—iron and steel, engineering, ship-building and repairing, shipping, docks and harbours, metal goods, woollen, worsted and hosiery industries.

General reports show that in South, Wales the export of anthracite and steam coals has expanded, while the production of steel in one year has risen from 101,300 to 153,000 tons. In Leicester the centre of the hosiery trade, business is said to be brisk, unemployment decreasing and prices rising. In the Northampton boot trade unemployment has fallen in 7 months from 6,000 to less than 700, and some of the factories are working 24 hours a day. Sheffield, which during the war employed an additional population of 40,000 workers to cope with the demand for war material, has found employment for three-quarters of these workers in its own industries.

Motor car manufacturers are doing excellent business, one firm reporting 22 per cent. increase in production since June, 1932, while another has beaten its own record of last year when it was unable to deliver all the cars on order. Spain furnishes the latest evidence of the ascendancy attained by United Kingdom motor car manufacturers in overseas markets. In 1931 Spain imported from the United Kingdom a total of 97 private cars to the value of £11,296. In 1932 the total was 955 cars valued at £120,876, and in the first five months of this year 1,173 cars to the value of £145,999 were exported to that country.

COMPANY REPORTS

ANGLO-INDIA JUTE MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	76,82,900	Block (net) ...	1,16,63,973
Reserves ...	1,29,50,000	Jute ...	48,17,163
Debts ...	11,30,770	Cloth & Bags ...	2,56,920
Profit & Loss ...	6,44,294	Stores ...	1,83,967
		Outstandings ...	8,74,561
		Cash & Invests.	46,11,380
Total ...	2,24,07,964	Total ...	2,24,07,964

Extracts from Directors' Report:

Report.—For the half-year ended 30th September, 1933.

These show a profit on Revenue Account of Rs. 5,28,552-13-10. On transfer of this to Profit and Loss there is a balance at credit of that Account of Rs. 6,44,294-1-3, which we recommend should be dealt with as follows:—

To payment of dividends, free of Income Tax:—On Preference Shares at the rate of 7 per cent. per annum (Rs. 3-8-0 per share) Rs. 96,677, on Ordinary Shares at the rate of 20 per cent. per annum)Rs. 10 per share) Rs. 4,92,070, total Rs. 5,88,747, leaving a balance of Rs. 55,547-1-3 to be carried forward.

The Company's Mills continue on Single Shift and in acordance with Indian Jute Mills Association's Agreements are working 40 hours per week with 15 per cent. of the total looms closed off the Hessian side.—J. C. D. Naismith, C. E. W. Price, Thos. Douglas, Directors.

KHARDAH CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	45,00,000	Block (net) ...	31,51,447

Total ...	1,09,15,825	Total ...	1,09,15,825

Extracts from Directors' Report:

Report—For the half-year ending 30th September, 1933.

The Revenue Account, after deduction of Insurance, Commission to Staff, etc., shows a profit of Rs. 3,13,195-12-7, adding the amount carried forward from last half-year Rs. 3,531-10-8, amount transferred from Reserve Fund Account Rs. 1,30,000, equal Rs. 1,33,531-10-8, the total is Rs. 4,46,727-7-3. From this sum there has to be deducted:—Provision for Income Tax and Super Tax Rs. 55,000, amount written off Furniture Rs. 2,834, total Rs. 57,834. Leaving an available balance of Rs. 3,88,893-7-3, which we recommend should be dealt with as follows.—For payment of the Dividend for the half-year on the Preference Shares at the rate of 6 per cent. per annum, free of Income Tax Rs. 27,000, for payment of a Dividend for the half-year on the Ordinary Shares of Rs. 10 per share, free of Income Tax, Rs. 3,60,000, to be carried forward Rs. 1,893-7-3, total Rs. 3,88,893-7-3.—Anderson, Wright & Co., Managing Agents.

WESTERN COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	2,00,000	Block (net) ...	1,59,013
Debts ...	9,659	Stores ...	2,031
		Outstandings ...	8,480
		Cash & Deposits ...	16,406
		Profit & Loss ...	23,729
Total ...	2,09,659	Total ...	2,09,659

Extracts from Director's Report:

Report—For the half-year ended 31st August, 1933.

Revenue Account shows a profit of Rs. 2,461-9-11 which on being transferred to Profit and Loss Account leaves a debit balance of Rs. 23,728-9-1 to be carried forward.

The continued depression in the industry has not permitted of the full benefit being derived from the sublease entered into at the end of 1931.—J. H. S. Richardson, David Ezra, O. M. Jatia, Directors.

KALAPAHARI COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,50,000	Block (net) ...	58,325
Reserve ...	2,00,000	Coal ...	2,025
Debts ...	36,249	Stores ...	7,218
Profit & Loss ...	12,996	Outstandings ...	33,199
		Cash & Invests. ...	4,98,478
Total ...	5,99,245	Total ...	5,99,245

Extracts from Directors' Report:

Report—For the half-year ended 31st August, 1933.

After transferring Rs. 12,000 from Reserve and providing Rs. 2,375 for Depreciation there is a balance of Rs. 12,995-14-9 at the credit of Profit and Loss Account from which they recommend:—Dividend of 4 annas per Share Rs. 8,750, carry forward Rs. 4,245-14-9.

Raisings were the same as those of the proceeding half-year but despatches were fewer and lower selling prices were realised.

Maharaja Siris Chandra Nandy, being absent from Calcutta, has not signed the Report or Accounts.— J. H. S. Richardson, Onkar Muli Jatia, Directors.

DEOLI COAL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,50,000	Block (net) ...	2,32,500
Reserve ...	80,000	Coal ...	19,168
Debts ...	53,757	Stores ...	1,037
		Outstandings ...	33,545
		Cash & Invests. ...	2,75,980
		Profit & Loss ...	21,577
Total ...	5,83,757	Total ...	5,83,757

Extracts from Directors' Report:

Report—For the half-year ended 31st August, 1933.

Revenue Account shows a loss of Rs. 15,579-4-4 for the half-year which on being transferred to Profit and Loss Account leaves a debit balance of Rs. 21,576-10-4 to be carried forward.

Raisings and Despatches were lower than in the preceding half-year and the average selling price has again fallen considerably.—J. H. S. Richardson, O. M. Jatia, Devid Ezra, Directors.

BARSI LIGHT RAILWAY CO., LD.

The net profit for the year ended 31st March, amounted to £35,839 (against £36,239 for 1931-32). A credit balance of £10,220 was brought in from the previous accounts, and the Directors have withdrawn £2,000 from taxation reserve and £5,000 from general reserve, so that £53,059 is available for distribution. The Preference dividend requires £2,464, and the dividend of 6 per cent. recommended on the Ordinary shares (including the interim distribution of 2½ per cent.) will absorb £43,326, leaving £7,269 to be carried forward. The Ordinary dividend for 1931-32 was also 6 per cent. A resolution will be submitted to the meeting, which is convened for 10th October, converting the Company's shares into stock.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,00,000	Block (net) ...	3,50,280
Debts ...	1,68,595	Goodwill ...	5,000
		Work-in-progress ...	29,450
		Stores ...	99,961
		Outstandings ...	1,14,233
		Cash & Deposits ...	6,746
		Profit & Loss ...	62,925
Total ...	6,68,595	Total ...	6,68,595

Extracts from Directors' Report:

Report.—For the half-year ended 30th June, 1933, shows a profit on Revenue Account of Rs. 16,061-12. After writing off As. 15,964-0-2 for Depreciation of Block, there remains a balance of Rs. 62,924-8-2 at the debit of Profit and Loss Account, which it is proposed to carry forward.

During the half-year we are glad to report a definite improvement in general business which is reflected in the turnover, and we are hopeful that this progress will continue, especially in view of the fact that we have now established the manufacture of our own fans, designed and completely fabricated in the Works. We are confident that these will find a ready and remunerative market.—Balmer, Lawrie & Co., Managing Agents.

CHAMPDANY JUTE CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	59,16,400	Block (net) ...	69,81,428
Reserve ...	84,42,529	Jute & Gunnies	28,74,781
Debts ...	7,48,568	Stores & Spares	2,49,154
Profit & Loss ...	2,09,844	Jute in Transit ...	2,06,773
		Outstandings ...	4,95,879
		Cash ...	2,82,105
		Investments ...	42,27,221
Total ...	1,53,17,341	Total ...	1,53,17,341

Extracts from Directors' Report:

Report—The Directors beg to submit herewith the Audited Accounts of the Company for the half-year ended 30th Sept., 1933, showing after allowing Rs. 1,51,485-14-5 for Depreciation on Block, a profit for the half-year of Rs. 1,65,385-13-6, add balance brought forward from last half-year Rs. 44,457-13, or an amount available of Rs. 2,09,843-10-6, which they recommend should be dealt with as follows:—Payment of Dividend of Rs. 3 per share Rs. 1,77,492, leaving a balance to be carried forward of Rs. 32,351-10-6.

Buildings and Machinery.—There are no additions under these heads.

Working Hours.—In common with other Mills in the Indian Jute Mills Association, Champdany and Wellington have worked 40 hours per week during the period under review and 15 per cent. of the total complement of looms also remained sealed.

Directors.—Owing to Mr. Mokandlall's absence from Calcutta he has not signed the Report and Accounts.—J. Reid Kay, W. M. Craddock, R. L. Manners, Directors. James Finlay & Co., Ltd., Managing Agents.

THE SOUTH INDIA CO-OPERATIVE BANK RAMKRISHNAPUR

The South India Co-operative Bank has been in existence for the past five years and the fifth annual meeting of its members and shareholders was held on 4th June, 1933 when the report of the Committee of Management was submitted for approval. The Bank has been making rapid progress all these five years. During the year under review the increase in the number of members, the increase in the share capital from Rs. 6790 to Rs. 7665 showing an increase of Rs. 875 and the total deposits standing at Rs. 109801-8-4 as against Rs. 88245-12-5 in the previous years showing thereby an increase of Rs. 21,555-11-11, all go to reveal the amount of confidence the Bank is gaining day by day. The number of loans granted was 188 amounting to Rs. 37,031-4-6 and the repayments were Rs. 26,807-11. The net profit for the year is Rs. 366-12-6 which together with Rs. 315-11, the net profit brought forward from the last year, makes up a total of Rs. 682-7-6. Besides these, the Bank possesses a Reserve and Sinking Fund to the extent of Rs. 1,270. It is understood that the management of the Bank is proposing to invest in lands and buildings with the double purpose of securing better return on capital and answering the special needs of the community which forms its clientele.

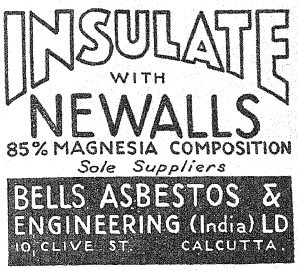
INDUSTRIES SUPPLEMENT



BENGAL AND THE SUGAR INDUSTRY

Though the industrial backwardness of Bengal is a subject of constant reference and discussion in this province, and though there is an evident desire on the part of prominent people to remove the reproach, there is yet no sign of Bengal trying to secure for herself her proper share of the vast benefits of protection granted to the sugar industry. It should be obvious that it is easier for an industrially new province to step into this field than in any other that is open to India in the present circumstances. In the case of other industries, either India as a whole, has formidable handicaps to overcome, or the backward provinces have to encounter the competition of more firmly established rivals in other parts of the country. In cotton, for instance, Bombay and Ahemedabad have far outstripped the rest of India; and while the difficulties of the bigger industrial centres have given an advantage to South India and the upcountry parts of Northern India to establish cotton mills on a more favourable basis, though, on somewhat modest lines, Bengal has not been able to make much headway. To increase the cotton mills of India when the world, as a whole, is suffering from a surfeit of cotton mills, and the Indian market is the theatre of a triangular warfare between India, Lancashire and Japan, is obviously an unwise and risky enterprise. So is the case with iron and steel. The problems of the iron and steel Industry are far from being solved and the existing concerns, by no means small in size or lacking in advantage of experience, are still under the necessity of procuring adventitious aids of protection from the State.

The case of sugar is quite different. The amount of protection granted to the sugar industry allows a big margin for the inevitable errors of initial experiment. It is on the strength of the present duty and the surcharge which, together work out to Rs. 6-10-6 per maund that the sugar industry has had the large expansion witnessed in recent years. It might be said that, though the protection of the Indian sugar industry is large, it is of little help for small concerns within the country to stand the competition of properly organised indigenous concerns. Of these, we have had somewhat too many in these years; and one has to consider the kind of warning, that was raised sometime ago by the Sugar Technologist and by some of the commercial organisations, that the rate of expansion in the sugar industry has been too fast and that there is the danger of production outstripping the internal demand. We have in previous issues of this *Supplement* examined this contention at length; and here it should suffice to reiterate our view that the argument about the expansion of the industry has been overdone, partly out of motives that are not unselfish, and partly, out of the unreasonable pessimism as to the volume of cosumptive demand in the future. So far as Bengal is concerned, it is a matter of no small significance that together with Assam, she forms the biggest sugar consuming area in the whole of India. Even if we attribute to this province no more than the average consumption of six pounds per head in India, she may be supposed with a population of five crores of people to consume seventy-five lakhs of maunds. Is is clearly anomalous that a province who with such teeming millions has no more role to play in the sugar trade than a mere passive consumer of the production of neighbouring provinces.

Before we proceed to examine in detail the preferential advantages, which Bengal enjoys over other provinces in respect of the sugar manufacture, it would be well to emphasise other considerations which must impel prominent industrialists in Bengal to co-operate towards the early establishment of the sugar industry. It is a commonplace of current economic discussions that Bengal has been more hard-hit by the prevalent depression than most other provinces of India, The reason for this is easily found in the condition of the jute trade and the jute mill industry. Though jute, doubtless, offers scope for improvement and reorganisation and though there can be little doubt that with such improvement and reorganisation the jute trade will yield more to the people of this province than it has done in recent years, it cannot be questioned that the stage has arrived, when Bengal should explore the possibility of relieving her excessive dependence on the golden fibre for her plenitude and prosperity. In all the proposals for restriction of jute acreage the desirability of alternating crops has been insisted upon. The sponsors of this proposal have invariably taken for granted that the average cultivator has only to be told about the dangers of successively heavy jute crops to be persuaded to restrict the acreage and that the restriction of jute would set his mind working in the direction of finding a substitute. Sugar, it must be said, offers an escape from this helpless optimism. But we ask: how could the cultivator be persuaded to raise sugar in the lands released from jute if he cannot see a manifest demand for his sugarcane? The sight of a few sugar mills in this province would be far more effective propaganda for the restriction of jute and the sowing of sugar, than all the tracts, which the Director of Agriculture can distribute over the whole of the province. It may be said, therefore, that the estabilishment of sugar mills in Bengal would serve the double purpose of enabling this province to take its share in the growing sugar industry and to restore the strength of the staple industry, which has been responsible for her prosperity in the past.

We might also urge considerations other than economic in support of our contention. The over-development of the cotton industry in the Western Presidency has, during recent years brought about

complications in our political and inter-provincial life which it is up to us to try to avoid in the future. The question of protection for the cotton mill industry has, by reason of the pre-dominant interests of Bombay therein, come to be discussed with a somewhat provincial bias. This danger has gradually spread to other spheres; and it is certain that if this tendency is not countered early and effectively, our political life in the future might become poisoned. Our experience of the cotton mill industry, therefore, suggests that every effort should be made to avoid what we may call a lop-sided development of the sugar industry in certain particular parts of India. That such lop-sided developments might bring about the same dangers as have appeared in the case of the cotton industry, was seen in the Sugar Conference held at Simla. Both in the demand for a check to the establishment of more mills and in the demand for zoning Bengal's interest appeared in a light which it is not pleasant to contemplate. If inter-provincial jealousies resulting from lop-sided industrial developments were allowed to be on the increase, it would not be too much to suggest that even the prospects of Federation in the future would be endangered thereby.

While we desire to present what we have called the non-economical considerations, we should not be misunderstood as suggesting that the economic considerations are less sound or less weighty. So far as the cultivation of sugarcane is concerned, it has has been for a long time the definite opinion of the Department of Agriculture that the soil and climate of this province are favourable for the cultivation of sugarcane. The departmental varieties of cane grown from the alluvial soils in Bengal are less inferior than those similar to that grown anywhere in India. And if anything, they are superior.

Besides, the sugar that is imported into Bengal from other provinces has to bear a freight of annas twelve to a rupee per md. If a sugar factory is started in Bengal it will be able to realise for its production at least eight annas per md., more than the selling price of the sugar-mills of other provinces. Another advantage that a sugar mill in Bengal will have, will be about the disposal of molasses. In Behar at present molasses does not fetch any price; but a fairly good price can be obtained in Bengal. Sugar-cane is grown in large quantities in some parts of Bengal. If sugar mills are started there will be no difficulty in obtaining sufficient supplies of sugarcane as the cultivators will be too glad to sow a sugarcan crop which at the present price of all other crops is the best paying crop for the agriculturists. It will therefore be seen that conditions are highly favourable for starting a sugar mill in Bengal.

In the space available we shall endeavour to present in the form usually adopted in a company prospectus, the outlay, costs and profits of a Sugar mill the size of which might well be the vogue for Bengal.

The erection of a 400 tons sugar-cane crushing capacity mill is estimated to cost about 9 lacs of rupees. The principal items are given below :—

Cost of machinery	£.35,000/-			
Duty	£. 3,500/-			
	£.38,000/- roughly ...	Rs.	5,00,000	0 0
Landing charges	... ...		15,000	0 0
Inland freight	... ...		20,000	0 0
Mill building	... ...		1,00,000	0 0
Water tank	... ...		10,000	0 0
Workshop	... ...		20,000	0 0
Staff quarters	... ...		40,000	0 0
Cost of land	... ...		25,000	0 0
Salary of staff during period of erection			20,000	0 0
Railway siding and jetty			25,000	0 0
Sugar godowns	... ...		25,000	0 0
Weighbridge	... ...		5,000	0 0
Water cooling arrangements			8,000	0 0
Laboratory instruments	... ...		5,000	0 0
Erection tackle	... ...		20,000	0 0
Miscellaneous	... ...		62,000	0 0
	Total	Rs.	9,00,000	0 0

A sum of about two to three lacs will be necessary for working the concern. A capital of twelve lacs is therefore necessary for starting a 400 ton mill.

At the present cost of sugar-cane and the price of sugar in Bengal, taking a very conservative estimate the mill is expected to make a profit of at least six lacs of rupees which is arrived at as under :—

The average number of days for which a sugar factory can be worked is 150 days in each season. Although with efficient working and a better type of suar-cane a much better recovery is possible to be on the conservative side, the amount of the estimated profit may be based on a recovery of 8½% only. Besides, a factory designed to crush 400 tons of sugarcane can easily crush up to 600 tons if sufficient quantity of sugar-cane is available. We are, however, calculating the expected profit on the basis of a 500 tons daily crushing and a recovery of 8.5% sugar only.

500 tons × 150 days—75,000 tons or say roughly 21 lac maunds of sugar-cane will be required for the mill. Cost of sugar-cane @ 5 as a maund about ... ... Rs. 6,60,000/-

Cost of manufacture.

			,, 2,00,000
			8,60,000

The crushing of 21 lacs mds. of sugar-cane will on the basis of a 8.5% recovery yield about 1,78,000 mds. of sugar. The price at which the average quality of sugar at present can be sold in Bengal is about Rs. 9 per md. But even at Rs. 8-8-0 the production of the mill will fetch about 15 lacs of rupees. This will have a profit of about Rs. 6,50,000 on an investment of 12 lacs of rupees. This profit can be considerably increased, if the mill can be worked for more than 150 days, which is not difficult as the province of Bengal can produce a sufficient quantity of sugarcane. With efficient working and a better type of sugar-cane, the recovery can also be considerably increased. The Belapur Sugar mill under the Managing Agency of Messrs. W. H. Brady & Co., for

instance has, by sowing a better variety of sugar-cane on their estate, been able to get a recovery of as high as 11%. The silt soil of Bengal is eminently suitable for the growth of the best type of sugar-cane with high sucrose contents and therefore it will not be unreasonable to expect a better percentage of recovery than what is obtained by the Behar and U. P. Mills.

ESTABLISHMENT OF THE NEW POWER PLANT OF THE INDIAN COPPER CORPORATION LTD.

Erection of the new Stirling Water boiler plant and the new Turbo-Generating plant has been virtually completed—and it is anticipated that these will be put into commission on commercial load very shortly.

An interesting feature of the new Water Tube boiler installation is the Redler Elevator and Conveyor Equipment for conveying slack coal from the Raw Coal Hopper at ground level, to the Raw Coal Bunkers overhead in front of the boilers.

The principle upon which the Redler Elevator and Conveyor operates requires to be seen in operation to be believed as practicable in application.

Another interesting feature of this installation is that these two Stirling Water Tube Boilers, each capable of evaporating 25,000 lbs. of water per hour at normal rating are fired with pulverised coal on the Buell Direct Firing Unit System.

There are two firing Units installed, each capable of firing the two boilers and these are cross connected so that each Unit may be made to fire either or both boilers.

The Primary Air Supply is so arranged that hot gases may be drawn in any desired proportion through the pulveriser so as to give an adequate temperature in the Mill for drying purposes, when moist or wet coal is being pulverised, and coal containing considerable percentages of moisture can be pulverised and fired without difficulty.

The Secondary Air Supply is likewise preheated by being passed through cavity walls in the Combustion Chamber prior to entering the furnace via the Air Casing and Burner.

It is claimed that by this arrangement the utmost efficiency and heat conservation is obtained and this is supplemented further through the application of an Economiser of the latest and most efficient type on each boiler and an Induced Draft Fan which discharged the comparatively cool gases of combustion to atmosphere, via the self supporting steel chimney common to the two boilers.

This is the first Water Tube Boiler Plant equipped with Coal Pulverising & Burning Equipment in this country on the Buell System, and it is undoubtedly one of the finest and most up-to-date plants of its kind in India.

STEEL INDUSTRY—NEED FOR PROTECTION FOR FURTHER PERIOD

The memorandum prepared by the Tata Iron & Steel Company for submission to the Tariff Board seeks to prove that the hopes of the first Tariff Board did not materialise because "at no time have world conditions been so adverse as during the last three years." The cause for protection for a further period is to be found in such factors, and not in any lack of fulfilment, on the part of the Tatas, of what was expected of them. Its own record from that point of view is one of which the Company might be justifiably proud. The statements attached to the representation show "that it has already achieved reductions in the costs of production which are fully equivalent to those which in 1926 were expected to be achieved only in the complete year 1933-34; and that if the costs of the first half of the year 1933 are considered in relation to the relatively low actual production of that year, they represent a definite improvement on the expectations formed by the Board in its 1926 Enquiry."

We extract the following from the representation :

The period of the existing scheme of protection, beginning with 1st April 1927, has been one of extreme difficulty not only for the steel industry in India but for all industries throughout the world. Output has been reduced and prices have collapsed to such an extent that the world production of pig iron for the year ending 31st December 1932 was slightly less than half and of steel less than two-thirds of that of 1913. Prices have similarly fallen below the pre-war level. The same period has witnessed catastrophic fluctuations in currencies and the raising of tariff barriers until the United Kingdom, with the oldest established iron and steel industry in the world, was compelled to adopt a policy of substantial protection for its industry. Apart from these world-wide causes, this Company had to meet a strike of the first magnitude which put back its progress for a period of two years. As the Company hopes to show in the course of this representation, it has striven against all adverse factors to maintain its output, reduce costs and improve efficiency; and if it now claims that a further measure of protection is necessary to enable it to meet world competition under present conditions, it is only claiming what such older and better established industries of the world are enjoying now and without which it will be difficult for it to live in competition with them.

2. The Steel Company entered on the period of protection now about to expire with the determination to do everything within its power to achieve the results expected of it by the Tariff Board and to improve upon them so far as might be possible. It submits that the statements attached to this representation show that it has already achieved reductions in the costs of production which are fully equivalent to those which in 1926 were expected to be achieved only in the completed year 1933-34; and that if the costs of the first half of the year 1933 are considered in relation to the relatively low actual production of that year, they represent a definite improvement on the expectations formed by the Board in its 1926 Enquiry.

3. As the Board is aware, the three main factors governing the success of the scheme of protection are the costs of production, the volume of production and the prices at which the products can be sold. Of these, the first is to a substantial extent within the control of the Company and in this matter the Company has met the obligations which were laid upon it. The volume of production is not to any appreciable extent susceptible of control by the Company, provided that the Company can show, as in fact it can, that of each protected kind of steel it has produced the maximum quantity of which its plant was capable and which could be sold in India in the prevailing conditions of the market for steel. The main factor governing production is the demand of the market; this is not under the control of the Company. The failure of this demand to meet expectations is one of the main causes of the failure of the current protective scheme. The third factor, that the selling prices of steel, is almost entirely dependent on the prices at which imported steel is delivered at Indian ports; these prices are dependent on the conditions of world trade from time to time and are not subject to the influence of the Company. The fall of many of these prices to unprecedentedly low levels is an important factor in the failure of the current scheme of protection to the steel industry to achieve its aims.

4. Since the Enquiry of 1926 the world's steel industry has passed through drastic changes similar to those which have occurred in most other industries. In 1929 the world's output of steel reached a record high figure. Prices were only moderate and in no country were high profits earned on the manufacture of steel of ordinary qualities. The slump began at the end of 1929 and by 1932 was so severe that the world's output in that year was less than 40 per cent. of the output three years earlier. Prices also fell heavily, as will be shown later, and the United

The INDIA RUBBER GUTTA-PERCHA AND TELEGRAPH WORKS CO. LTD.
7 OLD COURT HOUSE STREET. CALCUTTA

Kingdom, the last major industrial country to adopt protection for the steel industry, found it necessary during 1932 to increase its protective duties.

5. It was laid down in no uncertain terms by the first Tariff Board, and repeated with equal emphasis by the second, that the protection afforded to the steel industry should be adequate not only to enable the Tata Iron and Steel Company to work at a profit but also to encourage other large steel-works to be established in India, so that the country may ultimately become self-supporting in the matter of iron and steel. Unfortunately, so confused has been the course of world trade during the past decade and so great and incalculable have been the changes in the factors affecting production, consumption, costs and prices, that the protection which has been granted during the last nine years has failed not only to lead to the establishment of new works but even to provide the desired measure of assistance to the industry as it already existed. This was mainly due to reasons which could not be foreseen by the Tariff Board, for at no time have world conditions been so adverse as during the last three years. It is largely due to the effect of these conditions that protection for a further period is absolutely necessary.

AMOUNT OF PROTECTION NECESSARY

95. In its Report on the Enquiry held in 1926, the Board gave its reasons (paragraph 95 of the Report) for recommending protection by means of import duties rather than by bounties. The Company anticipates that experience since 1926 and present circumstances will combine to lead the Board to recommend the same method of protection for the coming period. The Company's proposals in the following paragraphs will therefore assume that protection will be granted by import duties.

96. As the duties should be equal to the difference between the prices at which foreign steel can be landed at Indian ports without duty and the landed prices of such steel necessary to enable the Indian industry to obtain the fair selling prices, it will be convenient to set out the figures in tabular form side by side.

Table VII.

PRICES TO WHICH IMPORTED STEEL MUST BE BROUGHT.

	Prices of imported steel landed Indian ports without duty January to June, 1933.		Prices to which imported steel landed Indian ports must be brought by duties.	
	British. Rs. per ton.	Continental. Rs. per ton.	Tested. Rs. per ton.	Untested. Rs. per ton.
Rails.	112.5	...	102	...
Fishplates ...	151	...	132	...
Structural Sections ...	112.7	61.5	108.4	108.2
Bars	96.1	65.0	110.4	113.2
Plates	114.4	81.2	114.5	116.3
Billets	...	57.1	...	82
Sheet Bar	...	57.7	...	82
Black Sheets ...	119.4	95.7	143.2	142.0
Galvanized Sheets ...	140.9	142.2	...	185.1
Sleepers	...	86	...	102

97. It will be clear that the Company expects so to reduce its cost of making rails and fishplates that no duty is required so long as the price of imported rails remains as at present. Although this is probable it cannot be regarded as certain, and it is desirable to retain these two products in the category of protected articles in order to facilitate the measures which would be necessary if foreign prices fell substantially. The present protective duties are Rs. 16½ per ton on rails and Rs. 7½ or 12½ per cent. on fishplates, whereas duties at the rate of 15⅝ per cent. (the present uniform rate of revenue duty on non-protected forms of steel) would, when applied to the values shown, be Rs. 17½ and Rs. 23½ respectively. It is submitted that the duties be Rs. 17 and Rs. 23 per ton or the revenue duties current for the time being, whichever are the higher. The duty required on steel sleepers is Rs. 16 per ton. It is submitted that a protective duty at this rate be levied.

98. The duty required on billets is Rs. 24.9 and on sheetbar Rs. 24.3 per ton. The Company submits that a uniform protective duty of Rs. 25 per ton be levied on all those forms of steel usually known as "semis", namely blooms, billets, sheetbar and tinbar.

99. Consideration of the duties on sections, bars, plates and black sheets is complicated by the fact that the Company sells these products in two qualities, namely tested and untested, and that the competition comes essentially from two sources, the United Kingdom and the Continent, at very different price levels. In its report on the first Enquiry the Board recommended uniform duties based on the weighted averages of what would be required if each quality were considered separately. In the 1926 Report, however, the Board recommended a system of differential duties for the two qualities. It was found necessary in practice to base the differences on the sources of origin of the imported steels *i.e.*, British and non-British. A consideration of this question raises important issues of the tariff policy of the Government of India and the commercial relations between India and the United Kingdom. With questions of general policy the Company has no concern; but the adoption of protection by the United Kingdom and the conditions on which exemption from protective duties has been granted to the products of this industry entering the United Kingdom under the Ottawa agreement have rendered this question of direct interest to the Indian steel industry. The Company therefore considers that it will not be travelling beyond its legitimate sphere if it urges upon the Tariff Board to recommend to the Government of India that the adoption of a scheme of differential duties, if any, should be made conditional upon the continued exemption of the products of the Indian iron and steel industry from protective duties in the United Kingdom throughout the period of the protection of the Indian steel industry. In the succeeding paragraphs an attempt has been made to work out the duties both on a uniform and a differential basis for the guidance of the Tariff Board, without expressing any opinion on behalf of the Company regarding the best method of imposing the duties. If a system of differential duties is adopted the Company would prefer to see it made a condition of the admission of British steel at the lower rate of duty that the steel complies with a standard specification. Should this, however, be found to be administratively impracticable, the Company suggests that a declaration be required to the effect that the British steel for which entry is claimed at the lower rate of duty is not made by the Basic Bessemer process.

97. It will be clear that the Company expects so to reduce its cost of making rails and fishplates that no duty is required so long as the price of imported rails remains as at present. Although this is probable it cannot be regarded as certain, and it is desirable to retain these two products in the category of protected articles in order to facilitate the measures which would be necessary if foreign prices fell substantially. The present protective duties are Rs. 16¼ per ton on rails and Rs. 7½ or 12½ per cent. on fishplates, whereas duties at the rate of 15⅝ per cent. (the present uniform rate of revenue duty on non-protected forms of steel) would, when applied to the values shown, be Rs. 17½ and Rs. 23½ respectively. It is submitted that the duties be Rs. 17 and Rs. 23 per ton or the revenue duties current for the time being, whichever are the higher. The duty required on steel sleepers is Rs. 16 per ton. It is submitted that a protective duty at this rate be levied.

98. The duty required on billets is Rs. 24.9 and on sheetbar Rs. 24.3 per ton. The Company submits that a uniform protective duty of Rs. 25 per ton be levied on all those forms of steel usually known as "semis", namely blooms, billets, sheetbar and tinbar.

99. Consideration of the duties on sections, bars, plates and black sheets is complicated by the fact that the Company sells these products in two qualities, namely tested and untested, and that the competition comes essentially from two sources, the United Kingdom and the Continent, at very different price levels. In its report on the first Enquiry the Board recommended uniform duties based on the weighted averages of what would be required if each quality were considered separately. In the 1926 Report, however, the Board recommended a system of differential duties for the two qualities. It was found necessary in practice to base the differences on the sources of origin of the imported steels *i.e.*, British and non-British. A consideration of this question raises important issues of the tariff policy of the Government of India and the commercial relations between India and the United Kingdom. With questions of general policy the Company has no concern; but the adoption of protection by the United Kingdom and the conditions on which exemption from protective duties has been granted to the products of this industry entering the United Kingdom under the Ottawa agreement have rendered this question of direct interest to the Indian steel industry. The Company therefore considers that it will not be travelling beyond its legitimate sphere if it urges upon the Taric Board to recommend to the Government of India that the adoption of a scheme of differential duties, if any, should be made conditional upon the continued exemption of the products of the Indian iron and steel industry from protective duties in the United Kingdom throughout the period of the protection of the Indian steel industry. In the succeeding paragraphs an attempt has been made to work out the duties both on a uniform and a differential basis for the guidance of the Tariff Board, without expressing any opinion on behalf of the Company regarding the best method of imposing the duties. If a system of differential duties is adopted the Company would prefer to see it made a condition of the admission of British steel at the lower rate of duty that the steel complies with a standard specification. Should this, however, be found to be administratively impracticable, the Company suggests that a declaration be required to the effect that the British steel for which entry is claimed at the lower rate of duty is not made by the Basic Bessemer process.

THE LEYLAND & BIRMINGHAM RUBBER CO. (INDIA), LTD.
12, MISSION ROW, CALCUTTA
BELTING—PACKING—CENTRIFUGAL & MECHANICAL RUBBERS—
JOINTING—AND ALL RUBBER RUQUISITES FOR FACTORY USE

100. For the reason given in paragraph 97 of the Board's Report of 1926, the differential duties were so adjusted as to leave the duty-paid prices of untested steel Rs. 7 per ton lower than those of tested steel of the same kinds. In order to ensure that the Company's total receipts for each kind of steel should be as anticipated, this adjustment must be weighted in accordance with the proportions of the two qualities which the Company is expected to be able to sell. This weighting and also that required for the system of uniform duties, if this alternative be adopted, are based on the proportions of tested and untested steel sold in 1932-33.

101. The following table sets out the duties required on the materials referred to in paragraph 99 according to each of the above methods, the figures being rounded off to the nearest whole rupee.

Table VII.

DUTIES REQUIRED.

	Uniform.	Differential.	
	Rs. per ton.	British	Non-British
		Rs. per ton.	Rs. per ton.
Structural Sections ...	40	2	46
Bars	45	21	47
Plates	21	4	32
Black Sheets	46	31	46

The duty on British sections and plates should be treated like that on rails and made Rs. 18 or the revenue duty, whichever is the higher.

102. It has been shown in paragraph 75 above that in normal circumstances the prices of British and non-British galvanized sheets are practically identical. If the lower of these two prices is taken, the duty required in future is seen to be Rs. 44 per ton. This duty, however, is based on the import price of corrugated sheets, whereas the import price of plain sheets is normally nearly Rs. 7 higher than that of corrugated. As the consumption in India of plain sheets is over 20 per cent. of the total quantity of galvanized sheets and the Company's output is in much the same ratio, a duty of Rs. 42 per ton on all galvanized sheets will be adequate.

103. For convenience of reference the above proposals are set out in tabular form below, along with figures showing the present duties :—

Table IX.

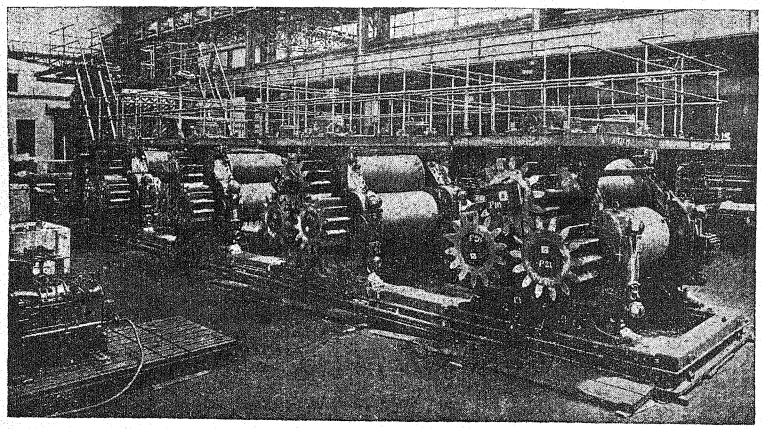
PROPOSED DUTIES COMPARED WITH PRESENT DUTIES

	PROPOSED DUTIES.			PRESENT DUTIES.		
	British	Uniform	Non-British	British	Uniform	Non-British
	Rs. per ton.	Rs. per ton.	Rs. per ton.	Rs. per ton.	Rs. per ton.	Rs. per ton.
Rails ...		17*	...	...	16¾	...
Fishplates ...		23*	...	...	7½*	...
Structural Sections	18*	40	46	23¾	...	37½
Bars	21	45	47	32½	...	46¼
Plates	18*	21	32	25	...	45
Semis	...	25	...	10%	...	20%
Black Sheets	31	46	46	43¾	...	73¾
Galvanized Sheets	...	42	...	53†	...	83
Sleepers	...	16	...	...	12½*	...

* Or the revenue duty, whichever is the higher.
† Rs. 30 if made from Indian sheet-bar.

104. The duties set out in Table IX have been calculated on the assumption that each product is dealt with entirely separately without regard to the duty fixed for any other product. If, however, minimum duties are fixed on the present revenue basis on rails and fishplates and on British sections and plates, whereas little or no duty is required to bring the landed prices of imported materials to the figures

SKODA SUGAR MACHINERY



Set of 14 Roller Mills 30″ × 60″ as supplied to Indian Sugar Factories

SKODA (INDIA) LTD.

8, ROYAL EXCHANGE, PLACE

Tel: "SKODASTEEL" 'Phone: CAL: 6966

shown in the third column of Table VII, the new protective scheme would provide a surplus over the requirements as calculated in the preceding chapters, which could be utilized to reduce the protection on other forms of steel.

105. The extent of the surplus will depend largely on such arrangements as may be made between the Railway Board and the Company for the supply of rails and fishplates from April, 1934 onwards. The Company understands that it is the policy of Government to purchase the whole of its requirements of rails and fishplates in India at the prices at which it could import these articles, but it trusts that the arrangements will be made which will compensate the Company, if the orders fall sensibly short of those assumed in Table I of this representation. The Company has already (paragraph 69) stated its views about the price at which rails can be imported into India, but for the purpose of indicating the nature of the adjustment now under consideration the price of rails provided for in the current contract, namely Rs. 110 per ton. f. o. r. Tatanagar, is taken by way of illustration, without implying that this is a proper price for a future contract. This price is Rs. 16 per ton above the price shown as necessary in Table V. On 80,000 tons of rails this would produce a surplus of about Rs. 12.8 lakhs. Similarly there would be a surplus of Rs. 0.7 lakhs if the present price of fishplates were continued.

106. If a system of uniform duties were adopted, this surplus of Rs. 13.5 lakhs would be the only amount available for the reduction of other duties. If, however, the system of differential duties were adopted, the duties on British sections and plates indicated in Table IX would be Rs. 16 and Rs. 14 per ton respectively above the requirments indicated in Table VIII. These would yield a total surplus of about Rs. 4.8 lakhs if the proportion of tested sections and plates bore the same ratio to the estimated future production as prevailed during 1932. The amounts available for reduction of other duties would be Rs. 13.5 lakhs if uniform duties are adopted or Rs. 13.3 lakhs if differential duties are adopted.

107. There are more ways than one in which such amounts could be utilized, but for the purpose of the present illustration it is proposed to show the effect of applying the whole of the amounts to the duties (uniform or non-British respectively) on sections and bars, since the duties on these articles as set out in Table IX are relatively the highest. The amounts available would serve to reduce the duties by Rs. 7 per ton on the uniform scale and by Rs. 10 per ton on the differential scale. The table of duties would then become :—

Table X.

PROPOSED DUTIES ABSORBING SURPLUSES

	British Rs. per ton.	Uniform Rs. per ton.	Non-British Rs. per ton.
Rails	...	17*	...
Fishplates	...	23*	...
Structural Sections ...	18*	33	36
Bars	21	38	37
Plates	18*	21	32
Semis	...	25	...
Black Sheets	31	46	46
Galvanized Sheets ...	...	42	...
Sleepers	...	16	...

* Or revenue duty, whichever is higher.

108. It is submitted that in the forthcoming revision of the Tariff, the opportunity be taken to make all iron or steel bar and rod of whatever quality, composition, size or shape subject to the same duty or duties as shown above for ordinary bars. At present bars of the kinds entered under No. 102c in the Tariff Schedule are subject to a duty of 10 per cent. if of United Kingdom origin and of 20 per cent. if of other origin. This has left scope for attempts to

defeat the purpose of the protective duties. It is believed that while the change might involve slightly heavier duties on certain types of non-protected bar and rod, it would reduce the duties in other instances; and that the net effect on Government revenues would be very small.

109. Similarly, it is desirable that all plates (not under $\frac{1}{8}$-inch thick) other than galvanized should be brought under one head in the Tariff Schedule and subjected to the proposed protective duties; this would avoid the possibility of future difficulties, while having little effect on the duties leviable on the basis of the present revenue duties and tariff valuations of non-protected plates. It may be necessary in the future for the Company to undertake the manufacture of the kinds of plates which are at present not protected. Item 102*e* of the Tariff Schedule could probably be completely eliminated without causing any complications, as it is doubtful whether any steel genuinely of the kinds described (alloy etc.) is imported other than in the form of bar or of some article falling clearly under some other head. The presence of this item in the Schedule leaves a loophole for attempts at evasion of the protective duties on such articles as black sheets; and as the Company is undertaking the manufacture of high tensile alloy steel for sections and plates it is important that imports of similar material should not enter at the non-protective duty. It is also doubtful whether item 102 *j* need be retained. And item 103 *n* C should be extended to read "sleepers, other than cast iron, and bars of special shapes therefor".

110. The Company also suggests that the Board consider the advisability of arranging that any substantial reductions of duty which may be recommended be effected by relatively small stages at fixed intervals. If there is a prospect of a large reduction it is inevitable that the market will realise the possibility several months before effect can be given to it; there will then be a strong inducement for buyers to hold off the market, which will disturb the trade and may seriously affect for a time the output of the Indian industry. If, however, the reduction is made in stages it can probably be arranged that they shall be such as are not much, if at all, greater than the normal fluctuations of prices which occur from time to time. In that event the change could be effected without any appreciable disturbance to the course of trade and manufacture.

111. In this representation the Company has used its best endeavours to place before the Board a full, frank and detailed statement of all the factors affecting its costs, selling prices, profits etc. Calculations of the duties required must be based on specified figures for the prices of imported steel. In view of the extent to which previous estimates have proved to be erroneous, the Company considers that no estimates of the future trend of prices should be formed, but that the duties should be based on the average prices which actually prevailed for the first six months of 1933. Prices for a shorter period would probably be misleading, in view of the relatively frequent fluctuations. In suggesting this basis the Company should not be regarded as estimating that these prices are likely to be maintained for any length of time. They are merely an ascertained basis on which duties can be framed which would be adequate for the circumstances then existing, and the Company holds it to be essential that future fluctuations of prices should be dealt with in the manner proposed in the next paragraph. While it is true that the level of prices in June and July, 1933 was somewhat higher than the average for the first half of the year, this was due to the recent reorganization of the Continental Steel Cartel and past experience has shown that such Cartels have not been able to maintain a high level of prices for any length of time and prices

collapse to a very low level as soon as the Cartels break. Apart from this, world conditions are adverse to the maintenance of a high level of prices in the Steel Industry for many years to come. Currency conditions are unstable and any departure of the Franc from gold parity may lead to a collapse of prices and very severe competition from the Continent. Even when trade conditions improve, the competition of the up-to-date steel-making plant at present lying idle throughout the world will keep prices down for as long a time as it is necessary to estimate for present purposes.

112. The practice of the Tariff Board has hitherto been to base its proposals on somewhat meticulous calculations of costs, prices etc. This would certainly be unexceptionable and satisfactory if machinery were utilised to meet any serious changes in the factors on which the calculations of the Tariff Board are based. Such machinery has in fact been provided to meet conditions resulting from an unforeseen fall in import prices. In this connection attention is invited to Chapter III of the report of the first Tariff Board in which the proposal was made that power should be conferred on the executive Government by legislation to impose additional duties, if after such enquiry as they might consider necessary they were satisfied that steel was entering India from abroad at such prices as were likely to render the protection given ineffective. Such power has actually been conferred by legislation on the Governor-General in Council by the Steel Industry (Protection) Act, but during the current period of protection, although import prices have fallen to a considerable extent, the power has not been utilised except in the one case of galvanized sheets. The scheme of protection may also break down through unforeseen circumstances beyond the control of the Company other than a serious fall in import prices, such as a strike, an unavoidable breakdown of machinery or of transport. During the current scheme of protection, apart from the great strike of 1928 the scheme broke down because of the inability of Government to order the tonnage of rails on which the whole scheme of protection was based, as is clear from a reference to paragraph 109 of the Report of the Tariff Board. Due provision, therefore, requires to be made to prevent the failure of the next scheme of protection owing to such serious unforeseen circumstances. It is suggested that in the future legislation there should be statutory obligation on Government to ascertain, not less frequently than once a year, the prices at which protected kinds of steel are being landed at Indian ports without duty and to raise the duties by the necessary amounts if the prices so ascertained are more than 10 per cent. below those assumed by the Board as the basis of its recommendations. If the enquiry shows that prices have on the other hand increased by more than 10 per cent., steps may similarly be taken to reduce the duties, after giving the Company an opportunity of adducing reasons, if any, against such reduction. The increase or decrease of duties which might be necessitated by changes in import prices need be made by executive action alone, and the facts reported at the earliest opportunity to the Legislature. The statutory provision of the one year period need not prevent urgent action being taken in a sudden and grave emergency on the application of the Company or otherwise.

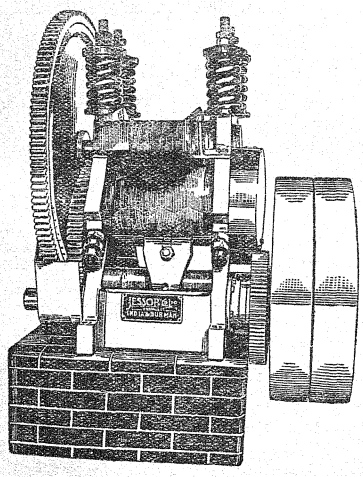
113. When any action is required to make the scheme of protection effective owing to reasons other than a change in the prices of imported steel, it is suggested that it should be taken after full enquiry and with the sanction of the Legislature. It is only by the adoption of such measures that the protection as proposed by the Tariff Board and finally adopted by Government and the Legislature can be made effective. If these measures cannot be adopt-

"PHOENIX"

PATENT SUGAR-CANE CRUSHER

DESIGNED AND MADE IN

INDIA



SPECIAL FEATURES:

Unbreakable Side Frames of Solid Steel. Top Roll Running in Roller Bearings. All Shafts in Ball Bearings. Machine-cut Gears in full contact unaffected by adjustment of rolls. Spring-loaded Top Rolls. Trash turner with simple adjustments.

STANDARD SIZES:

3 Roller 10" × 14" Output 40/50 mds. per hour, Extraction 67/70%

6 Roller 10" × 14" Output 70/90 mds. per hour, Extraction 72/75%

ed, the only alternative seems to be that the Tariff Board should recommend duties on a higher scale so as to provide a margin for unforeseen circumstances.

IMPROVEMENTS IN WORKS EFFICIENCY.

114. It has already been shown at earlier stages of this representation that the Company has during the last seven years succeeded in reducing its Works cost substantially, apart altogether from the effect of the fall in the prices of coal and spelter; and general indications have been given of the economies effected in the use of coal and labour. The Board may, however, wish to have fuller information on the subject of Works efficiency, as this is the main factor making for the soundness of the industry which is within the Company's control. During the period covered by the Board's review in 1926, the Company's efforts were necessarily concentrated mainly on ensuring that the volume of output anticipated from the then new plant could actually be obtained. As soon as this was done, it was necessary to focus the energies of the Works' organization on improving the efficiency of operations throughout. The success of this policy is evidenced by the reductions in the costs.

115. Progress in efficiency is dependent largely on the efforts of the staff of each individual department and much of the success acheived is due to the increased attention given to economy by the departmental staffs and to their greater experience of the plant and of the problems before them. The Company, however, was not content with such improvement as could be effected by the staffs of the various departments as they existed in 1926. The Metallurgical Department, which had been started in 1925, was rapidly extended and developed a Works inspection branch which continuously scrutinised the output and accuracy of product of the various mills. In 1927 a system of close supervision of the supplies of coal was instituted. A Fuel Economy Department was established in 1928 and a Lubricating Engineer appointed a little later. Arrangements were made for the constant scrutiny and criticism by those concerned of all available figures bearing on efficiency and costs and for joint consultations on all serious problems or new proposals, which are effected by means of committees of departmental officers. Prominent among these are the Retrenchment Committee, which has already achieved much useful work, and the monthly Cost Committee of all departmental heads presided over by the General Manager.

116. The over-all consumption of coal per ton of saleable steel for each of the last seven years has already been set out in Statement 26. As these figures vary to some extent according to the nature of the output in each year and as they do not show the stages at which economy has been effected, fuller details are given in Statement 32, from which it can be seen that the consumption has been reduced at each stage. In some of the mills the optput and the nature of the product have varied considerably during the period. It is therefore considered that the consumption of coal in the manufacture of merchant mill products is the most suitable simple criterion of the technical progress achieved. The consumption has fallen from 3.6 tons in 1926-27 to 2.8 tons in 1932-33, a saving of over 20 per cent.

117. Statement 33 shows the yield of good steel from ingots at the rolling mills for the years 1926-27 and 1927-28, as representing the beginning, and for 1931-32 and 1932-33, as representing the end, of the period under consideration. The improvement at the new 28 inch Mill is only small (due to the commencement of rolling several new and difficult sections on this mill during the last two years) but at all the other mills there are marked improvements. This is the more satisfactory as improvements in this respect are dependent largely on the increasing skill of the workmen and are not the result of the installation of new plant or appliances. The value of this kind of improvement can be illustrated by the results at the Merchant Mill. If the average yield of the last two years had been only the same as that of 1926-27 and 1927-28, the amount of good material available for sale would have been nearly 4,000 tons less in the later two-year period and there would have been a correspondingly larger amount of scrap and also a larger consumption of ingots and blooms at the previous stages. Owing to this latter factor and to the difference between the value of good product and scrap, the profits would have been less than they were by nearly Rs. 3 lakhs over the two-year period, if the yield had not been improved.

118. A further method of economy has been the production of an increasing proportion of the the total ingots required by the Duplex process (which, in the Company's circumstances, is the cheaper process) and a decreasing proportion in the Open Hearth plant. The statistics are contained in Statement 3 (*a*). The latter plant must be kept in operation to absorb unsaleable scrap, but its operation is now limited to the extent required for this purpose so far as it is consistent with the production of the kinds of steel required.

119. Statistics of the total expenditure on labour have already been given (Statements 21, 22 and 23) as well as of the average daily number of men working (Statement 24.) The cost of labour per ton of product in each of the main producing departments is now set out in Statement 34. And the average number of men working in each department is given in Statements 35 (*a*) to 35 (*m*), along with the total output of the department and the output per man per year. Whereas in 1926 most of the departments were comparatively new or, if not new, were to a large extent equipped with new plant

have considerable experience in the application of OILS and can supply Oils of which the most critical Engineers will approve.

MAITLAND CRAIG LTD.

E-2, CLIVE BUILDINGS, CALCUTTA.

and machinery, the workmen have in the interval become familiar with the plant and the work required of them and it has generally been found possible in practically all departments to refrain from filling such vacancies as have occurred during the last few years and thus to obtain an appreciable reduction in the number of men and in the cost of labour per ton of product and an increase in the output per man.

120. It cannot be denied that the labour employed by the Company was excessive in the past and may be considered excessive now if judged by European or American standards. The substantial reduction in numbers that has been achieved has been made gradually without causing individual hardship, mainly by the method of refraining from filling up vacancies. The actual wages per man have risen. If a greater reduction in labour costs has not been achieved it is because of the solicitude of the Company for the welfare of its labour and its keen desire to treat it with fairness and consideration. In the matter of their emoluments, the amenities provided or the privileges enjoyed by them regarding leave, provident fund etc. the Company claims to treat its men at least as liberally as, if not more so than, any other large commercial concern in India that it is aware of. Even during the period of acute depression through which the Company has passed when production had to be curtailed, it avoided dismissing the men outright as far as it was possible and took steps to provide employment for as many as possible by reducing the number of days per week and by adopting a system of leave by rotation. It is the intention of the Company to pursue the same policy in the future because it is convinced that it is right in the mutual interests of both the employers and the employed and ultimately, therefore, of the Steel Industry.

121. In addition to the salient items of economy dealt with above, appreciable reductions have been made in the consumption of stores and materials and economies have been effected in various other ways. The combined effect of all the economies in each department can best be seen by comparison of the "costs above net metal" which are set out in Statement36. In the case of pig iron these figures represent the cost per ton of iron after deduction of the cost of the materials charged into the furnaces reduced by the value of the scrap produced and after credit has been taken for the blast-furnace gas used for steam-raising ; in the other departments they represent the cost per ton of product after deduction of the cost of the metal consumed reduced by the value of the scrap produced. It will be seen that there have in practically all cases been large reductions in these costs ; these reductions represent the combined effect of improvements in efficiency and of falls in the prices of materials other than those forming part of the charge of the furnaces and other than spelter. In almost every department "costs above net metal" have been obtained during the last year which are lower than any corresponding cost since 1920.

122. The part played by the staff of the Company in obtaining the economies achieved has been indicated above, but no efforts by the staff could have secured the full results if much new plant had not been installed by the Company during the period in question. The Company's 1926 programme of additions to plant is shown on pages 31-32 of Vol. II of the Report of the 1926 Enquiry. Although changes in the programme were found to be necessary, effect has been given to practically all the major items. Two of the blast furnaces have been greatly enlarged and four blowers of unusually high capacity installed. A third converter and a third finishing furnace have been erected at the Duplex plant. Several new and more efficient gas-producers have been erected. Additional soaking pits have been constructed at the New Blooming Mill and a 35 inch Roughing Mill has been installed for rough-

ing the blooms for the new 28 inch Mill and furnaces for reheating them. Quite recently a new motor has been erected at the Sheet-bar and Billet Mill and a new unit of Sheet Mills installed: these items, however, have not appreciably affected the costs for roughing the havim roc2ife 1xf s,ix etaoin srdlugkqj 1932-33. New auxiliary equipment (cranes, charging-machines, shears etc.,) has been supplied to most of the main producing departments. For the "service" departments, new rolling-stock has been provided and the railway tracks thoroughly overhauled and extended where necessary; an 18,000 K. W. Generator has been installed and a battery of 20 Wicks boilers replaced by 10 Thompson boilers of much higher efficiency; the foundry has been extended and a number of other improvements made.

123. The above additions to the plant have contributed at many points to the improvement in efficiency. One result which will be of special interest to the Board is that they have made it possible for the Company to keep the old Blooming Mill and the old 28 inch Mill closed since the end of May 1932. This is turn has enabled the Company to ciose down the old hand-fired boilers in Boiler House No. I. These two changes have contributed substantially to the reduction in cost of tht Company's output in 1932-33.

124. Other additions to the plant are at present in progress. They are mostly of a relatively minor nature. Recently, however, the Company has placed an order for a large plant for fine-cleaning the whole of the blast-furnace gas, with the object of securing the benefit of greater efficiency in the combustion of this gas in stoves and boilers and of rendering it suitable for use in reheating coke-ovens so that the maximum amount of coke-oven gas may be liberated for use in replacing producer-gas. The Company also expects during 1933 to oder coal-unloading and mixing bunktrs for the coke-ovens with the object of reducing the cost of handling the coking coal and still more of securing a more uniform coke which should enable the consumption of coke per ton of iron to be reduced. The programme of future additions to the plant has betn set out in Statement 19, with explanatory notes, which show that a large proportion of the proposed expenditure is aimed at further reduction of costs or improvement of efficiency.

125. The Company believes that the above record will satisfy the Board that every effort has been made to bring the Indian Steel Industry to an increasingly better standard of efficiecy and that, when regard is paid to the circumstances in which the improvements have been made and particulaly to the very grave effect on efficiency (as wtll as on all other aspects of the Company's affairs) of the strikes of 1928 and their aftermath, the Board will agree that the results achieved art such as fully to justify the Company's contention that the necessity of further protection does not arise from any omission on the part of the Company.

126. While the Company will continue to strive for higher tfficiency in its operations and is confident of achieving a measure of success in that direction, it must not be anticipated that progress can be as rapid in the future as in the past. The field within which economies were possiblt has already been greatly narrowed. The Company has made a reasonable allowance for the effects of the new expenditure and further improvements in efficiency in its estimates of the future Works costs and trusts that the Board will recognise that the realization of these further reductions will represent no small acheivement.

127. In paragraph 140 of the 1926 Report, the Board expressed the view that the Company would be well advised to keep more closely in touch with technical developments in Europe than it had done in the past. The Company has acted on this suggestion and in the interval many of its officers, both Indian and other, have visited steel works in the United Kingdom and on the Continent and have

BABCOCK BOILERS

REGTD. TRADE MARK

A WARNING

The name "Babcock & Wilcox" as applied to boilers, is of such long standing and is so well known that to many people it denotes a type rather than specific make of boiler.

As a result we wish to point out that boilers bearing our name can only be obtained from us or our licensees. There are some boiler manufacturers who, for want of any intrinsic merit in or originality of their own designs, describe their products as being "Babcock & Wilcox Type". Whilst we appreciate the compliment, we wish to warn prospective purchasers that only genuine Babcock & Wilcox Boilers, desiged and manufactured by us' have the advantage of Babcock Engineering' Babcock Experience, Babcock Patents, and Babcock Service in looking after the installation when it has been made.

taken all such other steps as were possible to familiarise themselves with the methods which have led to the progress of the industry in those countries. Several of the younger Indian members of the technical staff have spent periods of a year or more in various European works or following special courses of study in Europe. In some cases the Company has borne practically the whole cost of these visits and in others it has given assistance and provided special facilities to Indians proceeding on long leave. The Company is doing and will continue to do everything possible to study developments in all other countries and to apply any improvements of which information may be obtained to the practice at Jamshedpur, wherever practicable. Similarly, tenders for new plant, equipment etc., are called for from makers in all countries equally. As regards both the contact of its staff with modern operating progress in all other countries and the planning of new equipment on the best lines and its purchase in the most suitable markets, the Company is doing everything possible, in spite of its geographical disadvantage, to secure the benefits of new developments wherever they may occur.

SUMMARY.

142. During the first six years, April 1927 to March 1933, of the current scheme of protection, the Company succeeded in reducing the cost of making rolled steel to the extent required by the Tariff Board in 1926, the costs actually obtained in the early part of 1933 being lower than those anticipated by the Board for 1933-34. The average costs for the whole period, however, were not as favourable as the Board's estimates, owing to the serious and prolonged effects on efficiency of the strikes of 1928.

143. In spite of the heavy fall in the consumption of steel in India, the Company in 1932-33 produced and sold practicaly as much steel of those kinds which are taken by the general market as the Board estimated that the Company would be able to produce by 1933-34; and the average quantity of these kinds of steel produced and sold in the five years 1927-28 and 1929 (April) to 1933 (March) was slightly greater than the Board's estimate of the average production for the whole period. In 1932-33 the Company supplied over 80 per cent. of India's consumption of sections, bars and plates and 40 per cent. of the consumption of sheets. The drastic reduction in the orders for rails, fishplates and sleepers, which according to the Board's estimates should have absorbed 43 per cent. of the Company's output of saleable steel, made it impossible for the Company to attain the estimated total output of steel. The orders for rails alone fell from over 180,000 tons for 1927-28 to about 35,000 tons for 1932-33, whereas the Board had estimated that the Company would receive orders averaging 195,000 tons annually.

144. The fall in the consumption of steel in India was very marked during the last three years in respect of steel of tested quality. As the price of this material was distinctly higher than that of untested steel, the Company's position was unfavourably affected. A further result of the fall in demand, practiculaly during the last three years, was that the Company had to sell increasing proportions of its output in distant parts of India such as Bombay, Karachi, Madras and Rangoon. This involved much heavier expenditure on freights in the distribution of steel than had been estimated by the Board; the anticipated "freight advantage" was turned into a disadvantage, at the expense of the Company.

RECENT HAPPENINGS IN THE TEA INDUSTRY

The subject of Tea has always borne the savour of romance. In days gone by the clipper ships from China raced madly across the seas to get home the first cargo. When the fragrant herb was found to be indigenous in India and the Indian Tea Industry launched, fortunes were made out of the promising new venture ; but the tea industry like most other highways of commerce has had its ups and downs. In the last six years it has certainly had its downs. A glance at the diagram will show how cataclysmic has been the pace.

Glancing at the diagram a second time it looks as if the industry took the drop philosophically from 1927 to 1929. It then started a hectic attempt to reduce costs. But however much economy was practised, sales and costs ran a dead heat up to the beginning of 1932, when a rise took place but by no means sufficient to get back to the stage of profit making. Now let us look into the causes leading up to the recent crisis.

It is a curious fact—but nobody appears to have noticed it that the slump in tea started shortly after the stabilisation of the rupee at 1s. 6d. There is no question whatever that the production of teas in Java and Sumatara had a great deal to do with the disaster. But why should these countries have been able to undersell a highly organised industry like Indian tea? One explanation that is given is that Java, Sumatara and Ceylon being more near the Equator than Assam and Darjeeling, are enabled to manufacture tea all the year round, while Assam and Darjeeling are out of the market between December and May. Did the one and sixpenny rupee give Java and Sumatara an advantage? The coincidence of dates is certainly curious ; but the whole of the industry shared in the slump. Crack concerns bowed their heads and paid diminished dividends to disgruntled shareholders.

Turning to the chart again, it will be noticed how the fall in commodity prices affected the value of Tea shares. The decline was persistent for over five years reaching the bottom by about August-September, 1932.

Again the chart illustrates in a most graphic manner the determined efforts of producers to bring down costs. Only the variations in common teas have been noted on the graph. But the following figures may be noted as covering the period under review.

COSTS

	Assam.	Darjeeling.	Dooars.
1927 ...	10.70	12.65	9.21
1928 ...	10.60	11.85	8.75
1929 ...	10.05	11.35	8.15
1930 ...	10.35	12.10	8.26
1931 ...	9.40	11.30	7.54
1932 ...	8.00	10.00	6.00

The average prices realised since August, 1933 are as follows :

11.8 13.5 8.11

Now let us go back a little and look into the history of the last few years, particularly as regards restriction. During the war, tea prices rose to a tremendously high level and after the war there was a slump. This was followed by a half-hearted attempt at restriction of a voluntary nature.

The industry recovered for a time but again fell away and a scheme of restriction was arranged in conjunction with Java, Sumatara and Ceylon for a period of one year in 1930. But this was a failure as it was found at the end of the period that the Java crop showed an increase of about ten per cent. on the agreed amount. So the tea industry of India and Ceylon fought the Dutch producers to a standstill producing in great quantities and as cheaply as it was possible to do. This is to some extent illustrated on the graph.

Now we retrace our steps again. On June 2, 1919 the British Government gave a preferential duty to British grown tea amounting to two pence a pound. This continued for ten years until 1929 when Mr. Winston Churchill who was Chancellor of the Exchequer at the time exempted teas from duty altogether ; reverting to the motto of half a century before of a "Free Breakfast Table", the war cry of the Liberal party at that time ; synchronising with another slogan "Three acres and a cow". This sweeping away of the tea duty did the Conservative party no good. It destroyed a source of revenue that worried nobody but hurt the Indian and Ceylon tea industry very badly ; and apparently did not enlist a voter to the Conservative cause ; as in 1929 they were swept out of existence by the Labour party and Winston Churchill has been without a portfolio ever since ; although the Labour party is now in the wilderness and a National Government has taken its place. Moreover, the preferential tea duty was again imposed from April 20, 1932 at the rate of four pence a pound on foreign and two pence a pound on Empire grown teas.

The effect of these happenings apparently paved the way to a fresh scheme of restriction and this time the initiative came from the Dutchmen. An English Statesman wrote to Mr. Poland Q.C. a good many years ago :

In matters of Commerce the fault of the Dutch
Is in giving too little and taking too much
So just to discourage the Dutch Government
W'll clap on Dutch bottoms twenty per cent.
Twenty per cent, twenty per cent.
W'll clap on Dutch bottoms twenty per cent.

What brought about this pregnant piece of rhyme is lost in obscurity. But the Statesman's (was

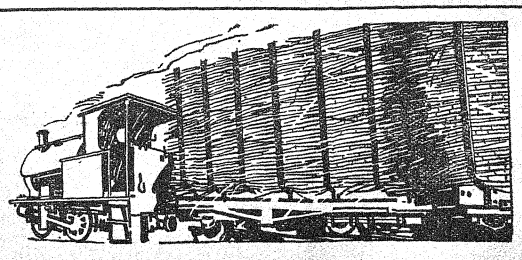
CALCUTTA



it Lord Canning) estimate of the Dutch was evidently quite sound, as is shown by their treatment of the 1930 agreement. Only this time they represented the underdog which made things considerably easier for the Indian and Ceylon tea industry. An agreement was concluded and came into force on May 22, 1933.

The agreement in question is to run for five years with a provisional restriction on exports for the first year of 15 per cent. This figure is subject to adjustment annually in accordance with the requirements of the market. The agreement further provides for the restriction of all new planting on established gardens except to replant vacancies, and is limited to a small proportion on small properties. Furthermore no tea seed can be exported. Since this Restriction Scheme has become law, North and South India have entered into a "Gentleman's Agreement" to further restrict production.

The first sale under the new conditions took place on June 5, 1933 and since then conditions in the tea industry have steadily improved.

The following figures will be found interesting:

	Million lb.
Total exports 1932 from India, Ceylon, Java and Sumatara	830
Total export quota 1933	685
From the same countries	145
Actual world consumption (excluding India) 1932	850
or	165

more than this seasons export allowance. Indian consumption amounts to approximately 50 million pounds per annum. The Tea Cess is also allocating Rs. 6½ lakhs to propaganda to encourage Tea drinking in India.

Last year this country produced 400 million lbs.

The export allowance is 320 million lbs.

Add local consumption 50 million lbs.

so that it will be seen that the local position is comparatively sound.

Stocks in the United Kingdom are given for information:

	1933.	1932.	1931.
April ...	291	200	241

The average monthly total deliveries from stock are 44½ million lbs., so that the 165 millions deficit in the export allowance represents about four months supply.

From the above figures it is fairly clear that the position will adjust itself within the coming months and the industry looks like getting into a healthy position again.

The effect on the value of Rupee stocks is very striking as will be seen from the table opposite on page 1066.

Leaving aside the question of Java and Sumatra for the moment let us examine how the 1s. 6d. exchange has affected the tea industry. Here we have the "Mount Ararat Tea Estate" which has been in the habit of sending its crop to London for sale. The tea comes down the river in flats and off it goes to be auctioned at Mincing Lane. Possibly a portion is retained in Calcutta to be dealt with in Mission Row. We will suppose the total crop is 380,000 lbs. The Managing Agents or Directors decide what is to be done for the best and having been for a good many years engaged in the industry they know their business. Well, 300,000 lbs. goes to London and at Mincing Lane realises seven pence a pound or £8,750. This must be; Calcutta obviously cannot absorb all the tea produced in India.

Telegrams: "BALMER"

Mincing Lane is the market and you can't get away from it. Now the Mount Ararat is a rupee company but if it were a sterling company most of that money has to come back to India. Coolies have to be paid, so have managers and assistants ; there are other items for which the money is required such as land revenue, managing agents commission etc., and it is to be hoped a dividend for the shareholders. So back the money comes to India Rs. 1,16,665. If exchange had been at ¼ the amount would have been Rs. 1,31,250. Elementary finance you murmur. But to use a well-worn expression "Money Talks". In the interim the Finance Minister has got disgruntled because the Income Tax returns have fallen ; so he claps on a super tax or raises the original import, it does not matter much. So our unfortunate Mount Ararat is punished by not paying a high enough dividend on account of a raised exchange and has to pay an increased impost on what is left for the wretched shareholders. Which is what is generally known as a vicious circle and it would be hard to find a better name for it.

Digressing for a moment from the tea industry, the writer had a curious experience while in London in 1926. He was in conversation with the Secretary of the millionaire propietor of a large private bank. Now this bank is a kind of fairy godmother to the leather trade of Bermondsey. At one time every meat salesman in Smithfield had a banking account. With Beggarstaffs, he would not have been thought respectable if he had banked elsewhere. And much the same thing applies to the Bermondsey leather dressers and the bank first mentioned.

"See here" said the Secretary to the writer. "I don't know what is going to happen to your hide trade in India. We have dozens and dozens of leather dressers on our books. They treat the old man (meaning his millionaire boss) like a father. When they are tried of pouring their woes into his ears they spill the first by any manner of means. He said he had the balance into mine. "Now" he went on "only to-day a big man was talking to me and he is not ordered his usual indent of kips. But the 1s. 6d. exchange had killed all his profit on the transaction. He said he was punting around to try and find another source of supply. Its all very well for your Government to raise exchange, but its going to play hell with your export business".

Japan is tearing the heart out of India and forcing our Government to put prohibitory tariffs on all kinds of goods because of her depreciatied yen. Is there not moral to the whole business. That wise old bird, Sir Purshottamdas Thakurdas, proved himself not only a super finacier but a modern rival of Ezekiel, Isaiah and all the other prophets of old; when he wrote his minute of dissent on the findings of the Hilton Younr Commission. The only difference between him and the Biblical prophets being that he was a disciple of the famous American who laid down the principle that "you should never prophecy until you know" and Sir Purshottamdas certainly knew what he was talking about on that occasion. A good many people contend that the 1s. 6d. exchange and the demonetisation of silver by ndia and China caused the horrible world depression we have gone trough these last years. There may be more truth in that theory then meets the eye. One thing is certain the two events synchonised. And India and China have a lot to do with the world's trade when they are left alone to mind their own business. This is an article on the Tea Industry and criticism will probably be passed on the mountain ways of the contributors to Indian Finance on financial subjects. But if we are wrong, probaly there is a grain of truth in what we have written.

TEA MACHINERY

Some Extensive Orders

One result of the improved prices of tea has been the steady demand for machinery that has sprung up. Davidsons of Belfast must be working overtime to comply with the sudden burst of orders that has descended on them. Their agents in India, the Planters Stores and Agency report that they have received more orders for machinery in the last two months than they had in the whole of the previous year. As an example they cite the Overhead Crank Bearing Tea Roller. This machine was introduced six years ago; designed to give extreme pressure in rolling tea leaf. It was well received and its special features of rigidity, silent running and protected lubrication received favourable comment on all sides. A good business was done but at the present moment orders in hand and coming forward nearly break into a hundred machines, which at £300 a piece should make Sir George Schuster rub his hands when reckoning up the duty to be levied when the machines arrive.

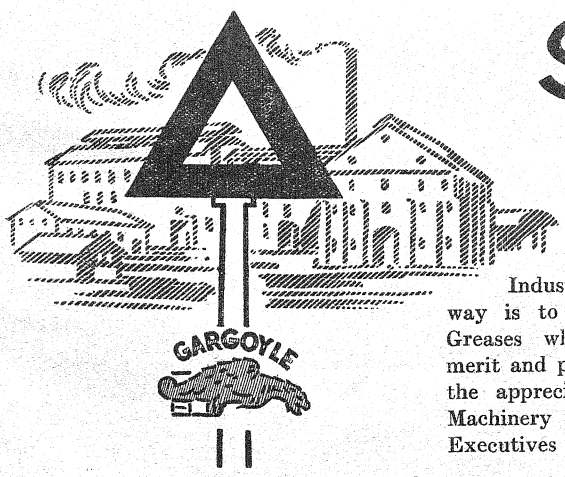
Another, an instance of the influence of politics on industry is shown in the demand for Sirocco Fluff Removal Plant. This has been caused by the Whitley Commission on Indian labour. They were not satisfied with the health conditions of sorting rooms in the tea industry. But the Sirocco plant will remove every particle of fluff from the atmosphere making the air quite clean and greatly improving the condition of the work rooms and the men working therein.

Davidsons recently introduced an improvement to the Sirocco Endless Chain Pressure Drier, by adding auxiliary leaf spreaders for re-spreading the leaf on each of the roll trays as the leaf passes through the drying chamber. This improves drying efficiency considerably. These Sirocco Driers are interesting. The Duplex Tilting Tray Pressure Drier for example is semi-automatic and hand-operated. The makers claim that the tea is always under perfect control while there is no danger of over-firing as the tea can be removed continuously as soon as the particular batch is finished. But Davidson's have always done good work and their products are too well known to need much description.

FERTILIZERS.

There is nothing much to write on this subject. It would require the Angel Gabriel with his trumpet or some equally strong influence to teach India, on the question of manures. Of course tea does get manured. The tea industry is an organised undertaking and any garden that did not manure would be left hopelessly behind. But it is other branches of agriculture that are not so well looked after. Take sugar for example. We take off our topi to Madras where a moderate amount of attention appears to be paid to this important point. But on the other hand look at Bihar. The writer happened to be marooned at Samastipore Station (Railway not Police!) a month ago. The permanent way, far and near, was littered with trucks laden with sugarcane. And what dreadful stuff it was compared with the cane one sees in such abundance in Natal; it made one almost shed tears. Here was a case of supply attempting to cope with insistent demand, and, what a supply! Hardly worth while taking to the mill. Certainly not worth the freight that was enriching the shareholders in the Bengal North Western Railway. There were trucks containing good cane but they were in the minority.

Sugarcane wants more fertilising than almost any other crop. And obviously all that had been



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike. ∴ ∵ ∵

Costs refer to 1931 accounts, but we are informed that for 1932a reduction of over 25% will be showu in most cases (except those Companies which are already monufacturing about annas six per lb. or under).

done to the soil on which most of this cane had flourished were the rains that had descended, the winds that had blown and the sun that had shone—and trust to luck with a crop that will take everything out of the soil that is in it in two years. And so it has been going on in India for thousands of years; a land that should be flowing with milk and honey. But year after year nourishment is taken out of the soil in the shape of crops and nothing put back; all is left to Nature. Nature does its best. The beneficient rain that falls dissolves the nitrogen in the atmosphere and that replenishes to a certain extent but not all, not by any means. It is a vicious circle. The wretched cultivator is ground down by moneylenders, landlords and government. Where can he find money to buy manure to fertilise his land. Yet if he did the government would get its revenue easier, the landlord would receive his dues without going to the expedient of burning the man's house down, or threatening to do it, and the money lender would flourish more like a green bay tree than ever.

According to that priceless volume *Indian Finance Year Book*, there are 1,06,166 co-operative societies in India. Why not utilise such a far-flung means of propaganda. It is ready to hand and extends from Cape Comorin to Peshawar. Year in and year out, drive in to the cultivator through the co-operative societies the elementary fact that team work pays in all branches of life.

It would be difficult to single out the worst offender among the Indian tracts. But Bihar cannot be far behind. The lack of phosphate in the soil must one of these days seriously affect the manhood of the province. These poor people are in such desperate straits that in many parts they can only afford a hot meal once a month. When an epidemic occurs their mal-nutrition makes them easy victims; poor creatures they have no reserve of resistance. The writer remembers one epidemic of cholera in the latter part of the War. The loss of life was terrible and the sights to be seen were such that no one could ever forget. And yet how industrious they are, these people. Watch them when they have crops to gather. All turn out and work! Beavers are drones alongside them . One cannot help but love these simple industrious people. If they could only be taken by the hand and taught wisdom, how glorious it would be.

But we are straying from the subject of tea and have wandered on to sugar. Well, lots of misguided people put sugar in their tea.

The effects of the long-continued slump have made themselves felt in many ways on the Indian tea industry. The question of fertilisation loomed large and the expense item was considered. One large tea garden in Northern India ceased fertilising altogether. The effect was startling; a drop of 25 per cent. in production being registered. Now the policy of restriction has become *a fait accompli* the questions of fertilisation, quotas, export licenses etc. become mixed up and all gardens and groups of gardens will adopt their own policy to cope with the situation; which is further complicated by the gentleman's agreement between the planters of North and South India to limit production. The problem was being discussed recently by the scientific adviser to a group and a small crowd of men interested. The writer as a man of ink and paper listened. The scientist advanced the argument that after due calculation of what was required of any particular garden had been made, that portion should be put into full cultivation and fertilisation, the balance of the land being abandoned for the time being and left to look after itself. His argument was that the result would be a crop of the required quantity with its normal quality; saving labour and cultivation expense. As to the question of bringing back the garden labour to the numbers required for the whole garden; as the restriction period is for five years, a selected period; the gardens would have ample

CALCUTTA & CHITTAGONG

opportunity to bring together the required coolies by the time they were required, if the restriction scheme were dropped. He tamped down his argument by the assertion that a garden can be restored to full and yield at any time when the necessity arises. He quoted the recent experiments on the Suffry-Lushai land at Borbhetta as recorded in the Annual Report of the Indian Tea Association, which reads as follows :—

The Suffry-Lushai Experiments at Borbhetta

These consist of 72 plots of very unequal yields. In 1929 and 1930 these were used for trials of no manure, and application of the same manure at 5 different dates. The experiment was being repeated on twelve different plots. The experiment was successful in showing, with satisfactory accuracy, that in the first year (1929) time of manuring made no difference to total crop up to June 15th., but application on July 15th., failed to produce its full effect in that year. In 1930 the same crop was produced whatever the time of manuring, the unused balance of the manure applies in July, 1929, exerting its effect in early 1930.

In 1931 and 1932 only 6 plots were used for each date of manuring. Crops remained the same, well within experimental error, for all times of manuring, but the standard error was high.

Effect of ceasing to Manure

The effect of time of manuring having been determined by the end of 1930, these Suffry-Lushai plots were used to determine the effects of ceasing to manure in 1931 and 1932.

The two sets of 6 plots each which never had been manured, continued to be left unmanured as check plots.

The 60 plots which had been manured in 1929 and 1930, were divided into two sets of 30 plots, such that yields of each set had been equal over the previous four years. In 1931 one set of 30 was manured as before, while the other set of 30 plots was left unmanured.

Before the 1932 season, the 30 plots manured in 1929 and 1930 but not in 1931, were divided into 5 sets of 6 plots each, such that yields of all five sets had been practically equal over the past five years.

On two of these sets of 6 plots, manuring was resumed in 1932, the other three sets remained unmanured.

The following results were obtained in mds. tea per acre :—

	1929.	1930.	1931.	1932.
A. Manured continuously 1929, 1930, 1931, and 1932 (average of 30 plots) ...	9.60	9.54	12.70	12.60
B. Manured in 1929 and 1930 not in 1931), but manured again in 1932 (set 1) ...	...	...	10.33	11.56
(set 2) ...	...	...	10.32	11.68
Average ...	9.60	9.54	10.32	11.62
C. Manured in 1929 and 1930 not in 1931 or 1932 (set 3) ...	...	...	10.31	9.04
(set 4) ...	...	...	10.31	9.06
(set 5) ...	...	...	10.22	8.92
Average ...	9.60	9.54	10.28	8.99
D. Never Manured (set 6) ...	...	...	8.77	7.80
(set 7) ...	...	...	8.88	8.13
Average ...	7.25	6.65	8.82	7.96

Cumulative Effect of Manuring

These plots again illustrate this point, the gains under continuous manuring with 40 lbs. nitrogen per acre being (A against D).

1929.	1930.	1931.	1932.
2.35 mds.	2.89 mds.	3.88 mds.	4.64 mds.

Effect of ceasing to manure

To stop manure even for one year (B : no manure in 1931) loses this cumulative effect, the gains over no manure (D) being :—

	1929. mds.	1930. mds.	1931. mds.	1932. mds.
	2.35	2.89	1.50	3.66
Loss compared to continous manuring ...	...	...	2.38	0.98

The loss in 1931 when manuring was stopped is about equal to the gain made in 1929 when manuring started.

DAVIDSON & COMPANY, LIMITED
Sirocco Engineering Works, Belfast, NORTHERN IRELAND

COLOMBO: *Davidson & Co., Limited, Forbes Road.* QUILON: *Harrisons & Crosfield, Ltd.*
CALCUTTA: *The Planters' Stores and Agency Co., Limited, 11, Clive Street.*

In 1932 when manuring was resumed there is still a loss compared to continuous manuring of nearly 1 md. per acre, but this loss is not very great. It will be observed that the gain of B over C in 1932 is about 2.6 mds. and this could have been raised to 3.6 mds. so as to equal the crop from A (continuously manured) by raising the dose applied in 1932 from 40 lbs. nitrogen per acre to $36/26 \times 40 = 55$ lbs.

If therefore crop were not wanted in 1931, but were required in 1932, it would pay to drop manuring for a year, and then increase the dose.

When manuring is stopped for two years it is interesting to observe that there is still a significant residual effect from the manuring with the soluble sulphate of ammonia.

	1929.	1930.	1931.	1932.
No Manure	7.25	6.65	8.83	7.96
Manured in 1929 and 1930 not in 1931 and 1932 ...	9.60	9.54	10.30	8.99
Gain ...	2.35	2.89	1.47	1.03

There is no need to fear that bushes will be left in worse condition if manured for a time with soluble artificials and then left unmanured.

The losses compared to continuous manuring are :—

1931.	1932.
2.40 mds.	3.61 mds.

The losses compared to continuous manuring are increasing and it is probable that in 1933 there will be little difference in crop between the plots never manured and those manured in 1929 and 1930. If crop equal to that from containuous manuring were required from these latter plots in 1933, about 80 lbs. nitrogen per acre would have to be applied. And with such a dose there would be some fear of loss of quality.

Still it is clear that if areas are allowed to deteriorate for want of manure, they can be restored to full yield whenever the market justifies it; so long as the tea does not deteriorate to such an extent that recovery is difficulty and expensive. The establishment of shade trees would remove fear on this score.

In the event of restriction, therefore, it is considered sound to reduce manuring to the quantity estimated to be necessary to produce the crop required. If manuring is stopped or restricted, reduction of yielding capacity is, of course certain. For a time this may be masked by increased efficiency of cultivation or plucking; but, if so, it will be all the worse when it appears, since more will have been taken from the soil, or from the reserves in bushes.

MOSQUITOES AND WHAT TO DO ABOUT THEM.

The *Statesman* for the last two years has been drawing attention to the introduction into Calcutta of a malaria carrying mosquito known as the Anopheles Ludlowii. This is good work in a way, as must be any propaganda directed against the scourge of malaria. It is difficult to fathom what is at the back of this propaganda. It is true that the A. Ludlowii is a most dangerous anopheline. But he only breeds in brackish water. It looks like a newspaper stunt, but as it is in a good cause let it go at that, and let us hope it keeps people on the alert.

But who cares what the mosquito is that gives him malaria. Sufficient with the day is the evil thereof. The two specimen of mosquito that have to be dealt with in Calcutta are the "Anopheles Stephensi," a most dangerous carrier of malaria and "Aedes Aegypti" (Stegomyia fasciata) the carrier of dengue and yellow fever, and the most vicious biter of all mosquitoes. Well there is the enemy; we know him and his habits. What is to be done? A shop keeper once put up a sign that supplies a key to the situation. It read:—"The Lord helps those who help themselves. But the Lord help those found helping themselves in this establishment." Rejecting the second half of this dictum let us see what we can suggest to our readers as to the best way to help themselves.

It would be a good plan for householders to band themselves together and get a good Malariologist to instruct them what to do. The writer will be glad to help any who care to correspond on the subject and he will obtain the services of lecturers for the purpose.

Now here are a few points which should be noted and any householder who follows out these instructions will be doing the greatest possible benefit to his family and surroundings. The instructions are for dwellers in the cities which have a water supply.

Overhead cisterns are the greatest danger in cities and are responsible for more malaria carrying mosquitoes than any other source. They should be treated as follows:—First of all they should be covered with sheet iron or cement concrete. Corrugated iron must not be used. The man-hole should be circular and provided with a cap cover fitting over a *ring round the opening*. The cover of the man-hole should be kept locked. Inlet pipes should be fitted with check nuts and should never enter the cistern through the man hole. Overflow pipes should be provided with a perforated cap of brass or copper. The use of valve boxes should be discouraged as their covers are rarely, if ever, mosquito

proof. The cistern should be cleansed by a plumber once every six months and the inside whitewashed at the same time.

Having settled accounts with the cistern which once done is automatic in action, we come to more personal matters. Now here is a suggestion. Why not get some member of the household to take on this duty as a pleasant occupation. If left to servants it will never be done. Every part of the house and compound should be carefully inspected for sources of mosquito.

Every pool of water however small must be swept dry. Have a sweeper with you and see that all jobs are done at once and efficiently.

The tops of drains where water collects must be disinfected with a good saponified cresol. Cyllin is good, but should not be used in large quantities; it is most economical really. An efficient mixture is half an ounce to a gallon of water.

Chaubachas should be completely emptied once a week; also water houses used for washing motor cars. These are most dangerous when neglected.

All disused tins and earthen pots should be thrown right out of the place. Empty tinlined cases are a fearful danger. No one takes any note of them. The rain fills them and they become mosquito soup. Every possible object that can collect water must be inspected. The small earthen-ware water-carriers used at the bottom of almirahs &c. as a protection against ants are a great source of danger. They should always contain a milky solution of saponified cresol. An empty jar or box on a roof can emit enough malaria carrying mosquito in a week to infect an army.

Fire buckets should be filled with sand, or if water is used it should be mixed with cresol. But sand is better.

Fountains should only be used when they are constructed so as to drain completely when out of use.

If this work is done conscientiously two or three times a week, or better still daily; there will be very little fever of any kind in the house. Life will be pleasanter and the absence of sickness most noticeable.

The tulsi plant is very useful for keeping away mosquitoes. They seem to dislike the basil perfume of the leaves. There is more behind the mali's love of the tulsi plant than meets the eye. Possibly its usefulness in warding off fever has something to do with its sacred character.

In a later issue we will deal with the problem of msquito destruction on a large scale necessary in the mofussil. It is a big subject and requires space in itself.

LARVACIDAL FISH AND MALARIA.

One of the great handicaps that besets the work of the planting community is Malaria; which is practically always present; reducing Tea labour units by a permanent percentage. Measures should be taken to prevent the breeding of mosquitos. Particularly, the mosquito larvae will have to be destroyed. An interesting method of dealing with mosquito larvae is larvacidal fish. The following may be recommended.

Chela, Rasbora, Barilius, Haplochilus and *Barbus.*

Once the species for use has been decided upon the rest is easy. It must be borne in mind that opinions differ widely on the subject of this method of mosquito destruction. It is quite likely that efficacy varies with localities. In any case it is worth trying, for if successful it is cheap, automatic and continuous.

The *Haplochilus* is probably the most useful larvacidal fish. *H. panchax* (piku) and *Analias Scandeus* (Khajina, the climbing perch) are used in the wells in Bombay for larvae destruction.

WORLD OF INDIAN FINANCE

Calcutta, November 3.

There is no appreciable change in money conditions, which continue easy at ½ per cent. The reason is simple, that the market's resources have been unaffected either way by the operations of the Treasury. There has been no inflow of funds on account of sterling purchases, as the week's tenders have not resulted in any. Sales of Treasury Bills have more or less cancelled the discharges during the week; and the only difference made by the sales of intermediates of Rs. 32 lakhs, which is in favour of the Government, is inconsiderable from the standpoint of monetary conditions as a whole.

The deterioration in the Treasury Bills position both on account of the rate payable by Government and on account of weekly sales by tenders and by intermediates has been proceeding apace during the last three weeks. The average rate of accepted tenders has been steadily on the increase. Though the last communique of the Controller of the Currency shows an increase in the sales of intermediates from Rs. 3.75 lakhs to Rs. 32 lakhs, the increase is of no consequence to the ways and means position. And if it is remembered that this was all that the market was prepared to take, in spite of the inducement contained in the increase in the tap-rate from Rs. 1-2 to Rs. 1-6 per cent., it may be supposed that interest in Treasury Bills has not been revived to the point at which Government could feel easy about their commitments in the near future. Likewise, the total volume of Treasury Bills tendered on the auction days has hovered about the limit of Rs. 1¾ crores; and though the weekly sale is limited to Rs. 1½ crores the fact that tenders have been nearly equal to the amount on offer from the Government shows that the ways and means position in the coming weeks involves some nice questions of adjustments for the authorities to solve.

The last published statement of the Imperial Bank of India shows a drop of Rs. ½ crore in the ways and means advances of the Government on the previous week. But this is no indication of the comfortable position or the amplitude of resources of the Treasury. It has to be remembered that the week following the one covered by the statement of the Bank includes within its scope the beginning of the month and that, therefore, the more pronounced needs of the Government are not reflected in that statement. We may now try to make a fuller survey of the Government's ways and means position as it will stand in the coming weeks. In the first place, the total maturities of Treasury Bills during the month minus what may be presumed to have been discharged by now, may be put at about Rs. 9½ crores. To this we have to add about Rs. 2 crores necessary for the Government's expenditure in the beginning of the month. We have also to provide for the purchase of sterling during the period of November. In this, we have to take into account of a possible fillip to gold exports consequent on the announcement of America's intention to purchase gold in foreign centres. It might well be that gold exports, which of late have shown a tendency to sag may receive a temporary fillip from the expectation that, as a result of the American offer of purchase, increased prices might be available. We may, therefore, provide for purchases of sterling during the month to the tune of £3 million which will require a provision of Rs. 4½ crores in the ways and means budget for the month.

Against such liabilities the income side make but poor showing. From the manner in which sales of intermediates have been effected during the last few weeks, there is no reason to suppose that Government would be able to rope-in appreciable amounts by this means. The only dependable source is the weekly sales by tender, which have necessarily to be limited to Rs. 1½ crores a week. This has to be supplemented by surpluses carried over current expenditure. It is a matter of common knowledge that only the first quarter of the calendar year is a period of appreciable revenue surplus; and even if such a period should make an earlier beginning November would not be covered by it. The authorities, therefore, cannot set much store on revenue surplus; and it will be obvious from this that the policy of drawing on the Imperial Bank by way of ways and means advances will have to be persisted in through the month. The statement of the Imperial Bank which will be published next week can be relied upon to

show a substantial increase in the ways and means advances of the Government.

In the light of the facts stated above, the Treasury Bills policy of the Government acquires a new importance. The Government will have to concentrate on intermediates as the only source of incoming, which can be deemed to possess a degree of elasticity; and their policy in this regard will have to be determined with a proper balance between the immediate objective of expanding the weekly sales at the tap-rate, and the more distant objective of maintaining the credit of the Government in respect of their short-term borrowing. The Government have made considerable advances towards meeting the market's requirements or demands regarding the yield on Treasury Bills. The average rate of accepted tenders has gone up from As. 14-10 on October 4 to Rs. 1-9-10 during the week under review. The tap-rate, also, has advanced from As. 13 to Rs. 1-8. That at these rates more appreciable sales have not been effected is sufficient reason for Government taking a yet further step. But the policy of weekly increases in Treasury Bills' rates has its obvious dangers. No one would suggest that owing to insistence of the needs of the Government for cash in a short period the rate for short-term borrowing should be indefinitely increased. Sooner or later a point must be reached when Government should cry a halt to this retreat. We suggest, and we believe that it is probable, that Government will stop as soon as the rate of Re. 1-12 per cent. is reached, irrespective of whether the Government are able to get more money at that rate or not for the rest of November. If these additional inducements should fail to attract money from the market in sufficient amounts, the Government will have no course but to rely on the Imperial Bank and increase their ways and means advances.

There is one alternative to ways and means advances which might be referred to in an examination which aims at some degree of completeness. It is worth while considering the possibility of Government effecting a transfer of sterling funds through the Paper Currency Reserve for replenishing Indian balances. The temptation to adopt such a course is only too strong as the position of the Home Treasury is now very comfortable. The funds, which have been made available to the Secretary of State, taking into account the opening balance of the Home Treasury at the beginning of the year, the proceeds of the 4 per cent. 1948-53 sterling loan, and the remittances effected during the course of the year, are nearly half as much more than the budgetted programme of remittance for the year. In these circumstances, it may be thought that to draw on the Home Treasury balance to tide over a temporary squeeze in the ways and means position in India has nothing to be said against it. But the danger of such a course will be to stress the ease already existing in the exchange market.

The securities market continued to be influenced by the activities of the bears till the middle of the week. Apparently on account of a little squeeze for Paper, the price of 3½ per cent. improved yesterday and to-day a still further improvement was noticeable in the closing hours. As a consequence, the drop of As. 12, which took place between last Friday and Wednesday, has been fully regained. The undertone is steadier at the close of business, and, at the moment, the market seems to be rid of the influence of bears. This, however, is more cause for satisfaction as the market has discounted, to some extent, dividends in certain jute shares due this month. Unless some support is given either by interested parties or by the bulls, no marked rise is likely. The reaction from bearish influences will continue for some time, and in the absence of any fresh adverse developments the giltedge market should continue steady, though without recording any hectic rise.

Exchange is quiet because of the paucity of gold shipments and in the absence of bulls. If, as observed earlier in this review the American talk of gold purchases outside materialises, we should see a spurt of fresh exports here with a corresponding strength in exchange.

The closing rates are: 1s. 6d., T. T. available up to February; 1s. 5 31/32d., March-April-May T. T.; and 1s. 5 15/16d., Monsoon months T. T.

Bills may be quoted: 1s. 6 3/32d., up to March and 1s. 6 1/16d., April-Monsoon.

Money was easy with lenders plentiful at ½ per cent. Onemonth Twomonth and threemonth deposits were quoted 1, 1¼ and 1½ per cent. respectively.

OTHER INDIAN MONEY MARKETS

(By Wire)

(From Our Correspondent)

Madras, November 2.

The exchange market has been dull throughout the week with banks being general sellers at 1s. 6 31/32d. T.T. for any position this year. On Tuesday several banks offered to sell ready at 1s. 6d. without attracting buyers. Three months sight bills are quoted at 1s. 6 1/8d. but could probably be placed at a slightly lower rate. Transactions on either side of the book have been trifling.

Money remains fairly easy and borrowers of inter-bank call money have been able to obtain all their requirements at 1 per cent.

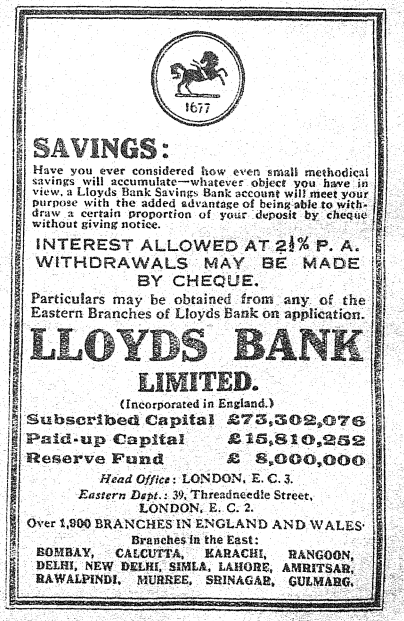
In spite of the reports of the conclusion or the imminent conclusion of a currency truce between Great Britain and the United States—and these reports were circulated as from the middle of the week—the exchange markets do not seem to have benefitted by way of any decrease in the prevalent instability. One would have thought from the report of the agreement that some degree of steadiness in the principal exchanges would be visible during the week, though it is not to be expected that the agreement would be given effect to so soon. But the fluctuations in the exchanges are easily explained in the light of the uncertainty attaching to every principal development. President Roosevelt's announcement of effecting purchases of gold abroad at stated prices has brought about a situation in which there is a general anxiety to force the pace of events. Considering the uncertainty and suspense that have ruled in international finance since the failure of the World Economic Conference to arrive at an agreement on stabilisation, and considering also that the monetary policies of the Recovery Administration in America were in a very hazy state, one has to welcome every sign of precipitating matters. But beyond the feeling that President Roosevelt's announcement and the report of an understanding between America and Great Britain must sooner or later lead up to the reclamation of the world from the prevalent chaos, there is nothing certain. Not to speak of the objective of Mr. Roosevelt's gold policy, it is not even clear whether any amount of gold purchase has been effected so far in behalf of the American Government by the Reconstruction Finance Corporation. The President of the Reconstruction Finance Corporation publicly announced the other day that the Corporation would buy gold abroad at definite prices which would be published every morning. But the reports from London show that none of the gold available in the London market has been taken up by America, the week's sales being accounted for by Continental purchases. But it is shrewdly suspected thta America is buying francs in the London market and using the francs for purchase of gold from the Bank of France.

Meanwhile, the official price of gold has been announced from day to day and has shown a tendency to rise. This is only natural as the gold policy, far from implying an abandonment of the schemes of inflation of currency and deflation of the dollar, is only meant to be an instrument thereof. It will be remembered that a report in the middle of the week pointed out that the aim of Mr. Roosevelt is to gradually increase the dollar price of gold to the point at which it will mean a 50 per cent. reduction of the gold content of the dollar. The announcement of the gold plan has emboldened the silver interests to re-emphasise their claims on official monetary policy. Senator Pittman declared that President Roosevelt should also consider the question of increasing the price of silver and that, if he fails to do so, he would himself bring legislation to that effect in Congress when it reassembles in January and that, for his part, he has not the slightest doubt that his bill could be passed by an overwhelming majority. The principal proposal in his bill would be the free coinage of silver at a ratio of 16 to 1 to gold.

So far as Mr. Roosevelt is concerned, he might think that it is yet a long way off for Congress to meet and that, if during the interval he succeeds in making a substantial achievement in respect of economic recovery and monetary understanding with the nations, Congress would be less inclined to interfere with the Recovery Administration than Senator Pittman has reason to suppose. Such an attitude may be dictated by the barest necessities of the domestic situation. It is unfortunate that, just when Mr. Roosevelt has summoned courage to act decisively and in a particualar direction in respect of his monetary and exchange policy, his political opponents should have chosen to set afoot a big campaign against the party in power. It is reported that the Republican party is now issuing pamphlets which seek to bring out the strong contrast between the election manifestos of the President and his present purposes. There is, no doubt, much in the manifesto which is apparently at variance with the economic Policies now pursued by President Roosevelt. For while, in the former, Mr. Roosevelt advocated an international monetary policy and understanding with the other nations and sound money at home, he has now cut adrift from other nations and given America a lonely plough to furrough. The answer to this charge however, can be clear only to those who realise that the present is only a stage in a lengthy programme and that the question whether, Mr. Roosevelt has kept faith with his election promises can be judged only after he has had a reasonable chance to complete the present experiment.

To return to the question of the possibility of agreement, we have observed that the instability of the exchanges of the week does not seem to confirm the report of an agreement between great Britain and America. But towards the end of the week, it has been hinted that the main circumstance which makes such agreement possible is the consent of the American President to reduce the limit of deflation for the dollar and slow down the pace of such deflation. On this basis, a tentative working agreement is not impossible. On the one hand, President Roosevelt might agree to make such gold purchases and in such a manner as would not upset British trade. On the other, Britain might agree to allow purchases to be made so long as the rate of depreciation and the extent of depreciation in the dollar are not too great.



NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3½ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opend on Tuesday, October 31. The total amount offered was Rs. 1,82,00,000. Tenders at Rs. 99-9-9 and above were accepted in full and those at Rs. 99-9-6 were allotted approximately 90 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 1-9-10 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, November 7. Successful tenderers should make payment on Friday, November 10. Other conditions are as usual.

Three months intermediates will be sold from November 1 to 6 at Rs. 99-10 per cent. subject to the conditions previously announced.

Three months intermediates sold from October 25 to 30 amounted to Rs. 32 lakhs.

STERLING TENDERS

The Controller of the Currency in a Press communique says that there were no tenders for sterling on Wednesday, November 1.

£1 million will be offered for tender on Wednesday, November 8, on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.
